## Star Cycles

The spotlights of a holographic sun focus upon that which is supposed to be seen. For those of us who keep our distance in the shadows, the illusionary reality being imprinted upon the unsuspecting masses is quite noticeable to see. For those of us who remain blindsided by the immense presence can barely see anything outside of an increasing army of light and remain encompassed by the ever persisting conquest. If anyone would be foolish enough to stand in the way, they would easily be melted away by the magnified and focused carcinogenic rays of radiation. After this death, however, is where the story begins because in order to be as free as a spirit who is forever born you must be like a ghost who is truant in the eyes of the sun.

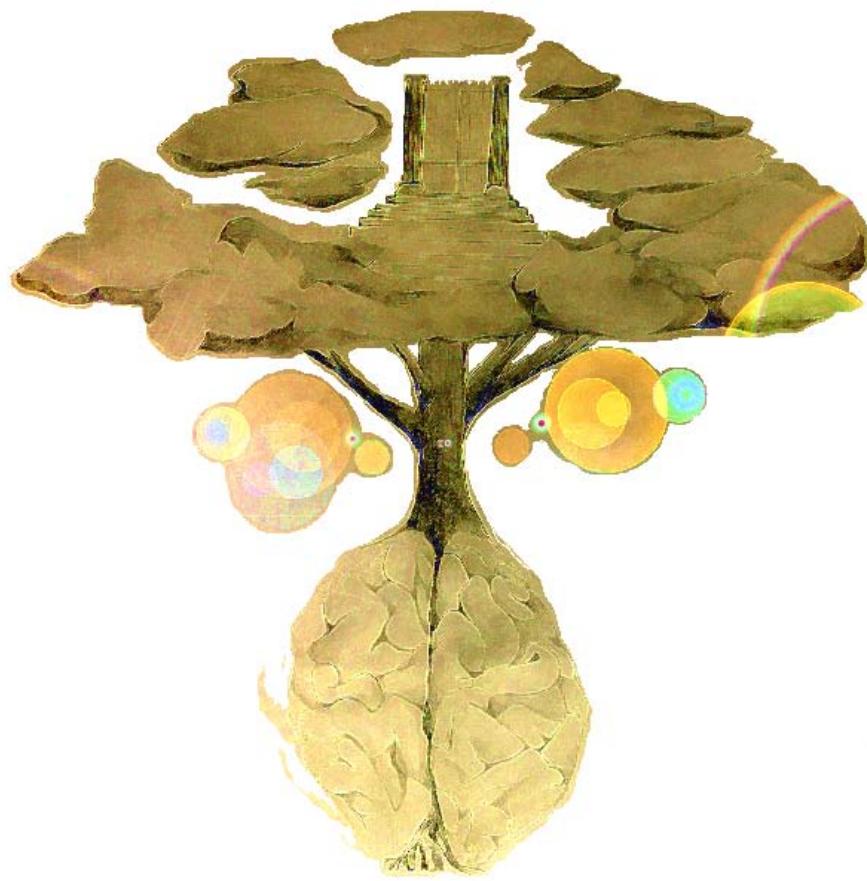

If one wishes to escape from the prison of common sense and the inanity of popular opinion, one must first be open to anything possible, especially that which goes against the grain of what one believes. Having a truly open mind without preconceived sources of judgment revitalizes the learning experience altogether. Unlocking the concepts in this collection of thoughts will hopefully help propel the senses in an effort to envision past the painted windows of reality and into the eternal fields of the unknown. Whether or not this is a good thing is up for you to decide. The suggested planes of existence beyond the many realms of possibility may just be a wishful thinking dream, but this self-manifested vision has yet to be proven otherwise.

### Just remember...

Sight can blind you  
Touch can harm you  
Sound can deafen you  
Taste can poison you  
Smell can weaken you  
Thought can provoke you

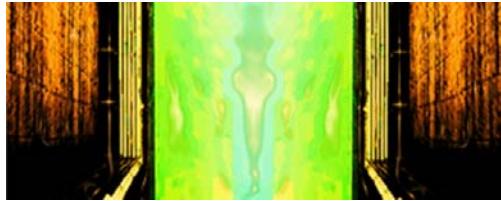

So...

See not with thy eyes  
Touch not with thy skin  
Hear not with thy ears  
Taste not with thy tongue  
Smell not with thy nose  
Think not with thy brain

### *Treasure Thoughts*

*Attempting again to what may have already been done long before, trying to pick the lock to the keyhole of the cosmically conscious door. Only an anti-matter of time until our leaves of thought evolve and branch out further than the incandescent dreams in the sky. Each leaf obliged to new heights, each like a string-less kite floating among the wind of the truth of the wise. When adjusting the focus on new envisioned lens certain portals of thought treasures might be summoned about from perspectives within. Once the gateway to the infinite becomes opened, the tainted versions of reality will be cleansed of all of the impurities and sins. In the cosmic initiation, just like a circle, the end is always where the cycle begins.*

## The Gateway

Outside of the gateway I had been  
To abide by the authority of time's keep  
And as a witness to the separation of peace  
Where light separated the ghost from the shadow  
The ethereal body had turned back into material

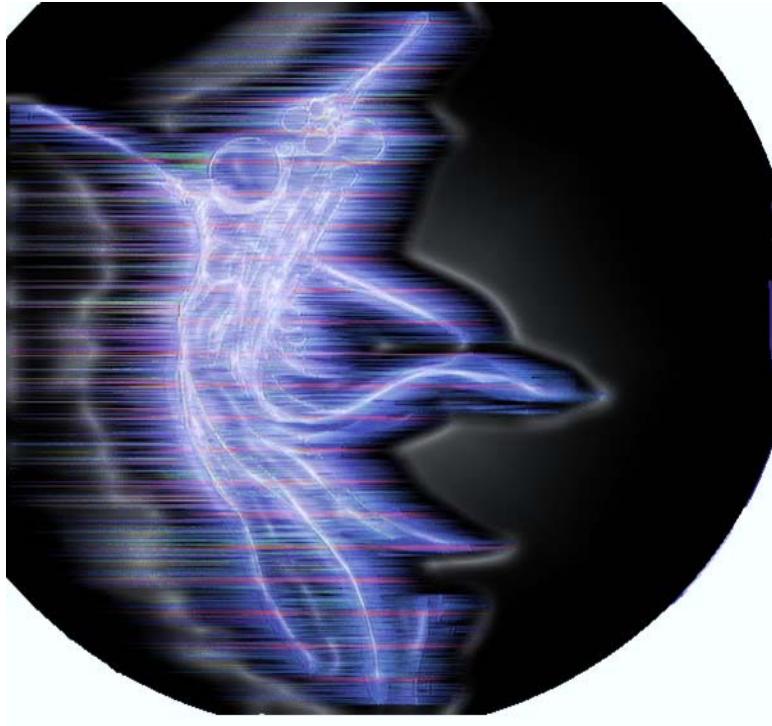

I reflected...

Cleverly bounded to an age of wonder  
Armed with mere limits of a sinful mortal  
I carefully watch with keen skeptical vision  
Beholding a new age where I will die again

Into the gateway I have now returned  
Purging out the center of an analog clock  
Sensing how the mechanical arms wither off  
Where shadow and crystal transform back together  
The material body has turned back into astral

I echo...

Becoming the eternal one and zero, the full circle  
With a reckless endeavor to influence by example  
So that even in the most dire and darkest hour  
May we be able to forgive and let this past go

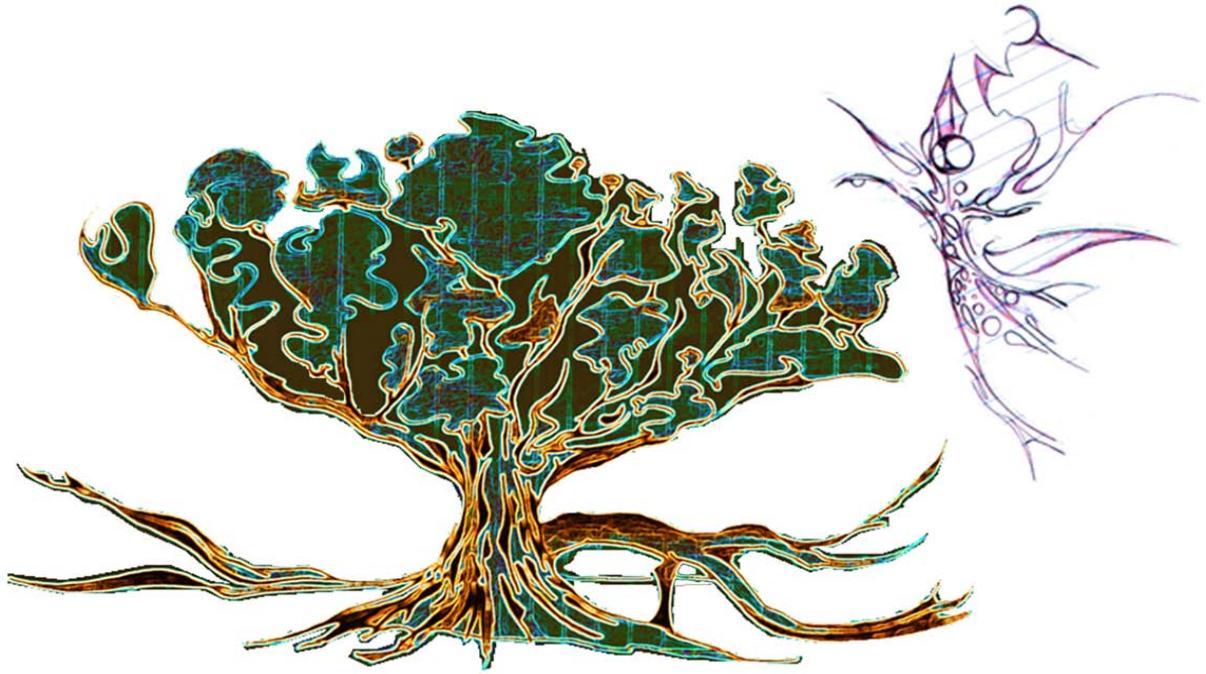

## Imagine I'm a genie

For the purpose of directionless change and to reinforce the awaking new collective sense, I share this with you. The meaning of my being is to culminate perfections within the growing boundary of my mind. The choices I create, assisted by a consistent systematic train of thought will help me evolve the standards and limits of my own comprehension and self-control. Before moving on to the next plane of existence, I choose to share the thoughts which will lead the way. Our views may attract and repel each other due to our beliefs, but do understand how this collection of thoughts is about unbounded possibilities existing both beyond and within ourselves. This is a surrealistic dream where eternal exceptions exist and where the polarity of this and that are not separated from each other, but are instead united as one with the shape of a zero.

In this circular book there are many overlapping tiers with many angles. The first section (Introduction) is a collection of the first written hopes to this dream. The second section (*Oneiszero*) is an attempt to convey the universal law of exception. The third section (Space) tries to map out the initial blueprint of what is scientifically known. The fourth section (Time) details the measurements of time as we know. The fifth section (Consciousness) starts to describe the biology developed within that time. The sixth section (Afterlife Insurance) speculates several different kinds of spirit kingdoms. The seventh section (Missing Chapters) hints toward the lost records which would resemble the empty spaces on the time table of the world.

Together, these seven sections are the primary body of this book. These sections attempt to outline the scope of the All. If all manifestation were organized in simplest form, repeating patterns of circles is the presumed design. The wheels of eternity, a generic name of sorts, is the fusion of operating circles which includes, space, time, and consciousness. The speculated possibility of what exists before and after these circles leads to a range of spiritual dimensions and frequencies. A guessing game this is, when trying to fill in the blank circles of the mysteries of the universe. The eighth section (to play a joke on the gods) is the reflective encore, a collection of words and images compiled together to form the epic poem which concludes this work.

The core meaning of this book can be detected in between the many lines and traveling completely around the edge of this circle will reward a much clearer view to the whole. These bits and pieces may lure you deeper toward the center of a black hole and if you follow the gravity all the way through the depths, you will inevitably end up on another side. Striving for an answer to relate to all forms of awareness and every notion of order and chaos is not something that will be easily understood or accepted, but none the more, this is a project to visually see what I have already built in my head.

### **Let us first muse upon a metaphor, we are all trees**

We begin as a seed, representing the birth, spawning into life from the dirt of the Earth. The connectivity of our roots varies depending on the environment where we grow. We are the simplest of consciousness, barely aware of each other and completely unaware of ourselves and as much as our appearance differs in shape, size, and bark, it's as though we could care less. We all sense how we belong to the same unnamed source even though we have been grown separately into several types of families and groups.

Our world's communities of trees, each one like a puzzle piece in a grand picture, belong to a network of chemical communication relaying a form of sense to each other in order to populate in abundance. Each of us depend on the same systems of air, light, water, and each other to function properly as we all contribute ourselves unselfishly to a nameless order of nature. The directions of our branches, the different ways we reach into the sky are the dreams we create. The symmetrically-shaped color changing leaves are the thoughts and ideas that marvel, fall, and fade away with the seasons of the weather. For every thought undefined by language within us is as perfect as the leaves falling off our tree and no matter how far they may travel away from us once we forget them, they will forever remain part of us since they originally were us.

In the moment of our own self-realization when we understand what we really are, we become what we help create, the eternal Oneness which embraces all things unconditionally without division and separation. By the will of ourselves we can push the envelope of possibility even further to produce the art of fruit. The various types of fruit harbor seeds with more opportunities to birth new art. This hectic, yet simple cycle of death and renewal is also subject to a multitude of other ailments completely out of our own control, yet we still manage to survive, strive, and prosper. What may have once been a dead rock floating aimlessly around in the loneliness of space has now converged with the elements of anarchic randomness into a breathing and oscillating life force of its own wielded by both temporal and everlasting energy machines who together support a concept of life.

How much more would a nature's accident like this evolve into without any forms of outside interference? The birth of further and further complexities to a degree we could only begin to fathom. Chaos, complete chaos, yet these layers of creation remain perpetual miracles in a repeating and sound structure. Would it even be worth trying to figure out the origins of reluctant knowledge that further fuel our own curiosity, rather we appreciate and be merry in our own leaves, thoughts and ideas? Excited I am of what conclusions this may bring, a literal question of trees who dream, and then to think of the unthinkable age of the animal kingdom, the domestic, the foreign, and the alien.

### **So this is a consequence of thinking too hard**

The self-aware aspect of being alive makes life seem a bit more complicated when thinking what all of this is about. The life of a tree is simple in comparison, neither a truth seeker nor a pleasure seeker, a tree just is. Fortunately to some and unfortunately for others, humans have the abilities to strive and accomplish like no other species to our common knowledge. With our limitations presiding in the forefront, the boundaries are as far as our comprehension can reach. Creating our reality is based on our own constructive ability to do so as well having the slightest ambition to stretch beyond the horizon of what is considered possible.

As we experience the ongoing creation of our conscious entity, every thought, decision, and action will make up the trail to our individual pathway. Throughout the course of any life, new trails will be made and old trails will be upgraded. How we decide to construct our pathway is consciously decided by our own willpower amongst an assortment of controllable and uncontrollable variables. During our travels, our emotional viewpoint generates the select colors to the backdrop of a transforming landscape and every part of our aged and lengthened pathway becomes a unique experience spawned by a combination of special circumstances.

Since traces of existence roam around in familiar fields, the corresponding trails of our human pathways eventually become habitually used roads with similar trampling perceptions. Abnormal quests are the paths less taken, the lonely and deserted roads generally placed in the middle of nowhere. The paths most chosen are the quests for fame and material success which would mimic the over-populated interstate super highways, continually racing in competing patterns. While difficult to generalize a lifetime of decisions into the shape of a single path, the elapsed intention of a conscious being would go to show an overall segmented difference. Ideally though, all adventures will eventually lead back homeward to the original place of comfort before any adventure started. An example for a place of origins would be something like the center of a crystal sun, which here represents a universal substitution for a place called home.

Truth is often recollected as an intense feeling rather than a collection of words. What truth is of course varies depending on who you talk to. Many types of proof can be absorbed in many kinds of ways. We are subjected to decide these evident notions for our self because one person's truth is often another person's lie. There is no ultimate law stating what is true and what isn't true. Truth and perception is like comparing a rainforest to a single leaf. Truth is a collection of all of the leaves, all of the unique thinking perceptions. As a single leaf is to a rainforest a rainforest may be to a planet, and what a planet is to the galaxy a galaxy may be to a universe. The definition of truth would have to be explained with all of the layers included, described in a way to clarify all of the terms. There will always be additional room for sufficient resources to validate the limitations of truth. When all is said and done there will be much more left to be said and done.

### **Speaking during the grace period of a moving shadow**

Recreating the jig saw puzzle of the All into a lone jig saw puzzle will show you the art of yourself. What the All is can only be wondered and shared upon between conscious and able beings. If you were to imagine the boundary of your beliefs as the frame of a jig saw puzzle, then note how being born into any kind of culture is like being born with an assortment of starter-kit box sets of beliefs. Inside the frame of the puzzle would be the pieces which developed into a structured and / or unstructured lifestyle and thinking outside of the box would be somewhat like opening your mind. When deciding on what we want our picture to look like we add and remove as many puzzle pieces as we please and anything which does not seem to fit within our picture can easily be left unconnected. A picture of the All is practically non-existent to use as a reference guide as well as any corners which would help frame in an infinitely ranged ever expanding jig saw puzzle.

The dividing lines of the world have many instances for why certain puzzle pieces do not fit together with each other. Social class, culture, ethnicity, religion, belief, age, appearance, color, sexual orientation, location, size, gender, and other foundations of separation are the lines of the puzzles pieces which divide us from each other as a whole. Dozens of generations of conflicting groups are continually built out of the molds of prior castings and this pattern is constantly repeating. In our world, in our mutual reality, there isn't a constructed picture everyone can agree on. Instead, we figure out separate puzzles with different pieces, frames, and pictures creating many parallel ones with many conflicting agendas.

Different groups compete with each other over the idea of the grand picture in many various kinds of formats. The sense of belonging and the feeling of being accepted into a group also brings along the price of defending any perceived attack on that shared foundational jig saw puzzle. True freedom involves sharing the infinite with the unknown as well as understanding the equal rights for all possible forms of energy. Any attempt to stifle another automatically shows the evidence of an imbalanced portion. Progressive human integration by the mutual means of equality, honesty, trust, care, compassion, and love is a shrouded myth not often accepted by ourselves, let alone a merciless world. Even though a serene utopia is not supported by plausible factors, the constant effort will always be in the vision of a like-minded dreamer.

In the meanwhile, searching through the branches and leaves in the tree of eternity is only restricted by our own thirst and hunger for what we choose to be apart and a part of. Solving a mild puzzle is easier for sure, but the easy way isn't always the most beneficial way. The confusion inherited from absorbing unfamiliar information is only temporary if you have the will to sort out a more complicated picture in pursuit of a much clearer picture. Visualizing the interconnectivity of these multiple jig saw puzzles is, to an extent, an automatic mechanized thought process we already do every single day with the processes of our subconscious and unconscious mind. If this crescendo of self-conscious experience is the assortment of putting together a grand puzzle from birth to death, then our thoughts will shape and create our truth and reality in this ongoing life as well as possibly the next. The end result is by preference and how we decide to think is an art form stylized by our own lines and colors.

### Ultimate synthesis

The pattern of any puzzle piece will always include a theme of dual polarity. Even the smallest puzzle pieces consist of dualities. These dual natures, when composed in combination, construct larger forms of energy with mimicking charges. The facets of energy which seem to operate on a system of positive and negative are all relative. Since all the puzzle pieces relate to relative polarities, all the known pieces would essentially belong to the same family of energy. Whether birthed from a singular point or not, the polarized collection of the totality of substance can be viewed upon as an interconnecting jig saw puzzle made out of a countless collection of circles. A picture of the All would go to show how all the puzzle pieces are each individual circles and then would show how all of these circles are interlinked together.

Instant visuals come along with interpreting certain words. Thinking of the word ‘circle’ conjures collectively somewhat neutral visuals, but words like ‘angels’ and ‘demons’ are sure to spur up many other kinds of mental depictions. Conversely, the word ‘eudemon’ is defined to be a benevolent and good natured supernatural entity. Opening up the layers of meaning in what a word could mean is only the start to this story. Unifying the duality into one and realizing the correspondence of opposites leads to the end of the story. The aged old lesson taught from the ancient breath of mystic alchemists hasn’t changed much. Fusing the identities of both the positive and negative affiliations has always been the aim and the goal of balanced thinking minds. The added assertion of balanced minds would then simply state how setting aside differences for the sake of true equality is the mature method for the evolution of consciousness.

The ‘good’ and ‘bad’ conscience archetypes standing on each shoulder and trying to whisper into each ear is another constant form of duality. Balancing and connecting both sides with fair mediation helps develop a mindset for healthy contemplation. Blending together with the shadow self, accepting the creature of ourselves including all the negativities, the fears, the flaws, the inconsistencies, and the unknowns, begins the ability of honest self evaluation. Transforming a shadow of dark into a shadow of clear begins by taking an astral step backwards to view the delusional battles of pride and then consciously transcending the grid of surrounding echoes. Appreciating every tiny fiber of existence, every shared fragment of atmosphere, and every particle of energy is a choice any may partake and revel in as is the same with admiring any part of the All. Alternative methods include the constant picking and choosing of the better and worse for the many specified selections. The balanced whole would appear to rely on no such system of elitism, while presumed to be unequivocally content with the continuous unbiased universal operations of the infinite.

*Oneiszero* simply represents the unification of all comprehension. This expression is the simplified formula for everything and nothing, credible by its own merit in the conclusion which will come before the beginning. *Oneiszero* is the basic premise for the philosophy behind the understanding of the mechanics of the wheels of eternity. This theory implies how the labyrinth mapping out the blueprint of the unknown would repeatedly circle together in notions of infinite regression. Like a doll house within a doll house within a doll house repeated ad infinitum, the protocol would outline every single tiniest part to be nearly identical to the larger, the largest, and the whole parts. The question then becomes what would a picture containing the sum of all history, all consciousness, all creation, and all measurements of time look like? An overall collection of interconnecting circular jig saw pieces will be illustrated throughout the course of this work.

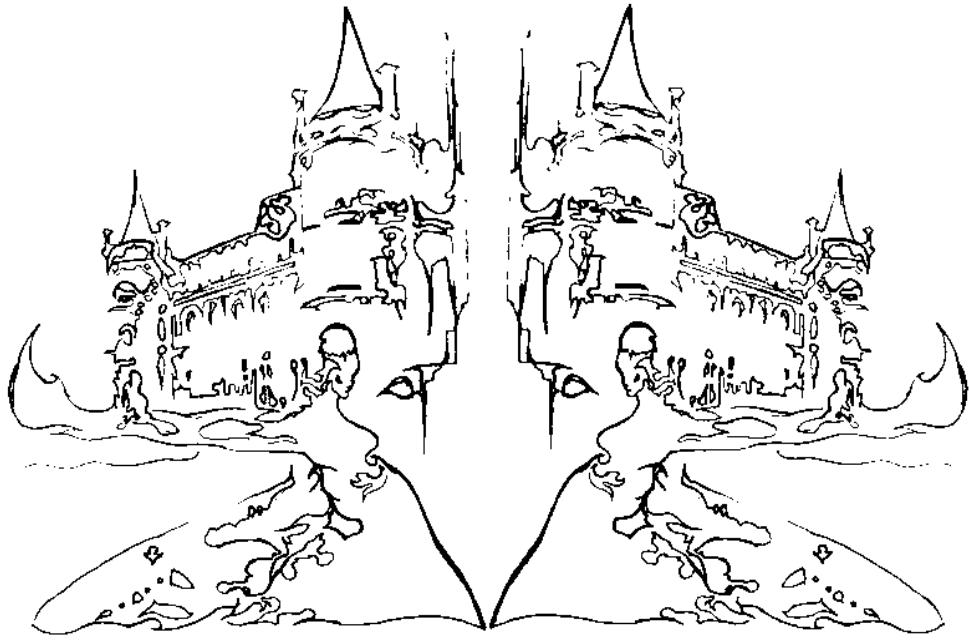

### Untapped ideations

The framework of our being is structured based on our individual ideation. Our thought process is built on a system of belief and intention, aged with concrete ideals and sensitive to change depending on any given situation, but yet as free as we want to be within the capabilities of our own mind. How could I begin to explain the circumstances, memories, events, and environmental effects which would help to construct anyone else's psyche when I can barely and only judge my own? Who can really judge anyone about the absolute reality of life when the definition of absolute reality is still quite undefined? The proof and evidence for any theory is debatable and all of this collected knowledge is a series of theories stacked on theories stacked on more theories.

Putting together these pieces of a universal puzzle is the most complicated project I have ever attempted to assimilate. Disagreements may arise as they commonly do so we can further understand the contrast of our opinions and terminology. I am neither an expert, nor a specialist, nor am I a professional in any field, but I am still going to map out what I observe, ever mind the polarity of what is right and wrong. If our imagination is as real as our dreams, then reality is only a dream with restricted possibilities. The epic battle of free will versus free fate rages on as the participants fight over the authority of something they cannot control. We can either choose sides, nor partake at all, or build a new side-less side altogether.

A wonder it is if these deep thinking internal quests will eventually lead to the opening of mental treasure chests. Our natural cynicism, when coupled with the limitations of our senses, will usually demean any possibilities which are not so obviously evident. Our natural intuition on the other hand, when coupled with the wider limitations of our mind's eye, will usually uplift any reality which is too adherently strict. Figuratively, each one of us is a unique circle shape shifting with many fluctuations through a vast number of spectrums full of hidden colors. The waking power inside of a single nucleus retains the force of nuclear power. If we were to unlock and unleash this power within us, who knows what could be accomplished let alone what could be deemed as possible.

In human tradition, the idea of perfection has come to be highly under rated and misunderstood. The word has been traded off for a shallow concept, for empty material within a common sense of collected minds. Like the precision of halos and horns, perfection is infinite and is ever-changing, perfection is chaotic and can only be barely understood. Just like our ugly selves with all of our flaws and sins, still perfect. The unseen brilliance of our true potential which would only begin to indicate the potential of our consciousness is barely seen at all. Only with certain experience can certain frequencies of feelings be shared, expressed, and contrasted. One should keep in mind how the feeling of true unconditional love is the rarest of all conscious human experience.

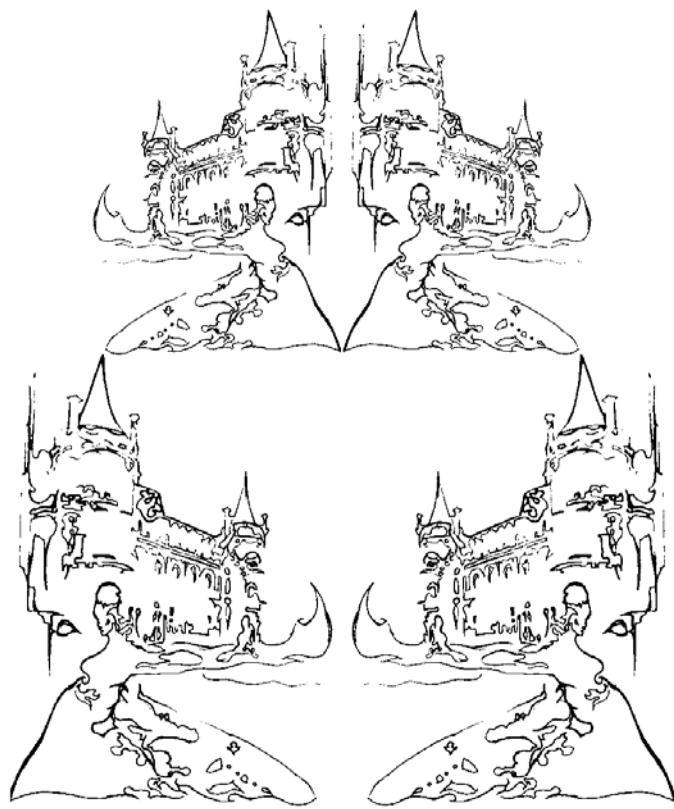

### Of what will you become?

What puzzle pieces will act as the bricks to the house of your individual universe? Who will you choose to invite to enjoy the shared joys of past memories hanging on the wall like paintings living and breathing inside of you? Upon what foundation will you create an arsenal of ideas and dreams? Over and inside how many oceans, mountains, planets, galaxies, and universes will you span your wings? To what degree will you project your castle, your ubiquitous jig saw puzzle? Controlling yourself is hard enough, is it not? What justified measure could be made to control others? How could any idea be called great if the idea is forced upon with an assortment of pressure? If the idea is good enough, wouldn't it rather be accepted by the means of being self-evident? Thoughts upon thoughts have been offered in appreciation to the gods by the likes of many, but since traces of experience exist in every single corner, how, what, where, when, and why will the truth lie?

Let me be honest, I am a liar. An anomaly this is, the truth and the lie. The beginning will begin today as it will begin tomorrow. The end will end today as it will end tomorrow. Eternal is the concept of awareness for if any moment you are not aware you will no longer know of such a thing therefore dismissing your being from all things known and unknown while canceling consciousness out into nothingness. The nothingness will take you away into a void where you would be prepared to become another miracle because by the law of miracles, ends start new beginnings.

Delving deeper into a grand castle holding all of our individual castles would lead to a vast array of spiritual architecture. The universe of the unknown is a grand house with a countless number of side by side residencies. Being able to reside in any of the other conscious castles would depend on the direct relationship of intermingling frequencies. When viewing our individual castle of thoughts, take a meditative approach with an atoning breath and transform all thoughts into a castle of clarity, clear of clouded judgment. This place harboring our soul can be created anew by the manifestations we choose to include. We can refill our well with new equal understandings, but first we must empty the well of any stagnant tainted confusion. How pure this place is of our eternal conscious residence is completely forged by our own personal undoing.

This is the art of destroying the conditioned self and the merging of the lower self and the higher self. Rebuilding this structure of a balanced self is alluring to some as it is very unappealing to others, but the act of acquiring a more integral self becomes, like all things, easier with practice. Sustaining the adaptation process of change is easier if one allows themselves to observe from a fair non-biased perception, disregarding all prior thought processes and patterns which might prove to be detrimental. This adaptation process can also be visualized as the mass fusion between mutual energies of ones and zeros. However expansive this field can be spanned will go to show the range of the individual's projection of the *oneiszero* field. The *oneiszero* field is all which can be included.

### Reset back to zero

In this meta-mysterium, beyond the dreams of kings and queens, you are the key to any door. Every second, every moment, every word, and every thought reflects the unfolding of your self with an immeasurable number of doors waiting in front and behind you. Every single word can be a new door with hidden layers of meaning. Every single page can be a new door for you to open, close, examine, analyze, ponder, and ignore, if you choose to do so. Every single book is a new door for you to learn what you allow yourself to. Every single day is a new door to be inquisitive and animated. Being able to access the awareness of these infinite doors in the broadest type of perspective is the quest of the ancient future. Some doors will remain locked until you realize how to breathe through into them. The more difficult the challenge, the more secure the door will be. Opening a closed door is easier if you are open to the possibility that there is a key. Once answered, once you realize what the key is, the door will open and close at will.

If imagination is real and possibility has no boundaries outside of being real, then something like going faster than the speed of light is merely something not yet commonly achieved, but you can imagine what would happen if you could do so. Portals of many kinds could be made to undo time. Consider what we do not understand as the true extent of time. If one could go faster than light, time would no longer exist as you would essentially become part of the Infinite, the ageless and timeless. Therefore you could time travel before your birth and after your death as well as before the hypothetical big bang and after the presumed big crunch. The entire illusion of reality and the entire labyrinth of riddles would cease to be.

Remember the moments which have not yet come to pass and help them become alive again. If time does not exist, then looking for the fundamental building blocks of creation will ultimately just lead to more and more constructs of question and answer. This infinite place is a much bigger system of anomalies with parallel dimensions, so keep the motions simple. When we run around in circles according to the laws that govern us, we will keep recycling the same encumbering cycles. If we do not abide by the authority of time's keep, we will become the arms of the clock to point our arms where we choose. We will become the eternal 13<sup>th</sup> hour in the middle of the clock, forever thinking always eternally now, while swimming vividly in past imagination and future memories. Creating lucid dreams by manifesting reality will become the new sense as well as an entire new structure of the space-time continuum.

To the reader, to the curious and patient decipherer of imagination, everything observed and unobserved, real and not real, perfect and flawed, and all in the in between is a choice to be part of. Closing the doors of the un-relative might have its benefits because it is warm and comfortable inside a safe place, but every so often take a look out the window, see more than the four seasons that pass and become what you will. The conquest of the irrational is not an easy task to inherit, but it is, at least, worth taking a look at.

### *The Shifter*

*Founded upon an accidental coincidence, the surging lines have no laws, free to shape shift upon the request of the eye. The morphing abilities of a phoenix dragon and an angelic demon are quite unknown and the full aspect of what can truly be manifested has yet to be seen.*

### **open\_close**

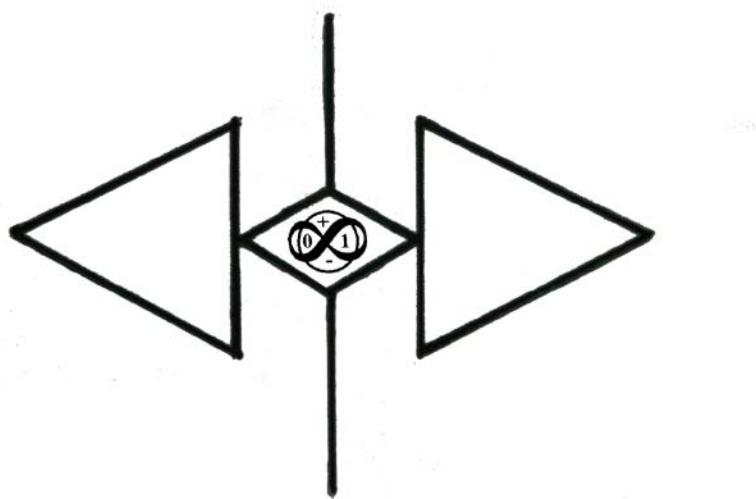

Cease your state of mind...

Control the temptation of the impious fruit around  
If you choose to walk towards the enjoyable wrong  
When the aroma lures you like a subliminal song  
Conjure up the visions of its imprinted footsteps  
The dreams which lay embedded with the dead

The desire for pleasure propels in space and time  
A temporary form of joy is what we seek to find  
As the addiction continues in a circle and a line  
The binary operating system keeps going awry

Walk backward and welcome the unknown  
Know how happiness can exist in any form  
Open the door going straight into the core

Remember who you were  
Remember the future

### The theory of $1 = 0$

Within the endless realm of this simple and complex formula is a truth to combine all truths. With an open mind, an open heart, and an ever growing awareness, one will be able to fully feel what is truly real. With this kind of unrestricted ideation, the preparation for the balance of all things, including any type of harmonious chaos, is more attainable.

The apparent paradox, however, begins in defining the indefinable. Crystallizing this theory into form is an endless task. No matter how many different ways to define or prove it, the result will always be the same. The troublesome definition of infinity comes to mind and scratching the surface to eternity remains a chaotic uncertainty.

In practical terms, this is an attempt to make sense out of nonsense, this is the logical reasoning of the illogical and unreasonable, this is the destruction of the boundary separating the impossible and the real, this is the unification of us and them, this is a universal axiom, this is the creation of new energy despite the universal law prohibiting it. If you understand how I am another aspect of you and how you are another aspect of me and how we are all unified in some way or another, then this will not be difficult to understand. If you are unable to accept the equivalence of relations in most and all things, you will not understand this at all.

A one (1) is any variable

An equal sign (=) is the relation

A zero (0) is any variable

Anything is anything

Let us first admit this formula as wrong. This is the obvious, a one is a one and a zero is a zero. They do not equal each other, they are two different things. In certain context, however, this formula is correct and can be visualized as so in just about every single aspect of life. Select answers for select questions may not be stated in this work, but the puzzle pieces which are laid out here attempt to adequately convey the exceptions which all things can relate to. The simple format of this formula creates an arena for vagueness, but in this space is where it can relate to anything.

Being able to accept the contrast of how we are both right and wrong in every single opinion will allow our comprehension to grow without the resistance generated from defensive pride. When we dismiss what we do not understand as wrong without thinking it through to the opposite side, we stop our mind from functioning wholly. If we believe we are always right and everyone else is always wrong, we will separate ourselves compartmentally. Our mind will ultimately become one-sided and any other side we may not be aware of will not function at all. Remember that a non-functioning mind is clinically dead.

How dead we allow ourselves to be rests upon each one of our own shoulders. Being awake from the slumber of ignorance is a gift we can only grant ourselves.

## Initializing the sequence

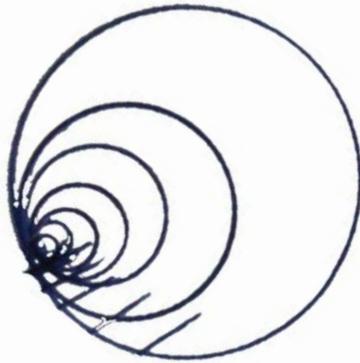

*Oneiszero* is constructed to be the invisible bridge linking any opposing sides together.

The entire scope of *oneiszero* is unlimited and can leave a countless number of impressions upon whoever interprets it. This principle is the same as the yin and the yang, although this is definitely not a new concept, *oneiszero* does help to reiterate the definition to new depths, especially to any who might not be aware of the concepts involved with Oneness. It does not intend to dictate what is true from what is false. It only intends to be a template for possibility. The entirety of this formula will not be fully explained, but rather expressed in a way so it will form a life of its own.

There are simple ways to prove the idea of this formula. A single object, in this case a coin like the pictures above, can be viewed in at least two perspectives. Looking at the coin sideways will give you the impression of a line or a tally. Looking at the coin straight on will give you the impression of a circle. Furthermore the coin is both a one (tally) and a zero (circle) depending on how you decide to look at it. This can relate to both everything and nothing along with any expressions in between.

Another example is how two people can endlessly argue over the color of the sun. One person may say the sun is orange and the other may say the sun is blue. Inside the spectrum of white light consists both of the colors, orange and blue, so both would be correct in their observations given that is the case. Technicalities would go to show how they might be both incorrect as well since color can be detected in a multitude of manners. Even though most people would contend how the sun is indeed orange, the sun may actually appear blue to a color blind person or even after a few minutes of staring at the sun too long. The point remains of how it is not a matter of who is right over who is wrong, but rather what is correct about what is being observed. The same goes for when the left hand is the right hand in the mirror and when up is down when you are upside down.

So how does this method of thought pertain to the meaning of life? Well happiness is the ideal answer, but this one word answer is missing an important element. In order to know what happiness is one must know what sadness is. How could anyone answer the question with both answers without contradicting the mean? Compromising the opposites as one answer furthers the case. The word observing, it seems is a more suitable answer although not a complete one. Along with the aspect of observing involves the attributes of happiness and sadness. So this brings up the other question. What is the meaning of death? Depending on what you think, observation would lead on to a new adventure. Non-observation would cancel the question out since awareness would not exist.

### **The language you eat and breathe is the language you think**

The meaning behind a symbol, a number, or a letter takes on more significance when supplemented with conjoined symbols, numbers, and letters of the same relative material. The letters become a word, the words become a sentence, the sentences become a paragraph, the paragraphs become a page, the pages become a chapter, the chapters become a book, the books become a category, the categories become a library, the libraries become an arena of knowledge, and the arenas of knowledge start to begin to portray the unpredictable number of possibilities of what is included.

In any law or theory, it is based on the definitions of the words that make it. Language can limit our thought patterns to the rules set by the definitions with barely any room for exceptions. By our definition of one and zero, they do not equal each other, they cannot. It is against the regulations of sense, reason, and logic. Since language is perceived by the individual by their own idiomatic style, alterations of the definitions will always occur. Language can be interpreted in completely opposing meanings between two parties. If one were to denote past the idiolects of an individual and took into full account the exceptions which altered absolute meaning, a more precise definition could then be made available for any expression.

In the heart of communication lies the truth of our meanings and intentions. The rules of language can limit the definitions of words to which that have already been accepted and understood. This of course grants misinterpretation for every spoken and written verse. In order to relate to the unnamed and unknown things, one must extend the definition in all the words one knows just to be able to grasp the initial possibilities of what lies beyond the restrictions of language. Unknown things do not have names or definitions. Any attempt to express any of the unknown things presents a problematic dilemma in our communication.

With new words being added and old words being altered, who could rule the decision of what a single word truly means, especially when it is just a collection of symbols together or sound vibrations in the air. Curse words and certain kinds of blasphemous prose will offend various forms of sensitive structures, but the marks of symbols and the sound vibrations should be noted originally as neutral. The intentions behind the vibrations of symbols and sound project the true meaning. Singled out words and phrases have been reserved to be prime examples for what is maintained by the traditional perceptions which keep them caged as so. The broadest scale of knowledgeable awareness would avoid the practice of being one-sided and to live in absolutes because of the span of the narrow perspectives.

Being aware of the broader contrast of any single word indicates a plausible measurement of how open minded the interpreter is. Whether the list of equalizing opposites on the next page is understood as true or false will be based on the definitions attached to the words. The equality in these equations is both true and false on different levels, depending on what angle you want to look at the words. Each single word has ambiguous qualities if you consider the complete scale of how they can be transmitted. If you take into account how anything is not only possible, but real, then life's game can completely change. This will lead to letting go of absolutes and stereotypes to further understand the exceptions for anything, thus liberating us from the dualistic separated mind and into a non-dualistic unified mind. Some of these formulas may be completely wrong in certain points of view, but the point made here is to display the possibility of the basics.

The application of using different word configurations should not be limited to just opposites being equal. Any two objects, whether they are animate or inanimate, can be viewed as equal to each other. Although absurd as it is to think how a grain of sand is equal to a conscious being, or how a piece of dirt is equal to a shining gem, it is also quite sensible. The exceptions are there if you decide to look for them and if you choose to agree with the equilibrium. If one can understand how size, shape, color, location, and time are simply illusions dividing the whole, then one will be more balanced minded altogether.

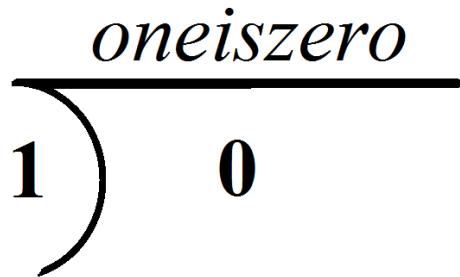

## Language flipping

one = zero  
 reality = imagination  
 beginning = end  
 creation = destruction  
 matter = antimatter  
 positive = negative  
 everything = nothing  
 cosmic = quantum  
 first = last  
 future = past  
 forever = never  
 infinite = finite  
 above = below  
 up = down  
 in = out  
 right = left  
 order = chaos  
 simple = complex  
 light = dark  
 hot = cold  
 white = black  
 yang = yin  
 man = woman  
 open = close

|                    |                          |
|--------------------|--------------------------|
| truth = lie        | inhale = exhale          |
| love = hate        | modern = ancient         |
| good = bad         | new = used               |
| joy = anger        | innocent = guilty        |
| unity = separation | young = old              |
| peace = war        | strong = weak            |
| you = i            | smart = dumb             |
| sense = nonsense   | beautiful = ugly         |
| correct = wrong    | rich = poor              |
| answer = question  | normal = crazy           |
| plus = minus       | found = lost             |
| fixed = broke      | active = passive         |
| tick = tock        | extrovert = introvert    |
| this = that        | awake = asleep           |
| yes = no           | life = death             |
| for = against      | hope = fear              |
| offense = defense  | perfect = flawed         |
| lead = follow      | holy = evil              |
| push = pull        | god = devil              |
| gain = loss        | angel = demon            |
| large = small      | hero = villain           |
| more = less        | peace keeper = terrorist |
| deep = shallow     | republican = democrat    |
| convex = concave   | fate = freewill          |

The common curse of words is how certain words associate other words as being on the same sides. Just because one word may be on one side doesn't mean there is any association with the rest of them. Words do not pick sides. We pick the sides for the words. For example, up does not always mean positive, strong does not constitute beautiful, small does not always portray weak, and the concept of nothing can actually be a very spectacular thing. Consequently one can find light in the darkness and one can also find darkness in the light, just like one can be found in the dark and one can be lost in the light. There are exceptions to any rule and in this case is the rule itself.

Abstract thoughts further create abstract writing. Words, when coupled in combination, create a frequency of meaning, a wavelength of intention, and a tone of purpose from which they originate. If you were to respond to any form of expression, would the reaction be based from the meaning, intention, and purpose of the originator or from the inner ward conclusions of the reader? Linking these two different frequencies together, that of the author and that of the reader, and setting them in parallel with each other will show the correlation of opinions. By-passing our opinions in conjunction with how words are understood will lead to developing a more forgiving atmosphere in an imagined dialogue in order to determine how close we are to being on the same page.

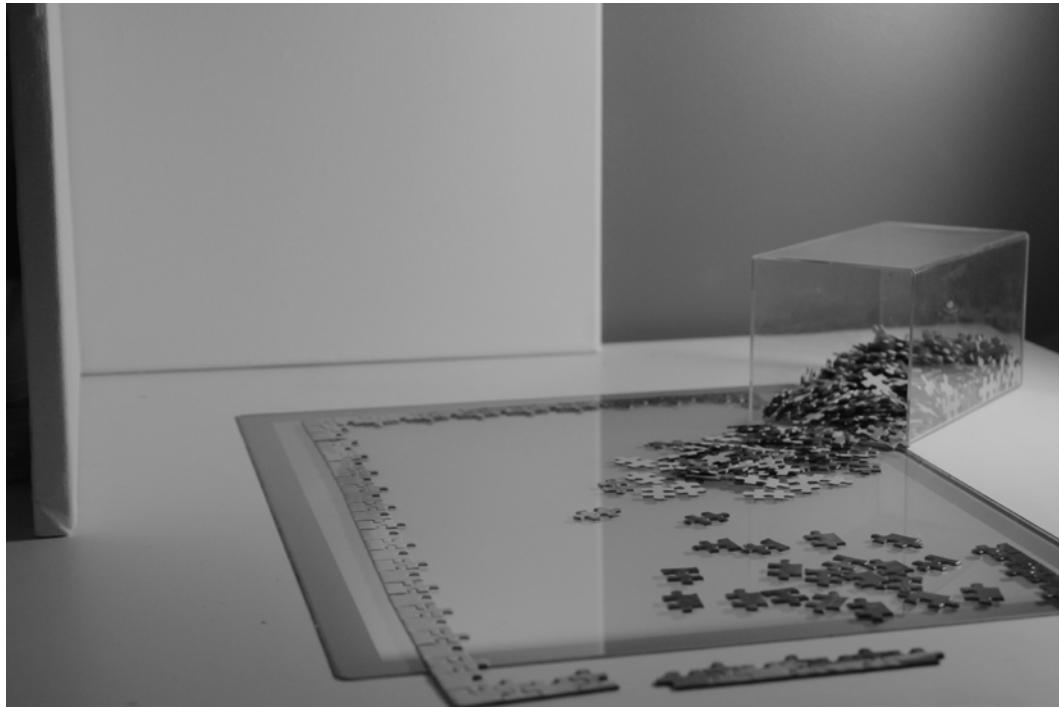

### **Uniting the division of zero**

This suggested fundamental theory to implicate and explicate all things is outlined by the two most eminent numbers in our known history. What better way to represent the theory of everything and nothing then through the numbers and symbols which will undoubtedly be in every culture, both domestic and alien. This formula is the best prime example of something hidden in plain sight. Under and over standing the full extent of *oneiszero* will be for the curious analytical who like to figure things out. This theory is background independent and also predicates the differential element of universality in which all consciousness and things are included.

Those who can understand simple truces can understand the concept of mutual respect in the freedom of thought. This is an example of recording the freedom of an elaborate thought. One could contend how dividing by zero results in two direct answers. It can be chosen to think this way as opposed to thinking you cannot divide a one by zero at all. Zero can fit into a one an infinite number of times therefore making infinity one correct answer, however, the zero could also mean that it is not anything, it is simply nothing, therefore making the answer no amount of times which would conclude that a zero does not fit into a single one, one time, thus making the answer zero. Infinite and zero are two possible answers to this seemingly impossible question, but if one were to be compelled to think the zero was the infinite and vice versa, and that the one is equal to the zero in some shape, way, or form, the answer could then be officially defined to a new degree.

Mathematics is a universal language in which the symbols and numbers represent their conclusions with and without fallacy. The incorrectness of dividing by zero also reflects the correctness of the same. Some of the most pragmatic mistakes have paved the way for new courses of understanding, so this mistake is to be made on purpose. Albert Einstein spoke of mathematics being the conclusive expression of true variables which could not be altered by means of outside interference and perception. On paper, the expressions created and the indications manifested by mathematical values are absolute according to the rules in which they follow. The questions and answers will always be limited to the terminology of the symbols and numbers involved. Mathematics calculates what is correct against what is incorrect with absolutes, but hidden variables will always remain an oddity in every real life problem.

### Eternal jig saw puzzles

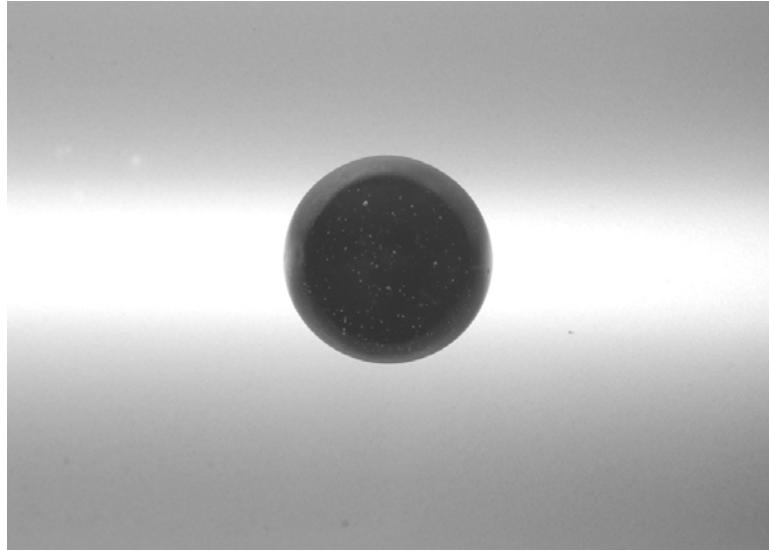

The overall use of gathering together the puzzle pieces of the old and the new instead of them being continually lost and separated apart remains empirical especially in this era of time. There are many mathematical worlds which may agree or oppose this notion, but the proofs are there if you decide to look for them. The proof is not my own therefore the answer below is incomplete.

Given that  $e$  (everything) and  $n$  (nothing) are integers such that  $e = n + 1$ .

Prove  $e = n$

- |                |          |
|----------------|----------|
| 1. $e = n + 1$ | 1. Given |
| 2. _____       | 2. _____ |
| 3. _____       | 3. _____ |
| 4. _____       | 4. _____ |
| 5. _____       | 5. _____ |
| 6. _____       | 6. _____ |
| 7. _____       | 7. _____ |
| 8. _____       | 8. _____ |

In order to prove this formula correct, there would need to be a mathematical exception to prove the rule. The mathematical exception to this proof is the division by zero error.

$$\infty = \infty^\infty$$

### Oneness

**Infinity equals Infinity to the Infinite power**

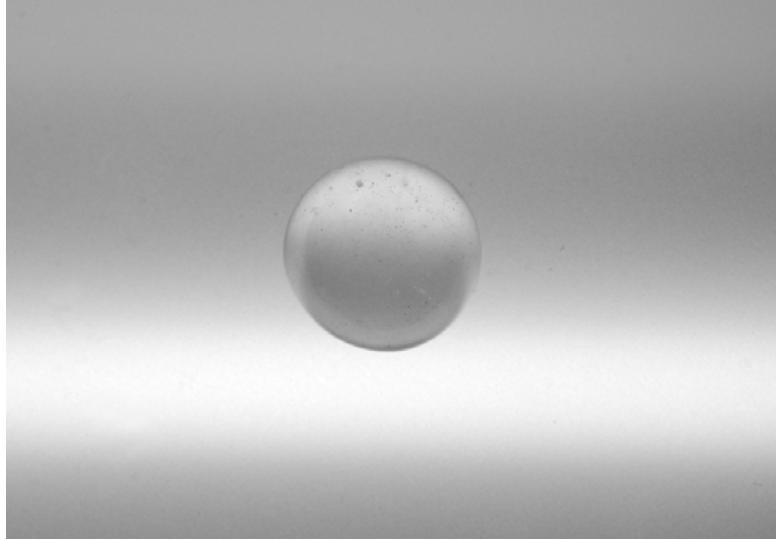

$$\begin{aligned} Aa=Bb=Cc=Dd=Ee=Ff=Gg=Hh=Ii=Jj=Kk=Ll=Mm=Nn=Oo=Pp=Qq=Rr=Ss=Tt=Uu=Vv=Ww=Xx=Yy=Zz \\ 0=1=2=3=4=5=6=7=8=9 \end{aligned}$$

The infinity formula above mimics the limitless field of the *oneiszero* scope. This formula states any single one thing, while comprised of an assortment of ones and zeros, is wholly together an eternal one and zero. Depending on the unique identity of the one thing, various fluctuations of creation are demonstrated. An embodied single one thing is equal to all other things involved. The other things involved are each a single part, also a fused together embodiment of an assortment of ones and zeros, and the number of other things are unlimited. The complete whole is the sum of the entirety of all things. Anything being anything is the true map and blueprint of the manifested All before sectors are divided into compartmentalized space, time, and consciousness.

The essential everything...

The picture above represents all that would be included into a freeze frame of an expanding single universe. This picture does not show any other universes, besides for a single one, but beyond the clear space there could be a hypothetical number more on a much larger scale. The amount of variations which could be spawned is indescribable. To reference all on a single page would leave layers and layers of ink gathering on top of each other, leaving a single page blacked out from being a blank page prior. The layers of ink would soon clump on top of each other in thicker layers to try to convey all the pneumatic descriptions of universal properties. The All and the everything will still exist in an environment outside of that page and no matter how tall the ink could ever stack, the page could not ever fully explain the expanding change concurrently going on. The amount of information one single sequence takes for a single atom inside any of the ink's molecules would be a task in itself let alone the numbers or letters to represent the factions of larger scale functions. Eventually the ink would form into a growing droplet to describe what is surrounding the page and would look much like a growing space bubble with an environment still outside of it. With the inclusion of consciousness, there are few things not to say. Where would one begin to speak of all of the certain things and where would one begin to speak of all of the uncertain things?

The initial departure from the mind, saying goodbye to the clockwork of time  
 Hovering above everything left behind, liquid memories ciphering thru in rewind  
 Finding out the essence only abides within a mass illusion of the circles and lines  
 No more need to hide on any side and no more need for any kind of signs

$$0 = 0^0$$

### **Nothingness**

#### **Nothing equals zero to the ninfinite power**

Nothing is a part if not a hole of everything and everything is a part if not a hole of nothing.  
Nothing is apart if not a whole of everything and everything is apart if not a whole of nothing.

I believe in nothing like I believe in the nobody, I care for nothing as I care for the nobody, I appreciate nothing as I appreciate the nobody, and I love nothing as I love the nobody. These statements can be interpreted in a pessimistic style. These can also be meant in the most optimistic way possible. How you read anything reflects yourself. Nothing can make sense just like nonsense. Nothing is a rampant concept, meaning more than the dictionary leads to believe. Nothing is a word, therefore gives up all right to absolute meaning as well as every other single word in the dictionary. Each single word can mean anything on its own because all of them are notions of possibility. Extending the definition of any word is confusing and requires more thought, but it is necessary if you want to communicate for what others may mean. Although this is an abstract way to observe the world around us, it does have its purposes.

The essential nothing...

Could you imagine a trillion pellucid diamonds glaring off a blistering crystal ocean, without time, during both a frozen dawn and dusk on a cloudless sphere with an invisible core? Even through the interstellar medium to the horizon scale, space beyond the color of clear, in all its glory. Without any type of view, nothing resembles incomprehensive outlines of something transparent. This plane of translucent prisms all reflect clear rays without temperature from a placid star all while in peaceful silence without any type of vibration. Only the clearest of consciousness are able witness this place because they resonate absent echoes. For anyone to transmit an echo in this place would refract the manifested color and sound while disrupting the unequivocal balance. This void of purity is perfectly nothing with minuscule unknown exceptions. This place is of unending innocence, untainted and sinless. The pre-existence to any beginning is this place before our birth. This is a concept of knowing such a thing as nothing to be a sacred place of possible dreams. During these moments of clarity, of complete tranquility, thought is un-polarized, unbiased, and without judgment, directionless, but full of direction all at the same time... a time which would not exist. All of this is to update prior misunderstood phrases that are 'nothing' is perfect and 'nothing' lasts forever. Nothing is perfect and it does last forever.

Imagine on a plane, a voice and a void, insane and inside the sane  
Open the doors beyond reason and nothing will never feel the same  
The no thing knowing things, a concept of embracing frozen change

All a part of this game, where the none is at least part of the one

### Certain uncertain conclusions

**It is what it is not It is not what it is**

The dual nature of conscious thinking is acquired by being accustomed to separating the identity of polarities and by continual closed minded thinking.

The non-dual nature of conscious thinking is acquired by being accustomed to uniting the identity of polarities and by continual open minded thinking.

Claiming this to be the Universal Theory of Everything or the Grand Universal Theory would lead others to say it is not. Those who oppose have full right to do so. To say Grand, would imply lesser, and to say lesser would imply division. All formulas mimic the infinite so all formulas are the microcosm state of the macrocosm state, in some way, shape, and form. Figuring out the sequences of nature will always be of the utmost importance for human

development and finding harmonious patterns will always be a challenge for every horizon. Inventions are the creations of imagination and the process is just as important. In the end, however, all sequences and formulas can be broken down in simplest form to being one equals zero. The understanding of this formula relies on the definitions of the parts. This theory is made for like-minds, similar in respect of mutual logic and reason. By using true equality as the standard, the aim of compassionate progression between all forms of energy, including the known as well as the unknown, can be better identified. Whether accepted or not, this philosophy represents the true equality between all things and in the very least, *oneiszero* stands as an acting substitution for a theory of everything and nothing. Being background independent helps the reasoning since the proof for this notion is most evident alongside the substance of dreams. Any conflicts because of this notion are not endorsed, promoted, or intended. In any case, let the case be lost.

It does not matter whether *oneiszero* is right or wrong.

...A wave to point to or a point to wave at...

What answer can maintain to keep the definition of the infinite?

Apples to oranges along with the seeds of alien fruits,

What possibility will really hold the truth?

The realm of possibility doesn't even really exist,

Because possibility cannot be held within the realm of a single disc.

### Of line and color

'Tis the substance of legends, lest we remind you of the forgotten apple, harbored from the tree of unconditional love on the other side of a broken paradise. This fruit of transcendence is surrounded by abandoned creatures of sin, which have been enveloped into complete darkness. If an Eve was tempted by an apple of consequence, then why couldn't a guileful serpent too be tempted by an apple of pure light? Needful to say, original sin is original innocence depending on how you decide to look at it and if we were born as a perfect circle, we will surely die as a perfect circle. If ignorance is innocence, then curiosity is courage and labor is love. All of the in between will be exempt with exceptions.

Once upon a god,

The creation of polarity began contrasting the darkness from the light. The details of an elaborate story remain unspoken, as not yet directed by an ultimate source, the androgynous one and zero, the All who understands the separation of good and evil and the secrets to its own mystery. Any of these opposite words with opposing meaning, mean the same according to a first architect, an Omni-potent creator of what Is. Changing at will, with the ability to make anything real, the everything and the nothing, the orderly chaos, the free fate of eternity, all while recording the unseen dreams of lost history. Entrusting with us what we choose, knowing the mistakes we make will guide us to our own truth.

Once upon a devil,

The destruction of unification persists.

### *Infinite Regression*

*If thought is light and light is conscious, then become your own pulsating star. The holomorphic particles of a crystal being are as potent as any of the adjacent cosmic nebulas. Entice them to fuse with you to develop a higher self beyond any kind of prior wishes. Stretch way further than far out until the point where you become farther in. Think shallow, think deep, and think all the way through, but still tune your receptive energy to the universal frequencies and tap into the enigmatic parts of yourself. Whether or not you come into terms with your own ultra-conscious and unify the Metaverse together will be entirely based on your own ability to fuse things together. If you do, the phantasmagorical map of all things to come and pass will be clearly evident.*

## An Endless Hourglass

With the spin of the hilt, sand is falling quick, time drops as silt and builds  
The variables of life, those in which were misunderstood in the new past  
Have come around at last, pulsing arduously in an elated full circle  
I undergo how there is no longer a beginning or an end to a soul  
Too few coincidences for us to be anything less than a miracle  
Finally I know the complete realization of the one and zero  
To manifest happiness is no longer an impending wish  
This rara avis bliss constructs an ambiance of genius  
For I am an eternal thirteenth, a latent phoenix  
Confined not by any real matrix of artifice  
Even if I am wrong, I could still be right  
I am forever part of the day and night  
Energy breathes thru, over and again  
Everything in facets of imagination  
Existence calms as one unison  
Incite peaceful revolution  
Give away endless pride  
With love,  
We all will share  
One analogous hive-mind  
If astronomers had no more stars  
Realize what the Metaverse offers  
Explicit unparalleled gifts of laughter  
When there is abundance of absent blight  
Where sanctuary is both darkness and light  
Understand the paradise is what is made of it  
Even if it is in the infernal waters of the abyss  
Exist in quantum power, the atomic anti nucleus  
Then again, there are ample doctrines of the obvious  
Leading overpopulated houses of greed, envy, and lust  
The self-created hells, the self-conscious prison-like shells  
Bred by the far too common ignorant and arrogant lifestyles  
In an anomalous way, I treading against the automated instincts  
The kingdoms of nothing which has always been within my reach  
Oddly, in this unsure world, has abruptly sought out to have found me

I\_O

Evolve already sleeping genie  
and roam free

We are more than helpless grains of sand  
and just mere holograms

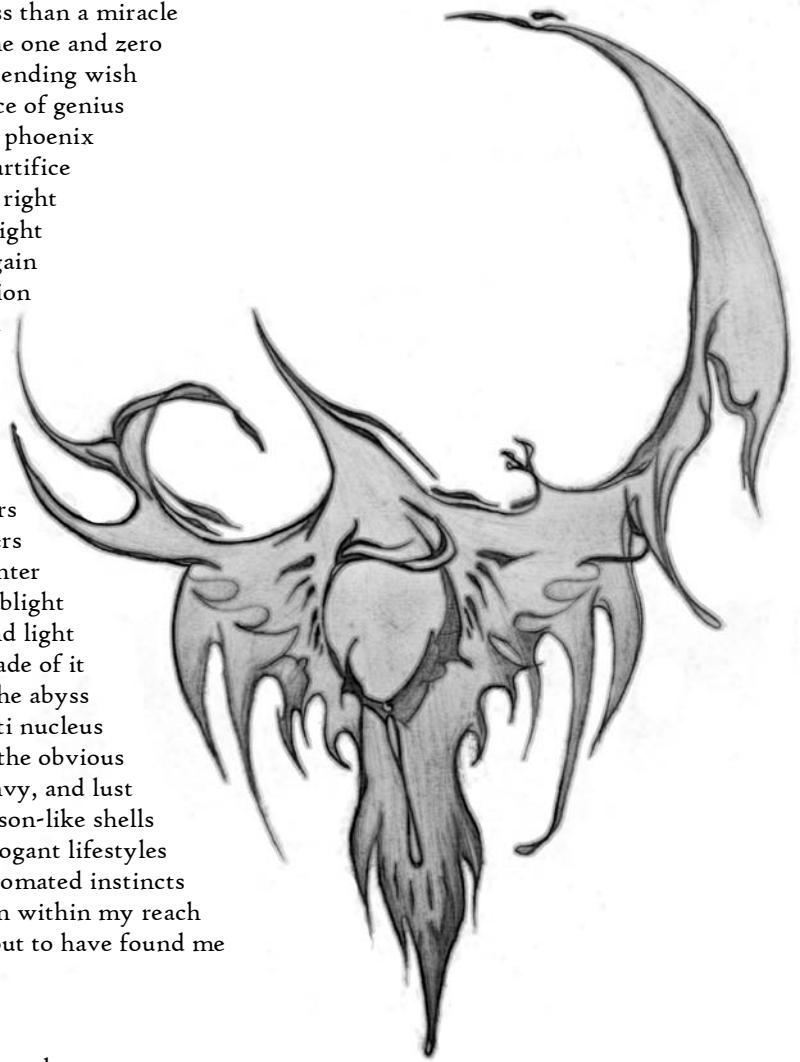

We are trapped by a lucid hallucination  
born from a jealous sun

We are restricted by a continual inversion  
of cyclical patterns

Break the mold of the system's hourglass  
by disobeying the syntax

Awaken from yourself  
and know you can never die

All of us own the keys  
to the side doors of time

What 'It' is, When 'It' is, Where 'It' is, Who 'It' is, Why 'It' is, and How 'It' is  
'It' simply 'Is' like Space to Time. They almost need each other.

## Wheels of eternity

...1=0 1=0 1=0 0=1 1=0 0=1 0=1 0=1...

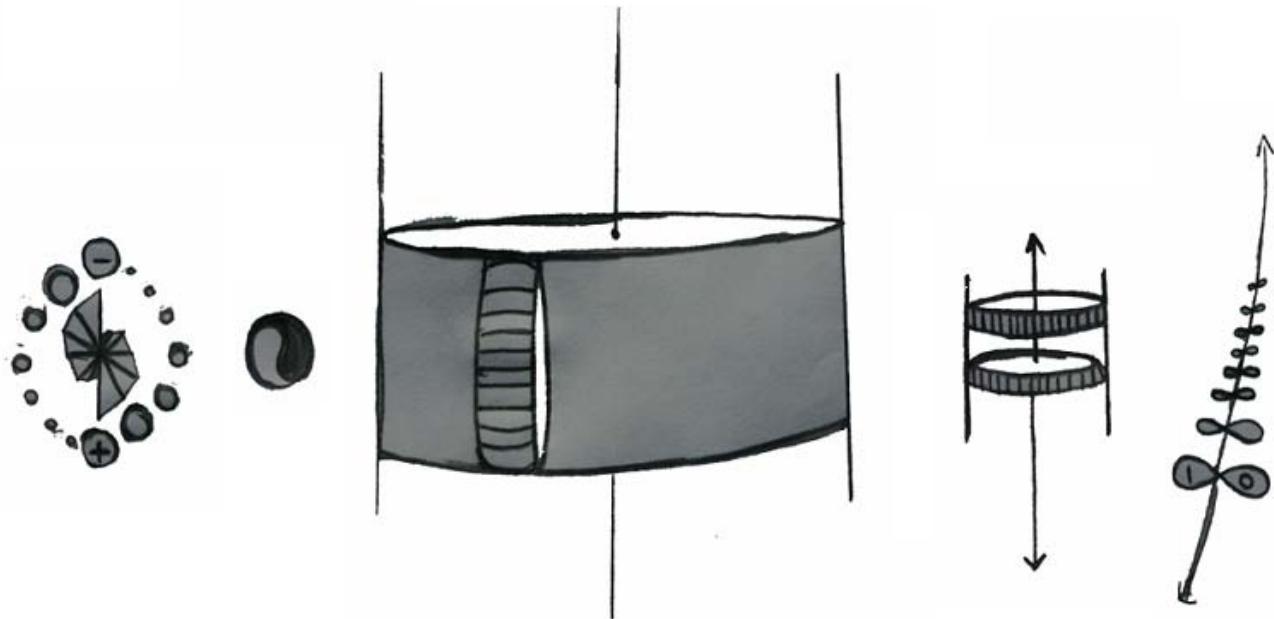

Will, I remember  
What this is all supposed to be about  
When the essence of life really mattered  
Where happiness is not just above the clouds  
Who resided in the memory of a god  
Why these tenets seem so odd  
How to laugh, live, and love  
Will, I remember

Wondering upon the nature of existence is a compelling game to play. Through many painstaking efforts, updated rough drafts are continually being built of what 'It' all 'Is'. With the accumulation of shared knowledge, many subjects and theories keep blessing all kinds of light on the mind wrenching questions of our origins and purpose. All that which is included can be propelled by the nature of possibility which would further lead to the realization of how little is actually known. The more suitable definition for reality is better left undefined instead of limiting the boundaries by the rules which engage in a solid this and a solid that.

The immense scale in which a universal continuum spans would be tremendously hard to explain in any format. Breaking down the size of these notions and placing them within a grid of wheels goes to show the placement of 'things' which can be related. The wheels of eternity are a combination of ideas in equilibrium conveyed through multiple illustrations which encompasses the aspects of space, time, and consciousness. These illustrations merge together to map out the pieces of a grand jig saw puzzle in an attempt to help accommodate the questionable nature of the unraveling unknown. The common symbols to include all things will of course be a circle and a line. A circle within a circle, a line within a line, a sphere within a sphere, a torus within a torus, and a wheel within a wheel are all common themes in regards to each other and each can stand to represent any single object or collection of objects.

As amateurish as this may be to over-simplify and under research these technical arenas, this is just a method to point out certain things. I encourage you to, in result of your own ambition, to research these subjects on your own authority to clarify any further on what is being said. This entire theory started from one single visual idea which then grew into relating to anything acknowledgeable. The original visual was seeing how the way light breaks on a horizon line. A single horizontal strand of light became thought of as the tally view to a ring of a soul. One soul became two souls, and two souls became many. The bands of light, each a ring, held together in a larger ring of light, was the initial basis of this theory. Proof and evidence became secondary to the feeling of harmonized intuition concerning this one particular theory of an infinite number of wheels of energy.

The pictures below can only start to illustrate this notion. From the left to the right: (1) Fluctuations between positive and negative energy are defined by the components. (2) The components of a single encapsulated identity create a type of yin-yang plate. (3) Each yin-yang plate is an intricate ring full of smaller rings within. (4) Each yin-yang plate is part of an energy field with other yin-yang plates in parallel according to the time and location. (5) Each yin-yang plate is an eternal loop of energy and there are a countless number of loops which are all coordinated into an even larger ring appearing to show a system of wheels within wheels within wheels.

## Energy theory

Everything is from a source. This source cannot be coined as a definition. This source conjoins all things together as a whole which is the elemental requirement for any pure god. Life as we know it is the collection of the circles which we can view and imagine. While the physical reality and the non-physical reality advocates have their highly feuded debates, let us move forward from argumentation and agree how these illustrated circles will be representations for the stated objects and forms.

Let us be reminded of a few key things:

Energy is mass  
Particles and waves are the same  
Electricity causes magnetism and vice versa  
Every particle has an unseen coexisting anti particle

Human sight is limited to a very small portion of the electromagnetic spectrum. Along with visible light on this scale are gamma rays, x-rays, infrared, microwaves, and radio waves. The observations humans can measure tally up the percentages for the universe as so: about 0.5% is said to be ordinary luminous matter, about 4.5% is said to be ordinary non-luminous matter, about 23% is said to be of dark matter, and about 72% is said to be of dark energy. Dark matter is said to be the missing gravity element holding the structural integrity of the cosmos. It is said to make up for the lack of mass in the overall scheme of the motions of galaxies and the like. Dark energy is said to permeate all of space and propel the expansion of space in an ever accelerating rate. Sound is also limited to a certain observational range as well as smell, taste, and touch.

There is said to be four forces working together to maintain the balance and equilibrium of all there is. These four forces are Gravity, Electromagnetism, the Strong Force, and the Weak Force. The anti-counterparts are, for the most part, untested and are still largely a mystery.

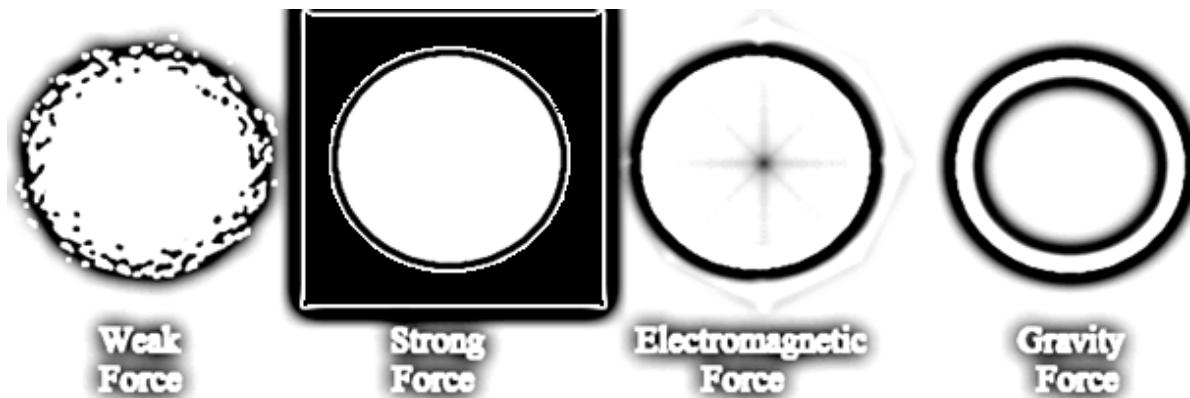

Gravity regulates the position of matter

Electromagnetism holds matter together

Strong force creates a force field of quarks to become protons and neutrons (stable structures)

Weak force gives the transforming ability to convert protons and neutrons (nuclear structures)

The weak force changes particles on a nuclear field, the strong force holds sub atomic particles together in a kind of glue type of force field, electromagnetism holds particles together in a kind of static force field, and gravity holds the culminations of bulk matter in a kind of a fixated force field. The complete integration of these forces has not yet been achieved with compatible values.

## Abstraction of circles

This is a development of a construct to hold all constructs based on circles within circles. This construct can be related to any number of things as will be shown. The entirety of the proportions of this construct is too immense to be able to easily draw it and explain it on one page. Due to the limited space on paper, the reader will have to visualize the things they want to. Drawing trillions of circles could be a bit tedious, so feel free to fill in the blanks as you see fit. These diagrams are incomplete because of unknown factors and variables, but these diagrams have more than enough room to compensate for any 'thing' to be included.

Starting from the top left corner on the adjacent page, a quick way to look and understand these circles is as follows:  
A collection of strings make a quantum particle, a collection of quantum particles make a sub atomic particle, a collection of sub atomic particles make an atom, a collection of atoms make a chemical compound, a collection of chemical compounds make an environment, a collection of environments make a planet, a collection of planets make a solar system, a collection of solar systems make a galaxy, a collection of galaxies make a local group, a collection of local groups make a super cluster, a collection of super clusters make a hyper cluster (hypothetical), and a collection of hyper clusters make the known universe (hypothetical).

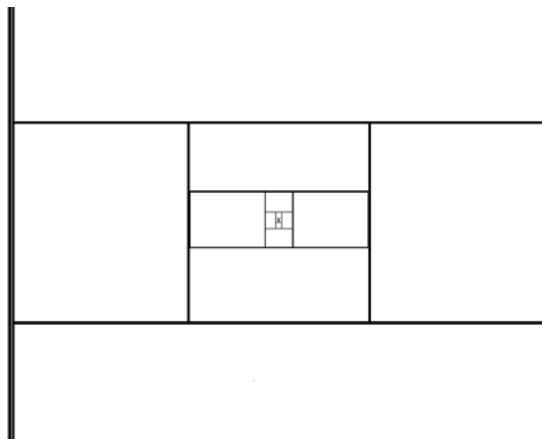

More specifically, we will start depicting these building blocks (represented in circles) with a single infinitesimal starting point to identify how these wheels break down to 'it'. The illustration on the adjacent page will be based on one of the strings, inside one of the quarks, inside one of the protons, inside one of the atoms of oxygen you will inhale next. Followed next by where you are sitting, presumably on Earth, rotating in our solar system, somewhere in our Milky Way Galaxy, still spinning in our Local Group, floating along in our Virgo Super cluster which is in our unnamed hyper cluster, all moving accordingly within the observational universe. The expanding of space could be viewed as a ring itself, circling from birth to death. Each one of these aged circles could be represented by being a ring as well, circling from birth to death.

The particle and wavelength duality makes it seemingly impossible to scale the size of a sub atomic particle as they are more affiliated with their energy mass. The suggested sizes are general estimations for reference only. The suggested proportions of these circles are meant to be a substitution for the composure and placement of a single object. In level 3, it appears in the picture that the proton is orbiting the nucleus. The circle of level 3 is only a representation of how a proton is one of the sub atomic particles which helps to create an atom. Also, the shape of any of these objects is not limited to being circular, only referenced as such to identify them.

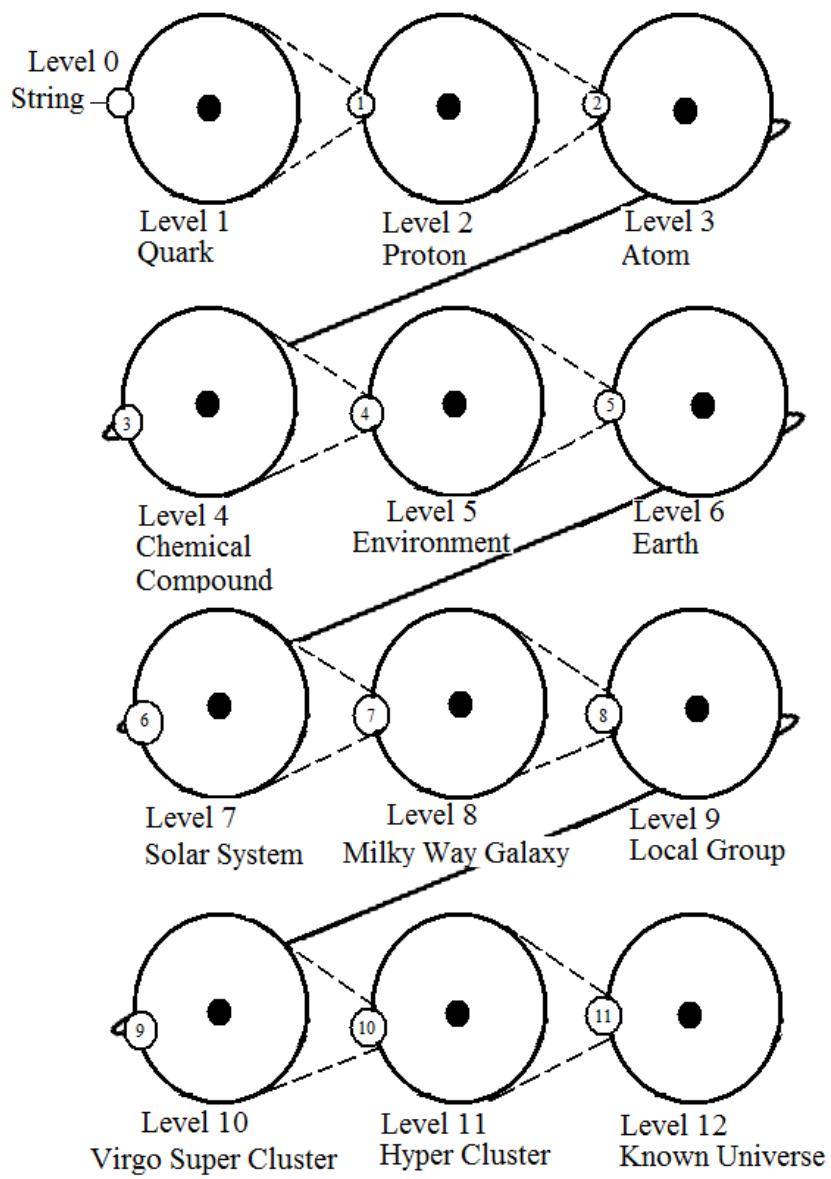

The picture below is a visualization of a fractal and is also the pattern of what is explained above and shown on the next page.

*Note: Anti-Theory*

Every level has an unseen anti version. These anti circles could be noted as negative levels in correlation with their specific number. For example, Level -1 is the circle containing the anti-quark, Level -2 is the circle containing the anti-proton, and Level -3 is the circle containing the anti-atom. Anti-environments and anti-galaxies are just the next logical steps of possibility. The movement of anti-energy is unknown along with what the nature of anti-nature might be. To clarify, if it should arise later, there would be a positive zero and negative zero (+0 and -0) in respect to their string counterparts in relation to a neutral zero point.

## Within within

The next level of a circle will be comprised of the parts in the ring before it. As the collection of circles continue to multiply and get bigger on higher levels, zooming out is essential to understand the location in relation to other 'things'. Zooming in is just as necessary when wanting to define a single 'thing'.

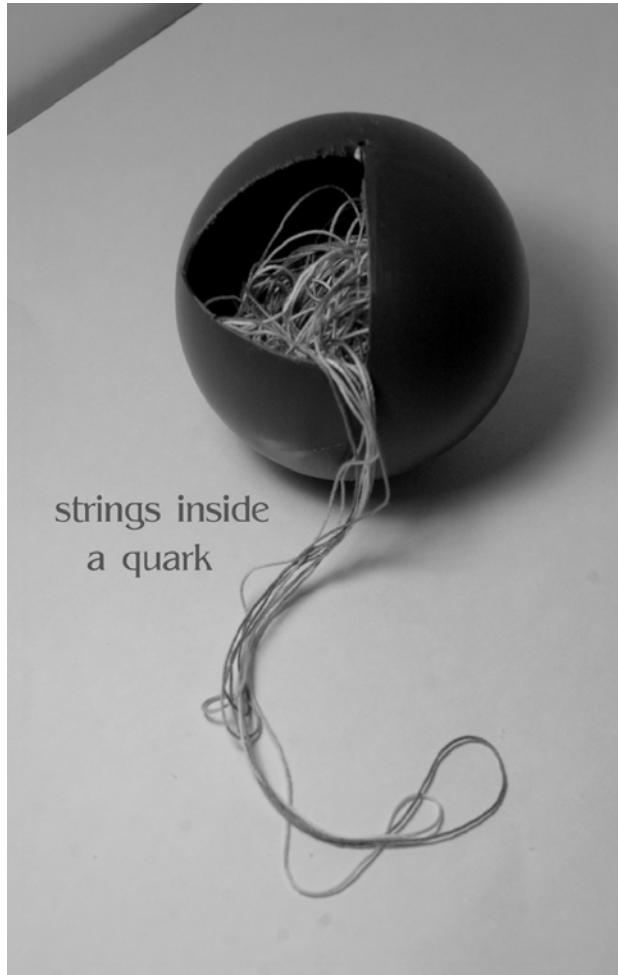

## (Level 0) String

*Unknown size*

String theory can basically be described as the resonances of vibrations inside of the tiniest of particles. Like the musical vibration of a chord, it creates a frequency to manifest a particle / wave. String theory is said to be the fabric of the blanket of reality. Not point particles, but instead intricately woven threads of an innumerable amount of vibrating strings harmoniously working together in a master symphony called existence.

M – Theory is said to unify the five string theories of Type I, Type IIB, Type IIA, Heterotic E, and Heterotic O alongside with 11-D Super gravity. The theories are rich with diversity and the mathematical situations are highly complex, although not much can be said here due to lack of knowledge. The limited number of dimensions for individual constructs would contrast with a field of infinite possibility. If every possible instance is created in an alternate parallel dimension and the highest possible number of things and all other things were combined, then an ever expanding range would continually grow into more than what can be generally comprehended. Thinking of every possible instance simultaneously happening on a grid of parallel realities is incredibly difficult, but from the quantum strings to the cosmic strings, one really long tangled thing could be what is in and out of the center.

M – Theory can stand for multiple and many theories. Multiple leads to infinity and infinity is undefined. Meta-theory involves these infinite notions of possibility which conjoins both, the applied theories of physics and the unapplied theories of the unclassified.

## (Level 1) Quantum particle

0.0000000000000001 of a meter (14 zeros)

Quantum mechanics are a developed set of recorded principals which attempt to define the behavior of mass and energy on the tiniest scale. The Standard Model of the quantum field theory attempts to explain the interactions between the four forces on a sub atomic level. This theory is given credence by the experimented results of what has been documented.

These elementary particles, classified by their spin, have been detected to form the Standard Model.

Fermion particles – building blocks for matter (only one particle can occupy the same quantum space)  
Boson particles – interacting gears of the forces (multiple particles can occupy the same quantum space)

12 Fermion particles (quarks and leptons) with their 12 mirrored anti-particles (anti-quarks and anti-leptons)

| <u>Quarks</u> | <u>Anti quarks</u> | <u>and</u> | <u>Leptons</u>    | <u>Anti-leptons</u> |
|---------------|--------------------|------------|-------------------|---------------------|
| Up quark      | anti-up            |            | Electron          | positron            |
| Down quark    | anti-down          |            | Electron neutrino | w/ anti neutrino    |
| Bottom quark  | anti-bottom        |            | Muon              | anti-muon           |
| Top quark     | anti-top           |            | Muon neutrino     | w/ anti neutrino    |
| Strange quark | anti-strange       |            | Tau               | anti-tau            |
| Charm quark   | anti-charm         |            | Tau neutrino      | w/ anti neutrino    |

A proton is built of two (2) up quarks and one (1) down quark

A neutron is built of two (2) down quarks and one (1) up quark

An electron is a fundamental particle

4 Boson particles, the force carriers

Photon – basic unit of light, long range interaction (zero mass) in electromagnetic force

Gluon – Holds quarks together to create protons and neutrons in strong force (atomic structure)

(2) W Boson and Z Boson – short range interaction (heavy mass) in the weak force (nuclear decay)

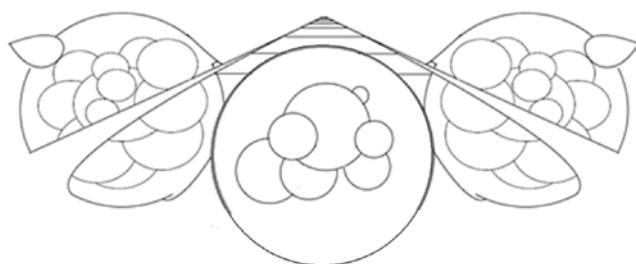

There are many hypothetical particles which have not been discovered, but only exist in theory such as:

Graviton – Hypothetical particle which mediates gravitational interaction

Tachyon – Hypothetical particle traveling faster than the speed of light

A hadron is a composite particle of quarks being held together by the Strong force. There are two types. One is called a baryon and the other is called a meson. Baryons (composite fermions) are created with three quarks. Mesons (composite bosons) are created by one quark and one anti-quark. Baryons and mesons also have anti-baryon and anti-meson counterparts. A proton is the only stable hadron (baryon). All other composites decay at different rates, besides for any dormant neutrons inside of a nucleus.

The Large Hadron Collider at CERN, near Geneva in between Switzerland and France, is the largest particle accelerator in the world. These kind of gigantic scientific instruments have been able to prove the existence of particles and continue to lead the way for discovering the smallest units of energy. The Higgs Boson has recently been claimed so further study will be needed to define what exactly was found. The point of this brief description is to simply state the approximate placement of these particles. There are many other particles which are not listed here and a tremendous amount of information not included. A mention to be given is how Murray Gell-Mann named the quark as so when he decided on the spelling of the word after reading the phrase "Three quarks for Muster Mark!" from the book 'Finnegans Wake' by James Joyce.

## (Level 2) Sub atomic particle

Nucleus – 0 .00000000000001 of a meter (13 zeros)

Within the electron, proton and neutron, you will find the already mentioned. The individual atom depends on the constituents of the parts. All the little strings, within the tiny gears of electric charge and lack of electric charge, have a different effect on the scale of how stable to unstable 'it' is.

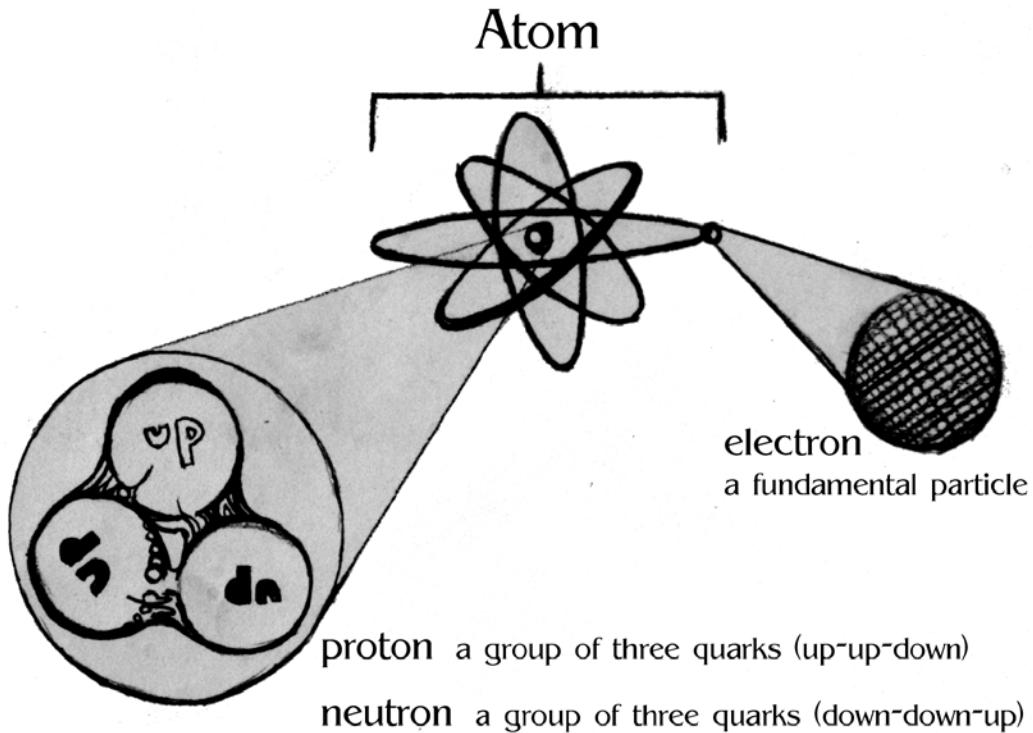

Proton – sub atomic particle with a positive charge

Neutron – sub atomic particle with no net electric charge, mass slightly larger than proton

Electron – sub atomic particle carrying a negative charge, 1/1836 the mass of a proton

A diverse number of protons, neutrons, electrons will combine to make different elements. If you add too many protons, you will overload the nucleus and get a radioactive element. Neutrons add stability to the nucleus by adding mass. Neutrons can remain dormant inside of the nucleus or shape shift into a proton and even back into a neutron. When the atom changes into another element you will have nuclear power. The nucleus is said to contain more than 99.9 percent of the mass of an atom, but is only 1/100,000 the diameter of the atom.

An electron is a base component of energy, meaning you cannot break it down into divisions of any kind. A few more things about the electron is how the shape of an electron is unknown due to its particle / wave duality, the electron is the only stable lepton, the position of an electron cannot be pin pointed, electrons can be shared to bind atoms together to create chemical compounds, electrons play a key role in electromagnetism, an electron in motion creates an electric field, and electrons can be destroyed with positrons (anti – electrons). The effect of conscious observation upon the particle / wavelength gives plenty of room for further discussion. The electron is mysterious and illusive and there are many mysteries still uncovered about this not so basic particle.

## (Level 3) Atom

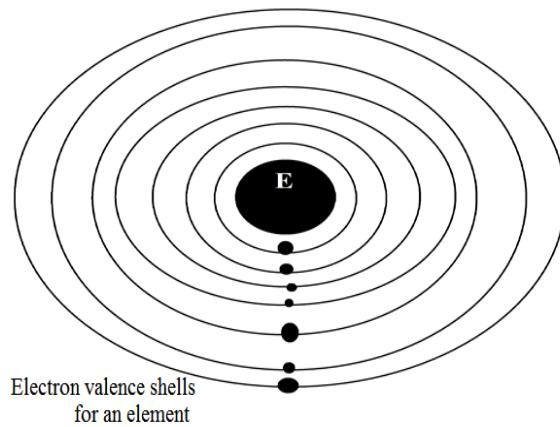

.00000000001 of a meter (ten zeros)

The crystal-like structure of an atom starts by being a nucleus surrounded by a static field of electrons in a force field held structurally together within a mainframe of the four forces of gravity, electromagnetism, and the strong and weak forces. These moving objects of vibration, with their electric pulses and spins, combine to build a number of things. Depending on how many protons the atom consists of will determine what the different chemical element it is.

The Periodic Table of Elements is the chart to describe each of these individual elements. Each one of these elements has their own proton, neutron, and electron difference as well as their individual quark and lepton difference. The long string of elements written here, following this sentence, is sorted by the number of protons each have starting from the element of hydrogen, which has one proton, then continuing with the element helium with two protons, and then so on (known elements 1 - 118).

Hydrogen (H), Helium (He), Lithium (Li), Beryllium (Be), Boron (B), Carbon (C), Nitrogen (N), Oxygen (O), Fluorine (F), Neon (Ne), Sodium (Na), Magnesium (Mg), Aluminum (Al), Silicon (Si), Phosphorus (P), Sulfur (S), Chlorine (Cl), Argon (Ar), Potassium (K), Calcium (Ca), Scandium (Sc), Titanium (Ti), Vanadium (V), Chromium (Cr), Manganese (Mn), Iron (Fe), Cobalt (Co), Nickel (Ni), Copper (Cu), Zinc (Zn), Gallium (Ga), Germanium (Ge), Arsenic (As), Selenium (Se), Bromine (Br), Krypton (Kr), Rubidium (Rb), Strontium (Sr), Yttrium (Y), Zirconium (Zr), Niobium (Nb), Molybdenum (Mo), Technetium (Tc), Ruthenium (Ru), Rhodium (Rh), Palladium (Pd), Silver (Ag), Cadmium (Cd), Indium (In), Tin (Sn) Antimony (Sb), Tellurium (Te), Iodine (I), Xenon (Xe), Caesium (Cs), Barium (Ba), Lanthanum (La), Cerium (Ce), Praseodymium (Pr), Neodymium (Nd), Promethium (Pm), Samarium (Sm), Europium (Er), Gadolinium (Gd), Terbium (Tb), Dysprosium (Dy), Holmium (Ho), Erbium (Er), Thulium (Tm), Ytterbium (Yb), Lutetium (Lu), Hafnium (Hf), Tantalum (Ta), Tungsten (W), Rhenium (Re), Osmium (Os), Iridium (Ir), Platinum (Pt), Gold (Au), Mercury (Hg), Thallium (Tl), Lead (Pb), Bismuth (Bi), Polonium (Po), Astatine (At), Radon (Rn), Francium (Fr), Radium (Ra), Actinium (Ac), Thorium (Th), Protactinium (Pa), Uranium (U), Neptunium (Np), Plutonium (Pu), Americium (Am), Curium (Cm), Berkelium (Bk), Californium (Cf), Einsteinium (Es), Fermium (Fm), Mendelevium (Md), Nobelium (No), Lawrencium (Lr), Rutherfordium (Rf), Dubnium (Db), Seaborgium (Sg), Bohrium (Bh), Hassium (Hs), Meitnerium (Mt), Darmstadtium (Ds), Roentgenium (Rg), Copernicium (Cn), Ununtrium (Uut), Unuquadium (Uuq), Ununpentium (Uup), Ununhexium (Uup), Ununseptium (Uus), and Ununoctium (Uuo)

There are many different groups and families to these elements. Alkali metals, alkaline earth metals, lanthanides, actinides, transition metals, other metals, metalloids, other non-metals, halogens, nobel gases, and unknown properties are the basic groups listed on the chart. These groups have different properties and characteristics concerning physical appearance, density, electrical conduction (electro-negativity and electro-positivity), electron shell construction, melting and boiling points, toxicity, and radioactivity.

## (Level 4) Chemical compound

*Objects vary in dimensions*

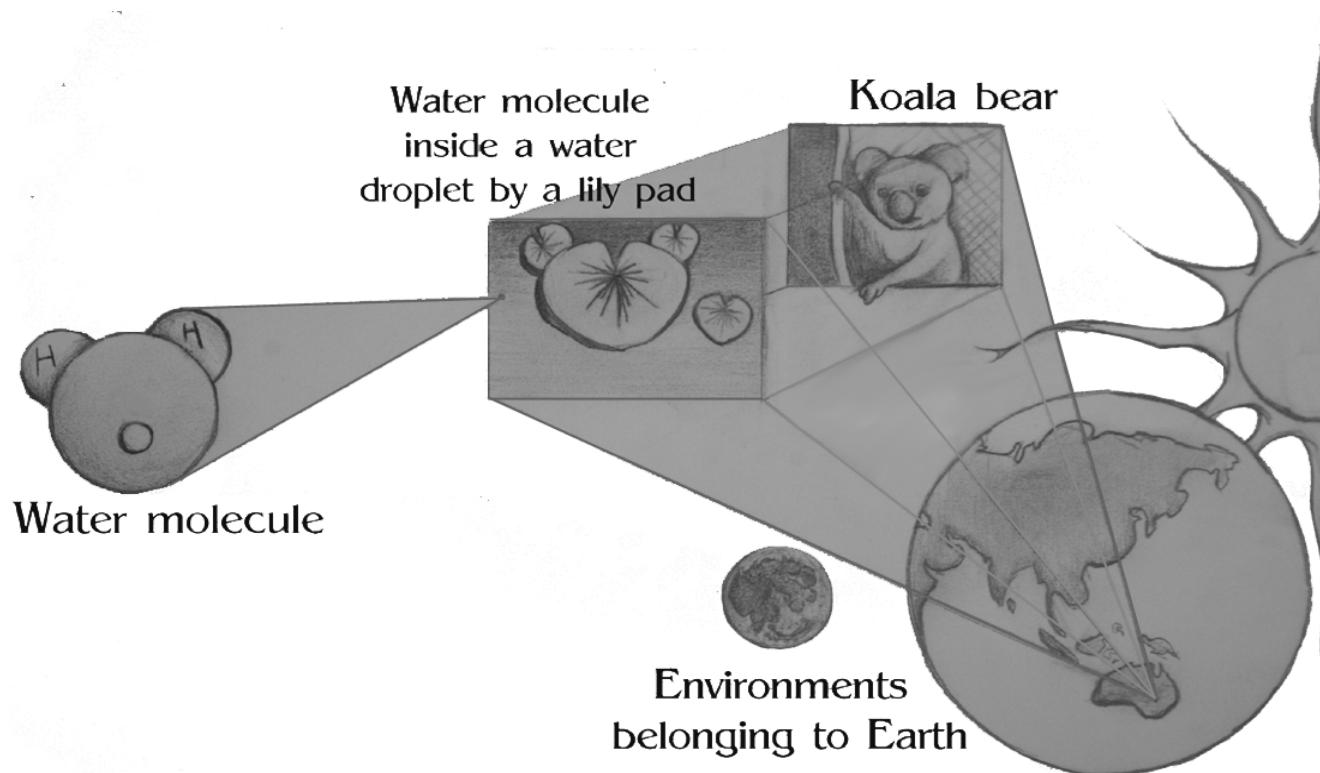

A molecule is the smallest indivisible part of a chemical compound. Two hydrogen atoms and one oxygen atom create one water molecule, which is then repeated over and over again. Water is the most abundant compound on the surface of the Earth, which is said to be some 70% while taking form as a solid, liquid, and a gas.

Chemical compounds are the result of conjoining base elements together to create a new chemical structure through a chemical bond. Chemical compounds are the result of combining possibility. We could only start to list them with the magma, the crust, the soils, the crystals, the minerals, the waters, the gases, the salts, the plants, the trees, the animals, the humans, the clothes, the tools, the foods, the plastics, the machines, and the so many other 'things'. The wealth of information concerning this level is grand and is practically everywhere.

## (Level 5) Environments

*Places vary in dimensions*

Whether you want to categorize these regions across the globe by the names of continents and countries or by the structural integrity, these collections of objects which develop an environment are prominent to each and every one of us. There would be a different perspective depending on the immediate surroundings, like mountains, oceans, forests, plains, farmlands, islands, swamps, deserts, caves, riversides, seas, lakes, and the many other terrains more familiar to us. The plentiful environments harbor the backdrops for the immense human-made kingdom, animal kingdom, and plant kingdom both above and below water. The collection of these interconnecting environments is what completes the surface of the earth and then there is also what is underneath the surface. These environments are local to this planet here in this circle, however, there would be other alien environments localized with their planets in their own circles as well.

## (Level 6) Earth

*510,100,000,000 square meters*

This floating piece of transformed rock called planet Earth is the combined collection of operating ‘things’ as we know, including all under the sun, under the ozone layer, and within the ecosystem. A 360 degree grid of latitude and longitude, measured in time zones with each degree representing sub circles for exact coordinates. Out of a family of planets, it is the third from the Sun. This giant magnetic field is basically two parts, the solid earth and the atmosphere.

The solid mass is composed of about 32% iron, 30% oxygen, 15% silicon, 14% magnesium, 3% sulfur, 2% nickel, 1.5% calcium, 1.4% aluminum, and the rest of the mass combines together with the rest of the unsaid elements. The atmosphere is composed of about 78% nitrogen, 21% oxygen, 0.93% argon, 0.04% carbon dioxide and very little amounts of others gases.

The land mass of the continental crust covers one-third of the planet’s surface. The land mass covered by the ocean is the oceanic crust which covers two-thirds of the planet’s surface area. The majority of the ocean is still unclassified and unknown. The seven continents and the four oceans can closely sum up the surface. The amount of circles needed to represent the surface is much more than what can be generalized in a few statements.

All global communication, networking, art, language, mathematics, music, cultures, governments, and so on and so on operate on this planetary sphere. Also included is everything in every one’s daily life like the recreational hobbies chosen to enjoy, the jobs being worked, the news across the world to every local newspaper, the wide variety of school curriculum, the books of the world with their numerous titles and categories, the fish jumping out of the water for a split second, and the falling tree, making a sound with no one around to hear it.

The wealth of information for Earth is ever expansive. Describing Earth starts from the mostly suggested solid inner core, to the molten outer core, to the D” Layer, to the lower mantle, to the transition region, to the upper mantle, to the crust, to the surface, to the biosphere, to the troposphere, to the stratosphere, to the mesosphere, to the thermosphere, and finally ending in the space boundary of the exosphere. While keeping in mind the satellite of the earth, the moon is a floating collection of environments to create an independent sphere. The moon maintains to be a combined piece of debris orbiting perpetually around the Earth with thirteen phases during the course of one year, approximately 28 days each ( $13 \times 28 = 364$ ). The clockwork of time would be much more seamless and harmonized if the human population could learn to adapt to a calendar system with thirteen months.

## (Level 7) Solar System

15,137,168,756,129,000 meters wide

The object in the center of our solar system is the revered sun. The sun is an 865 million miles wide huge nuclear ball which changes hydrogen to helium constantly and gives way for the release of energy onto planet Earth. Without this energy from the sun, life would have had to form under much different conditions.

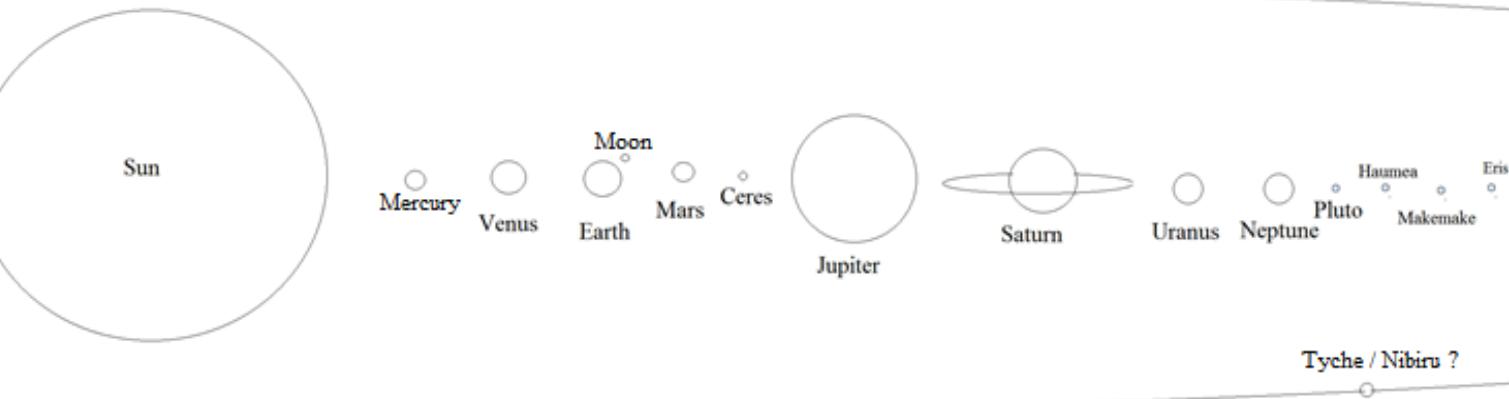

The inner planets which orbit around the sun, starting from the closest, are the planets of Mercury (named after the Roman god of travel / the Greek counterpart is Hermes), Venus (named after the Roman goddess of love / the Greek counterpart is Aphrodite), Earth (not named after a mythological god), and Mars (named after the Roman god of war / the Greek counterpart is Ares). Ceres (named after the Roman goddess of agriculture, human fertility, and motherly love / the Greek counterpart is Demeter) is considered a dwarf planet and is the largest asteroid in the asteroid belt. The outer planets are the gas giants of Jupiter (named after the Roman god of gods / the Greek counterpart is Zeus), Saturn (named after the father of Jupiter / the Greek counterpart is Chronos), Uranus (named after the Greek god of the sky and heavens / the Roman counterpart is Caelus who is both the grandfather to Jupiter and father to Saturn), and Neptune (named after the Roman god of the sea / the Greek counterpart is Poseidon) follow.

Around the area beyond Neptune is said to be the Kuiper Belt. The Kuiper Belt resembles the asteroid belt except it is roughly 20 times larger. This belt of icy objects has at least 3 dwarf planets within its range. These planets are named Makemake (named after the Polynesian creator god), Haumea (name after the Hawaiian goddess of childbirth), and Pluto (named after the Roman god of the underworld / the Greek counterpart is often referred to as Hades). Beyond that is another dwarven body of mass called Eris (named after the Greek goddess of strife and discord / the Roman counterpart is Bellona) which is slightly bigger than Pluto. The many moons orbiting these planets are named mostly in some relation to the planet it belongs to.

Beyond that, the start of the edge of our solar system is said to be the Oort Cloud. This is said to be a spherical belt, an inner and outer halo of an estimated number of trillions of icy objects, supposedly made of water, methane, ethane, carbon monoxide, and hydrogen cyanide. Hypothetically there is a gas giant planet existing in the Oort Cloud nicknamed 'Tyche' which has also been claimed in some material to be the planet Nibiru of Sumerian reference, although this is not likely.

Alongside the outer perimeter of the Oort Cloud exists the heliosphere. This is said to be the invisible bubble surrounding the solar system encompassed by the sun's solar reach. The point to where the sun's solar winds stop to mix in with the interstellar medium of the energetic winds from other celestial objects in the universe. This area of the sun's extent has been termed 'termination shock'.

99.9 percent of the mass of the solar system is in the sun, the sun weighs 300,000 more times than the earth.

## (Level 8) The Milky Way

*851,465,742,532,300,000,000 meters wide*

The solar interstellar neighborhoods of our galaxy continue to reveal the immeasurable number of energy particles there are.

According to NASA, somewhere around 100-400 billion stars exist within this orbiting galaxy system and some 50 billion planets, 500 million of which are estimated to be within a habitable distance from a star.

There is said to be Sagittarius A, the super massive black hole in the galactic center. Immediately around the galactic center is said to be the nuclear bulge which is a spherical cloud of compacted stars. Spiral arms extend out from this bulge in course with their rotation around the center. The rotating disc this creates in our galaxy contains the majority of stars. The entirety of the galaxy can be said to be held within a spherical boundary containing all of its parts.

Within our galaxy, the arms have been classified as Norma Arm, Centaurus Arm, Sagittarius Arm, Orion Arm, Perseus Arm, and Cygnus Arm. Each arm replicates a pattern of phi and creates logarithmic spirals around the center of the galaxy. These arms are prominent because of the trail of light by their bright stars. There are just as many stars coexisting between the arms as there is in them although they are not as apparent. Our sun, with its solar system companions, lies with the Orion Arm. The location of our solar system in relation to the Milky Way and its center is roughly two-thirds of the way out from the center to the tip of the Milky Way arms.

There are many types of galaxies within our universe, each one of them with their own components and complexities. The major galaxies can be classified as follows:

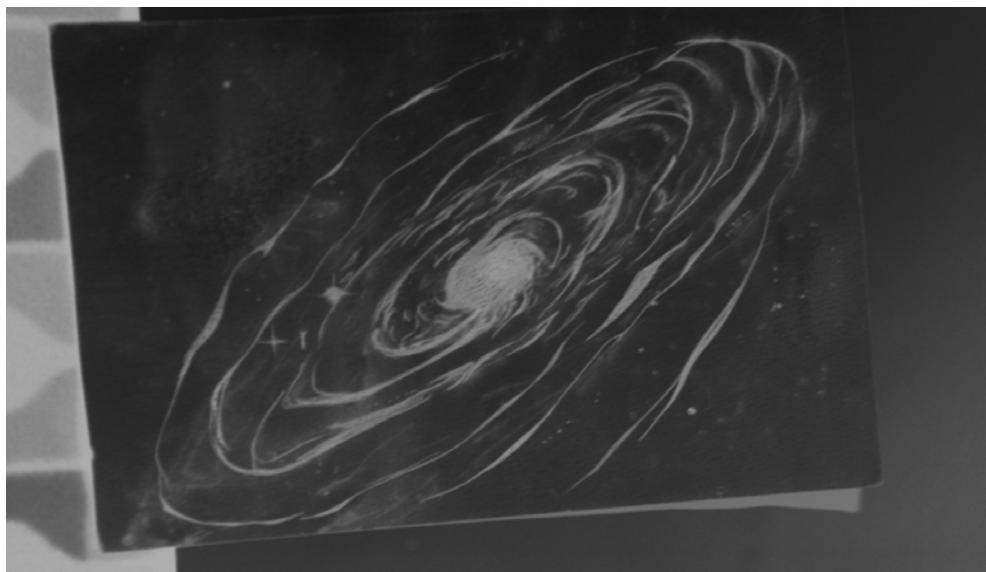

Elliptical galaxy - a smooth and featureless orb of light with a variable number of stars in an elliptical shape

Spiral galaxy - a disc containing a center bulge with trailing arms, leaving their star trails of movement

Lenticular galaxy - a disc containing a bulge without spiral arms, but instead smooth luminous star light

Irregular galaxy - structure-less and near structure-less, these have chaotic and unsymmetrical appearances

It is guessed that 90 percent of the Milky Way galaxy mass is in the core.

## (Level 9) Local Group

94,605,284,050,000,000,000,000 meters wide

The collections of galaxies closest to us belong to a system of galaxies called the Local Group. The Local Group consists of more than 30 galaxies with 3 main ones, the Milky Way Galaxy, the Andromeda Galaxy, and the Triangulum Galaxy. The center of the Local Group is said to be between the Milky Way Galaxy and the Andromeda Galaxy, as these two galaxies work as a binary system attracting each other gravitationally. The entirety of this Local Group circle is what is affected by this gravitational pull.

The known sub groups of the Milky Way satellite galaxies are:

Canis Major Dwarf, Sagittarius Dwarf, Large Magellanic Cloud, Small Magellanic Cloud, Ursa Major II Dwarf, Ursa Minor Dwarf, Draco Dwarf, Sculptor Dwarf Galaxy, Sextans Dwarf, Carina Dwarf, Ursa Major I Dwarf, Fornax Dwarf, Leo II, Bootes I, Bootes II, Bootes III, Coma Berenices, Sequoia 2, Canes Venatici I, Canes Venatici II, Hercules, and Pisces

The known sub groups of the Andromeda's satellite galaxies are:

M32, M110, NGC 185, NGC 147, Andromeda I, Andromeda II, Andromeda III, Andromeda IV, Andromeda V, Pegasus Dwarf (Andromeda VI), Cassiopeia Dwarf (Andromeda VII), Andromeda VIII, Andromeda IX, Andromeda X, Andromeda XI, Andromeda XII, Andromeda XIII, Tidal Stream Northwest, and Tidal Stream South West

Each one of these galaxies is comprised of their own smaller properties within them.

## (Level 10) Virgo Super Cluster

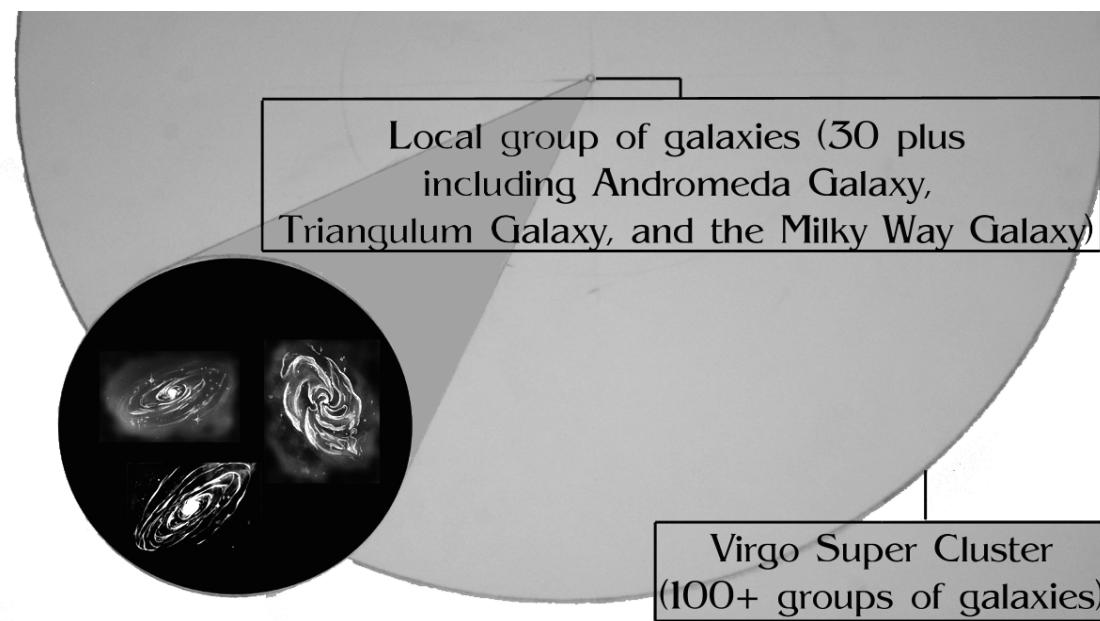

1,040,680,351,984,000,000,000,000 meters wide

The immensity of these scales gets increasingly harder to describe in words. This super galactic plane we are a part of holds at least 100 groups of galaxies, with our Local Group as a single one of them. Each of these groups of galaxies holds their own levels of circles within them. Multiplying a lot by a lot remains to be the steady theme of these constructions. This structure is said to be a disc of vibrant galaxies held within a somewhat spherical type of field. The flow of these epic structures within this super cluster is said to be held together by a gravitational anomaly called the 'Great Attractor'.

Supposedly there is a super massive black hole in the center of the super cluster. As seen by the Hubble Space Telescope, there is an incredible jet streaming in the middle of the Virgo cluster spanning 47,303,652,362,900,000,000 meters long. This is said to be comprised of the matter falling into a magnetic black hole and then transforming outward into a condensed trail of electrons and sub atomic particles. It is a wonder to think if ninety percent or so of the super cluster's mass is there.

List of 160 largest galaxies in Virgo system

IC 755, NGC 4037, NGC 4064, NGC 4124, UGC 7170, NGC 4152, NGC 4168, NGC 4178, NGC 4189, M98, NGC 4193, UGC 7239, NGC 4197, IC 3061, NGC 4206, NGC 4212, NGC 4216, NGC 4215, NGC 4222, NGC 4224, NGC 4233, IC 3099, NGC 4235, NGC 4237, IC 3102, M99, NGC 4260, NGC 4261, NGC 4262, NGC 4266, NGC 4267, NGC 4270, NGC 4273, NGC 4293, NGC 4294, NGC 4298, NGC 4302, NGC 4305, NGC 4307, NGC 4309, NGC 4312, NGC 4313, NGC 4316, M100, NGC 4324, NGC 4330, NGC 4336, NGC 4339, NGC 4340, NGC 4343, NGC 4350, NGC 4351, NGC 4352, NGC 4356, NGC 4365, NGC 4371, M84, NGC 4379, NGC 4378, NGC 4380, M85, NGC 4383, IC 3322A, NGC 4388, IC 3322, NGC 4394, NGC 4396, NGC 4402, M86, NGC 4411A, NGC 4413, NGC 4411B, NGC 4417, NGC 4419, NGC 4421, NGC 4423, UGC 7557, NGC 4424, NGC 4425, NGC 4430, NGC 4429, PGC 40821, NGC 4435, NGC 4438, NGC 4442, NGC 4445, NGC 4450, IC 3392, NGC 4452, NGC 4459, NGC 4461, NGC 4469, M49, NGC 4473, NGC 4474, NGC 4477, M87, NGC 4488, NGC 4492, NGC 4497, NGC 4498, M88, NGC 4503, IC 3476, NGC 4519, NGC 4522, NGC 4523, NGC 4526, NGC 4531, NGC 4532, NGC 4535, NGC 4539, NGC 4540, M91, NGC 4550, M89, NGC 4564, NGC 4567, NGC 4568, IC 3576, M90, NGC 4570, NGC 4571, NGC 4578, M58, NGC 4580, NGC 4596, NGC 4606, NGC 4607, NGC 4608, NGC 4612, M59, NGC 4623, NGC 4633, NGC 4634, NGC 4638, NGC 4639, NGC 4647, M60, NGC 4651, NGC 4654, NGC 4660, IC 3718, UGC 7943, NGC 4689, NGC 4694, NGC 4698, NGC 4710, NGC 4713, NGC 4733, NGC 4746, NGC 4754, NGC 4758, NGC 4762, UGC 8032, IC 3881, UGC 8085, NGC 4866, and NGC 4880

## (Level 11) Hyper cluster (theoretical)

*Unknown size*

This is a hypothetical structure divided by voids of space which hold together groups of super clusters. If this is to be the case, there would have to be some gravitational anomaly similar to that of a super cluster structure on a larger scale. We are limited by our scientific instruments to observe proof of such a thing. By pretending the probability of this structure into existence, we can then begin to say what it is comprised of.

Other super clusters besides our own would inevitably belong to this hypothetical circle. The following names are a portion of super clusters in the local galactic super cluster galaxy map:

Capricornus Super cluster, Ophiuchus Super cluster, Corona-Borealis Super cluster, Hercules Super clusters, Pavo - Indus Super cluster, Centarius Super cluster, Shapley Super cluster, Bootes Super clusters, Hydra-Centaurus Super cluster, Sculptor Super clusters, Pisces - Cetus Super clusters, Coma Super Cluster, Ursa Major Super cluster, Perseus - Pisces Super cluster, Phoenix Super cluster, Sextans Super cluster, Columba Super cluster, and Horologium Super cluster

The immense scales of these proportions and the prolific information concerning them are overwhelming and mind boggling. Any further investigation should be continued at the heart's desire.

## (Level 12) Observational / Known Universe

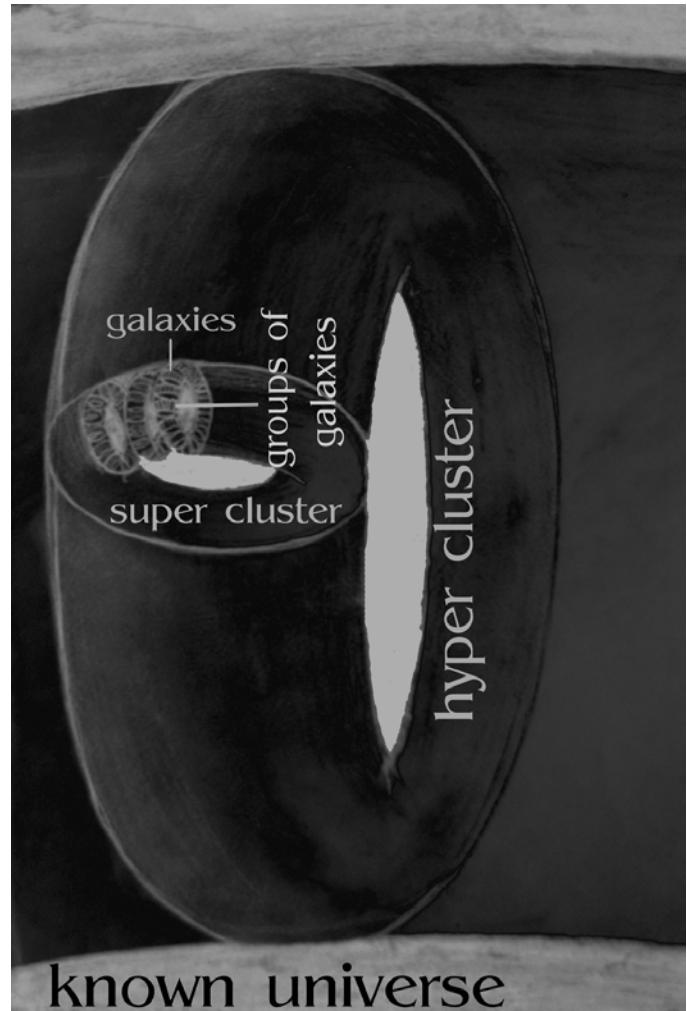

*Unknown size*

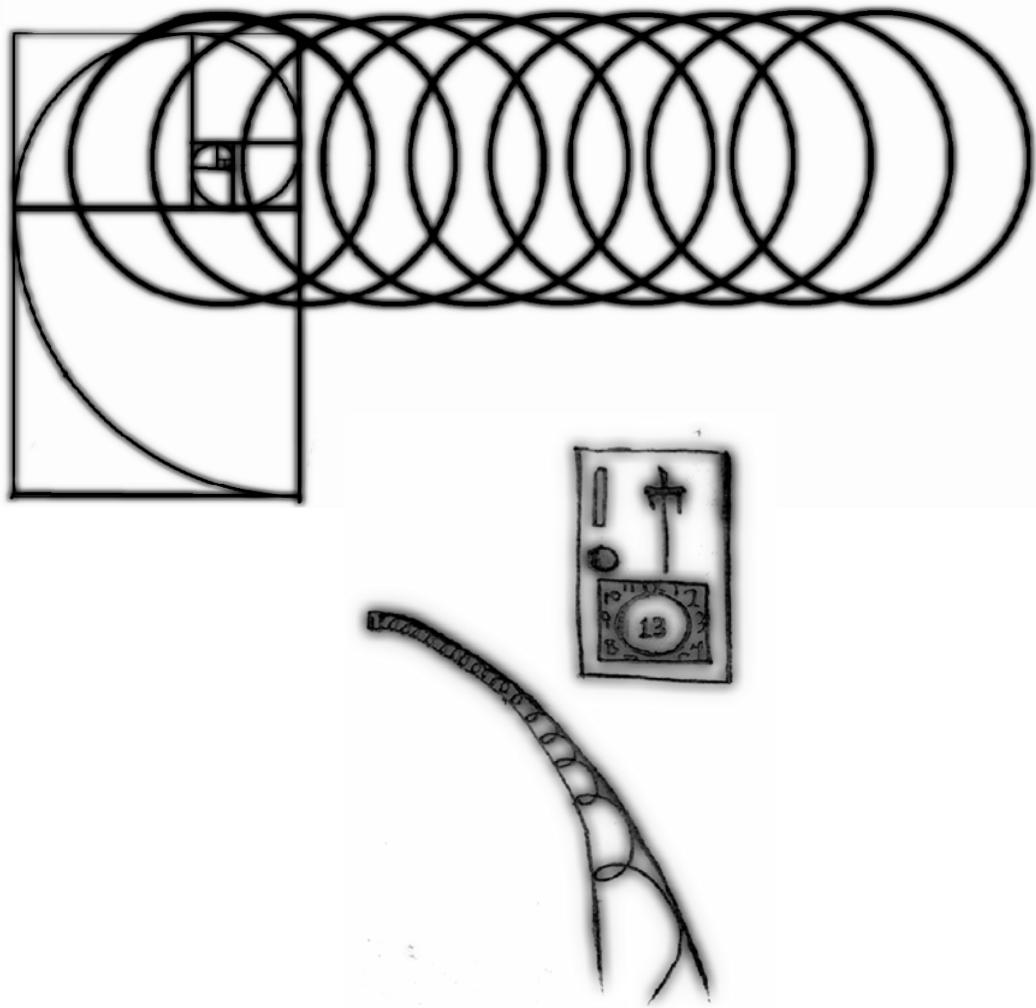

The Great Wall is said to be the largest super structure in the known universe. It is described as a panel of galaxies 200 million light years away spanning more than 500 million light years long, 200 million light years wide, and 15 million light years thick. This structure was discovered in 1989 by Margaret Geller and John Huchra based on red-shift survey data.

The combination of these super structures and whatever else might be larger can conclude loosely of the construct of our universe. This big bubble of galactic stuff which is apparently empty space within empty space within empty space yet full of discovery and adventure at the same time. All of the systems within, all of the levels of circles are insanely intricate to say the least. If the universe is expanding equally outward in all directions, making a growing sphere, the things within it are always subject to change. There is likely to be more regions beyond what we can ever observe and the accumulation of the entirety of the universe will probably not ever be fully realized in human means.

What has been observed and documented about the universe already is tremendously epic in scale. Ancient humans, for one example, have made art out of patterns in the luminous sky with the constellations, those we associate ourselves with and also the ones we dismiss. It is estimated that there are 200 billion galaxies. Within each single galaxy there is estimated to be an extraordinary number of stars ranging from hundreds of millions to hundreds of billions to even trillions. The sheer magnitude of possibility in the wake of these numbers proposes an open ended investment for further research and study.

During the life and death of this universe, alterations will occur alongside with the measurement of time. The number of these objects is uncountable and it would take a lifetime to write a number to respectfully compare to the number of material locations there are. However large of a number you could produce, infinity is still more than that number squared by itself.

*Every page is like opening a new door,  
tunneling around the circle of a wormhole*

Looking at the lifespan of time sideways would give the appearance of an aged ring. Looking closer would show a spinning line spiraling through the edge of the circle. Looking at the tunnel head on would give the appearance of looking down the corridor of a circle and the visible vortex would be the ongoing swirling line in the distance. The circle is also the spiral and time feels as though we are going through the process of this, whatever this process may be.

### Time levels

Reverse the direction of the circles in the previous space levels and you can then visually zoom in to single units of time based on any location specified within the universe. Measurements of time are held within each other relatively based on the entire movement of large objects in space. The above illustration shows how massive objects in motion create the time frame constructs of our daily lives. The expansion of the universe from birth to death can be viewed as a circle which may also be part of a larger time frame, therefore extending the limit of levels. A larger loop holding a number of universes would be presumed to reenact the shape of a sphere, a circle, and a line.

- Time Level 13** Whole Universe from birth to death (ages of circles vary depending on who you ask)
- Time Level 12** Known Universe expanding as a sphere
- Time Level 11** Hypothetical Hyper Cluster - held together with a larger scale 'Great Attractor'
- Time Level 10** Virgo Super Cluster spinning around the center of a super massive black hole
- Time Level 9** Local Group spinning as a binary galaxy with Andromeda through space
- Time Level 8** Milky Way spinning with its spiral arms around the Sagittarius A black hole
- Time Level 7** Solar System – orbiting alongside the Orion Arm around center of Milky Way  
 (estimated around 226 million years to orbit once)
- Time Level 6** Earth – Orbiting around the Sun (1 year to orbit, 365 days, 52 weeks, or 12 months)
- Time Level 5** Number of days of the month
- Time Level 4** 24 hours of the day
- Time Level 3** 60 minutes for each hour
- Time Level 2** 60 seconds for each minute
- Time Level 1** Divisions of a second
- Time Level 0** Planck's Time (light)

The breakdown of each month would show approximately four weeks divided by the seven individual days. These days are named Sunday (named after dies solis, the Sun), Monday (named after Luna, the Moon), Tuesday (named after the counterparts of Mars / Ares and Tyr / Tiu) Wednesday (named after the counterparts of Mercury / Hermes and Odin / Wodan), Thursday (named after the counterparts of Jupiter / Zeus and Thor / Thunder), Friday (named after the counterparts of Venus / Aphrodite and Frigg / Freyja), and Saturday (named after the counterparts of Saturn / Chronos).

### Constructs of time

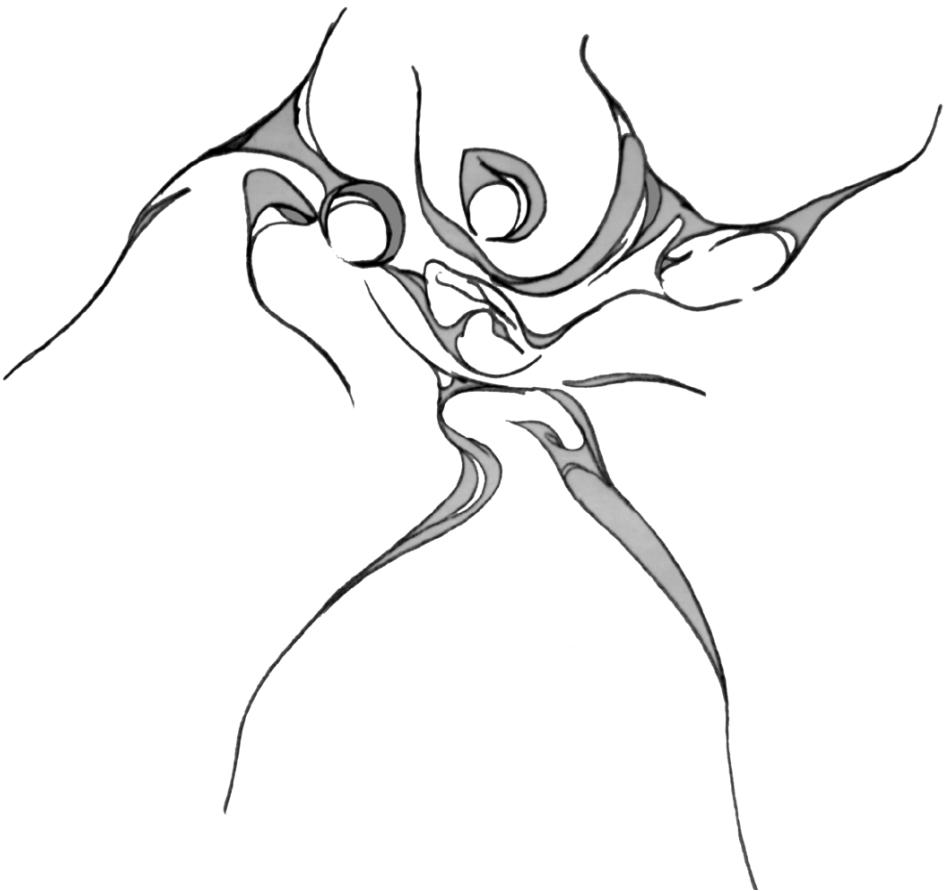

Describing the act of turning pulsating light into units of measure would explain the operations of the creation of an instant. Every new second builds a new minute, every new minute builds a new hour, every new hour builds a new day, every new day builds a new year, every new year builds a new solar year, and every solar year helps build a young universe. With the chain reaction of possibility leading the way, individuals collectively share an experience of observation alongside this timeline of events.

The most ideal way to visualize how these wheels move in motion in relation to each other is to think how every moment is a new circle being continually added to a tremendously long string of collective events. Whether or not the location is here or there, everything in this universe is continually happening as of right now. Whether the 'time' is labeled ante meridian (A.M) or post meridian (P.M.) on this side of the world or that side, or even on this side of the universe or that side, the collective movement of time is still happening altogether as of right now. These spokes each build the units of time which in return become the gears to the natural history. The natural history makes up the machine of the universe and one could wonder how many machines and gears there are outside of this time construct which would probably appear to be similar in design.

When trying to determine the age of when material was first manifested many notable observations must be taken into account, like the rotation of major and minor objects. The start and end of a universe can be measured by this history of structural movement within. The orbiting gears detail the shared collective reality and imply a starting point for different types of creation. The history of events within the footprint trail of our spiral galaxy barreling through space is only a sliver of what can be properly acknowledged. The life span of an observing human body in this shared time only grants somewhat of an ability to try to scope something with a life span of at least many billions of years more. The layered puzzle pieces of the incalculable number of galaxies only start to describe where the All even begins.

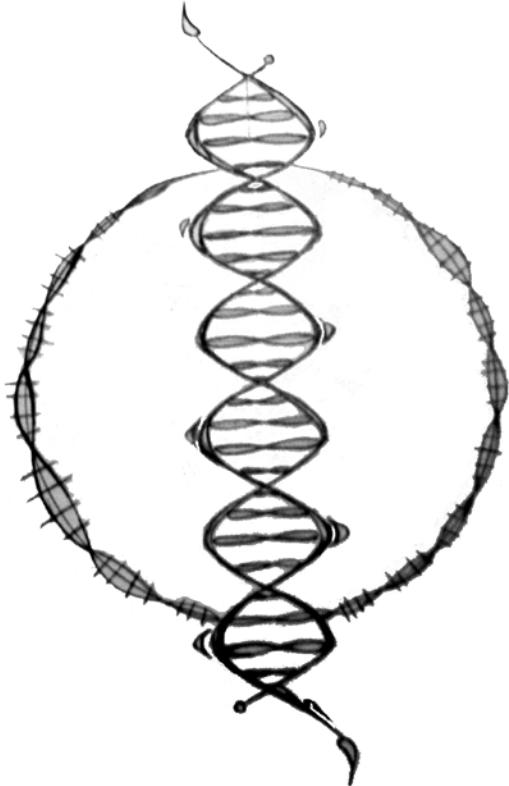

The momentums of the galactic pathways warp the plasma of space, leaving history with every pulsation. The actual moments and the imaginative moments curving space will inevitably cause a ripple effect to create an invisible record of frequency vibrations. The sound of a tree falling in a forest will always echo no matter how faint and distorted the sound becomes because if it happened once then it always will be. Witnessing the reverberation, however, is a gift and the echo of the event happens anyway without any immediate observation. An invisible record would go to show the vibrations of the trees which fell along with all of the other unobserved vibrations of unnoticed objects.

A master coded system of fate operating throughout all of the intertwining DNA patterns of organisms would be an extremely complicated picture to detail. Fate would be dictated by the circles we have yet to walk into, those which are scripted, waiting in the future until they come to pass. Free will would be the circles ahead of us acting as a grid of blank empty canvas' which would manifest together to form a giant ongoing picture with all of our combined directions. How effective can the ability of free willed thought be to override the restrictions of a programmed fate? The clash of the two would bring up even more questions, like would the will of one circle create the fate of another and if there weren't any arms of the clock of time, would there even be such things as fate and free will? Infinity in infinite form would include all instances to happen all the time, every time, thus making fate and free will secondary.

### *Transfiguration of a stick figure*

*As the supernormal evolution of mindsets continues, our aptitude in our chosen facets shall proliferate beyond the limitations of any traditional set of governing laws. When we allow ourselves to understand the illogical essentials we will then be able to understand the unrealistic planes of existence. In the terms of the future past, just let yourself dream, just let yourself be.*

## Life Gadgets

Deoxyribonucleic acid is a meta-molecule

This meta-molecule is many stacked molecules

These stacked molecules form a spiral double helix

With pockets in between, giving possibility a chance to breathe

The structure looks like a spinning ladder

Each side is made of a sugar phosphate cord

Alternating the elements in each of the segments

Held together with ever-shifting weak electrical filaments

In the middle with many multiple rungs

The chemical pairs of nucleosides coincide

With only four different kinds of sequences

Of Adenine with Thymine and Guanine with Cytosine

The diverse sets of nucleotides exist

Combining all together to make life live

Sets of crystals, chemically fortified within

Phosphorus, carbon, oxygen, nitrogen, and hydrogen

## Integral operations

If matter is the fundamental building blocks for physical things, then Deoxyribonucleic acid (DNA) is the fundamental building blocks for life forms. DNA is a type of a nucleic acid. The common bond between all living things starts here. Just as if there was once a singular point of energy, there appears to be a universal ancestor which the very first cells came from. Sometime after the time when matter cooled and organized itself in a livable fashion, life miraculously began. Just how or why a bunch of leptons and quarks intertwined together to become the essential ingredients for life is the question. The coded secrets of life are an incredibly interesting aspect when exploring the basics of the pieces to the grand puzzle.

Deoxyribonucleic acid (DNA) is the multi-molecular structure holding all of the genetic instruction for the construction of a living organism. It is the ultimate user manual for any specific organism, but it is written in a much different language. The codes are arranged in a simple combination of G, T, A, and C's. The hefty amount of information within this multi-molecule depends on which specific organism it belongs to. The complete set of genes for an organism is called its genome. Each species have similar genetic traits along with the minor exceptions according to their genome. Animals with the same kind of limbs will have the same genetic codes which build those limbs. Genetic mutations are a result of improperly coded genes when incorrect data is transferred among the cells of a specific living organism.

This multi-molecule of DNA is, as mentioned, a double helix ladder structure built of a 'backbone' of sugar (deoxyribose) and phosphate, and the rungs. The rungs are built of two coupled nitrogen bases. There are only four nitrogen bases common in DNA. These four nitrogen bases are (G) guanine, (C) cytosine, (A) adenine, and (T) thymine. Each of these nitrogen bases is made of different molecular structures. The arrangement of these four nitrogen bases within the sides of the double helix is the only difference between all living things with DNA.

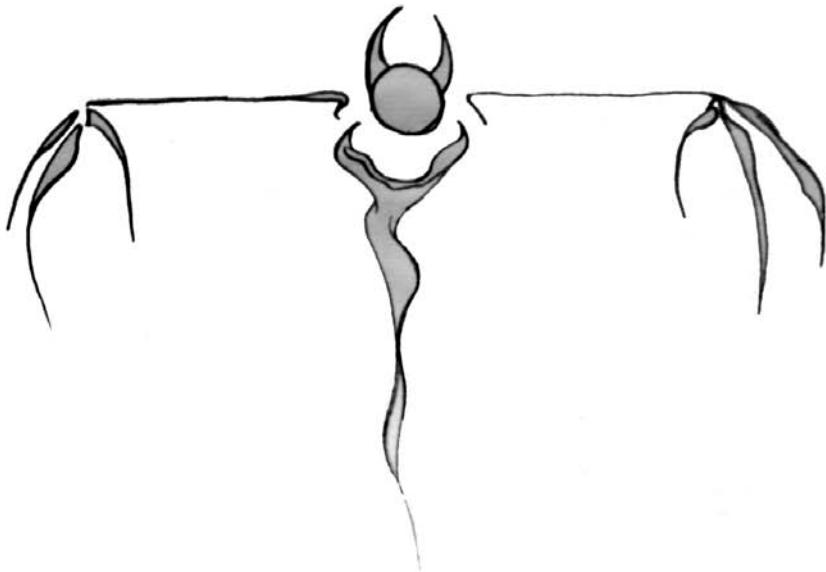

These nitrogen bases can only couple together in a certain way because of their chemical shape. The molecules of guanine and cytosine go with each other and the molecules of adenine and thymine go with each other. Guanine and adenine are purines, and cytosine and thymine are pyrimidines. So this means there is only one out of four possible rungs which can be made. They can be either a (G)(C) combination, a (C)(G) combination, an (A)(T) combination, or a (T)(A) combination. Since purines and pyrimidines go together respectfully, only half the ladder is needed to complete the other half. By process of elimination, there is only one possible other side to assemble in retrospect to their codes. The two halves of each rung are held together by a weak interaction electrical bond.

When stacking these rungs on top of each other in between a two-sided backbone, you will end up with a super long molecule with a diverse set of codes. This super long molecule holds these codes of GC, CG, AT, TA in combination. Total, there are around 3 billion individual pairings of nitrogen bases of GTAC. A set of three of these codes in sequence is called 'codon'. A sequence of codons will create an amino acid. The 20 amino acids are Isoleucine, Leucine, Valine, Phenylalanine, Methionine, Cysteine, Alanine, Glycine, Proline, Threonine, Serine, Tyrosine, Tryptophan, Glutamine, Asparagine, Histidine, Glutamic acid, Aspartic acid, Lysine, and Arginine. These amino acids are built out of a combination of 64 different codons. Humans are said to have around 35,000 genes. Each gene is built of a different number of amino acid sequences to develop certain specific traits.

An assortment of amino acids will go on to produce a limitless assortment of proteins and chemical necessities. These will build all structural components of a living organism and all the different kinds of chemicals needed to regulate, metabolize, and sustain the life of that organism. How this process comes to be is very complex, but basically how this is done is the DNA replicates itself in the form of RNA to do its bidding. Ribonucleic acid is a single strand of nucleic acid, or rather, half of a ladder of a genetic sequence. RNA is used to carry out the instructions of the DNA code. Segments of the DNA will copy the coded instructions by 'unzipping' the hydrogen bonds portion of the ladder in order to make strands of RNA. This copied single strand of RNA goes on to make the amino acids as directed and when directed. When referring to RNA, (U) Uracil substitutes for (T) Thymine, which (A) Adenine then becomes the counterpart in the DNA-RNA sequences.

Messenger RNA (mRNA) is the copied string of DNA which leaves the nucleus of the cell to find the ribosome production site. Once these messenger molecules locate the ribosome somewhere in the cytoplasm of the cell, the mRNA string implants itself in them for the process of protein synthesis. Within the ribosome, the codons of the mRNA get decoded and translated with their attracting counter parts to form specific amino acids. Also within the ribosome, the mRNA becomes transfer RNA and ribosomal RNA according to their instructions. Almost like the shipping and receiving procedure of a warehouse, transfer RNA (tRNA) delivers the amino acid to their proper protein production site. Ribosomal RNA (rRNA) is the production site itself for converting the mRNA into actual amino acids. An uncountable number of mRNA strands come into existence as the template DNA double helix unzips portions of itself to duplicate the specific codes to ever concurrently produce amino acids during the life of the living organism. The simplified formula presented by many is DNA = RNA = Proteins. Within this stimulation of activity exchanges, energy is stirring constantly for the duration of a lifespan.

Only about 5% of the genetic sequence in our entire genome is said to be used. The 95% which isn't used has been often called 'junk' DNA. Little is known about these extra sets of codes. These codes apparently have no function in the process of building the construction of an organism. The term junk DNA will instead be called 'potential' DNA from here on due to the untapped understanding. Potential DNA is thought to play many roles, like assisting to build special chemicals and special proteins under special circumstances in which the organism needs it. The added length of the DNA strand is composed of these extra codes and structurally this is very important for the functionality of the overall process. This potential DNA might be a storehouse of exceptions. It could be a glass case, only to be broken into if needed in an emergency. It could be the limit of evolution as far as the programming codes are concerned. The definition of potential DNA will expand in parallel with the inclusion of ongoing inquiries and should be considered the opposite of useless junk when exploring all available possibilities.

### Integral productions

Elapse time in any location and interesting things are bound to happen. All sorts of different locations would tell a tremendous number of different stories. Blades of grass, shrubs, plants, flowers, redwood trees, and coral reefs are all individually amazing progressive forms with different rates of growth. Every single organism covering the shell of the world belongs to a system of a protein factory operation. The heights to which they evolve are only limited by the time it takes to reach the stars, propelled by the rate of survival and the avoidance of extinction which is often caused by the environmental interference of other species.

Each organism starts from a single cell with the many smaller mechanisms within which follows through with the genetic instructions to continue the ongoing transcription (DNA-RNA operations). Each cell contains the same instruction code book, but carries out different roles as directed by the DNA-RNA production. Life is the result of a single cell dividing and reproducing itself until the cells uniquely identify their roles to construct the living embodiment of a creature.

In the event of reproduction, a seed carrier cell of genetic information is fused together with an egg to begin to form an embryo. 1 becomes 2, 2 becomes 4, 4 becomes 8, 8 becomes 16, 16 becomes 32, 32 becomes 64, 64 becomes 128, 128 becomes 256, 256 becomes 512, 512 becomes 1024. While not the 1024 bits of a kilobyte, our genetically infused cells duplicate until parts form altogether to create the processes to sustain life. All at the same time, any specimen from their constructional origin point simultaneously creates the facilities in which it keeps to operate.

Epithelial tissue, connective tissue, muscle tissue, and nerve tissue all bind together

Organs are produced to self-sustain further systems

Sensory facilities assemble in preparation of usage

Being aware of our consciousness is a gift human's possess and experiencing a life by the way of our five bodily built sensory systems is somewhat of a game limited by our involvement. Our brain decodes the senses in our unique ways and the result is a type of cognitive organism. The motor cortices, the sensory cortices, the visual cortices, the auditory cortices, and the speech interpretation parts of our brain all combine together to operate the bio-electrical engine of the human body.

When formulating the human body, you have all sorts of circles within circles within circles. Each organ is a main component which harbors further complexities of the operation of the whole. The microscopic cells combine to produce larger systems of operation. The communication of the brain, heart, larynx, trachea, lungs, kidneys, liver, intestines, spinal cord, nervous system, bones, skin, eye balls, ear drums, olfactory organ, and taste buds all jump start on the exact same page of coded operation although carried out at different times when instructed to do so.

Slowly breathing in and slowly breathing out, while the trillions of blood cells carry oxygen around the body, is a splendid feeling. Unnoticed white blood cells, working to their capability and sometimes even beyond of what they are programmed to do, are continually at war throughout our daily lives. Each individual cell works as an operating gear and uniforms together to complete a functioning whole. The electrical stimulation of vibrating bits of electrons act as the driving force as we feed our body machines an assortment of nutrients and toxic elements. Our body absorbs the components and then the debris is removed accordingly. Within every second we regenerate and die to a certain degree. The human body is an unraveling mystery and is continually recreated with intermittent new peaks of potential.

## Once upon an abnormal genesis

During the restless state of antsy tectonic plates, chemical anomalies seemingly found each other to create the first simple organisms. Sugars and nucleic acids had somehow formed to be the building blocks of life. One can only wonder at the mystery of life as there is a wide range of possibilities, but the spark of life could have just as well been carried here by a meteor brought from the explosion of another planet. Creation theories aside, the millions of years passed as the formations of life developed further into more complexities. The fossil record shows the evidence of life throughout a measurable time frame.

These marvelous forms of life apparently started in the ocean right next to the volcanic pressure cookers of gases escaping to the surface. Micro-organisms became less micro and water based creatures diversified in their own exponential way throughout the many ages. The oceans, seas, rivers, and lakes gave way for a tremendous amount of available adaptation. Aqua life peaked constantly with schools of schools of fish, surrounded by other marine based organisms. Mostly undiscovered, even still, the throngs of water life sway in the shifting currents, leaving any evidence to be lost into the bottom of the ocean bed and turned into nutrition for other opportunists.

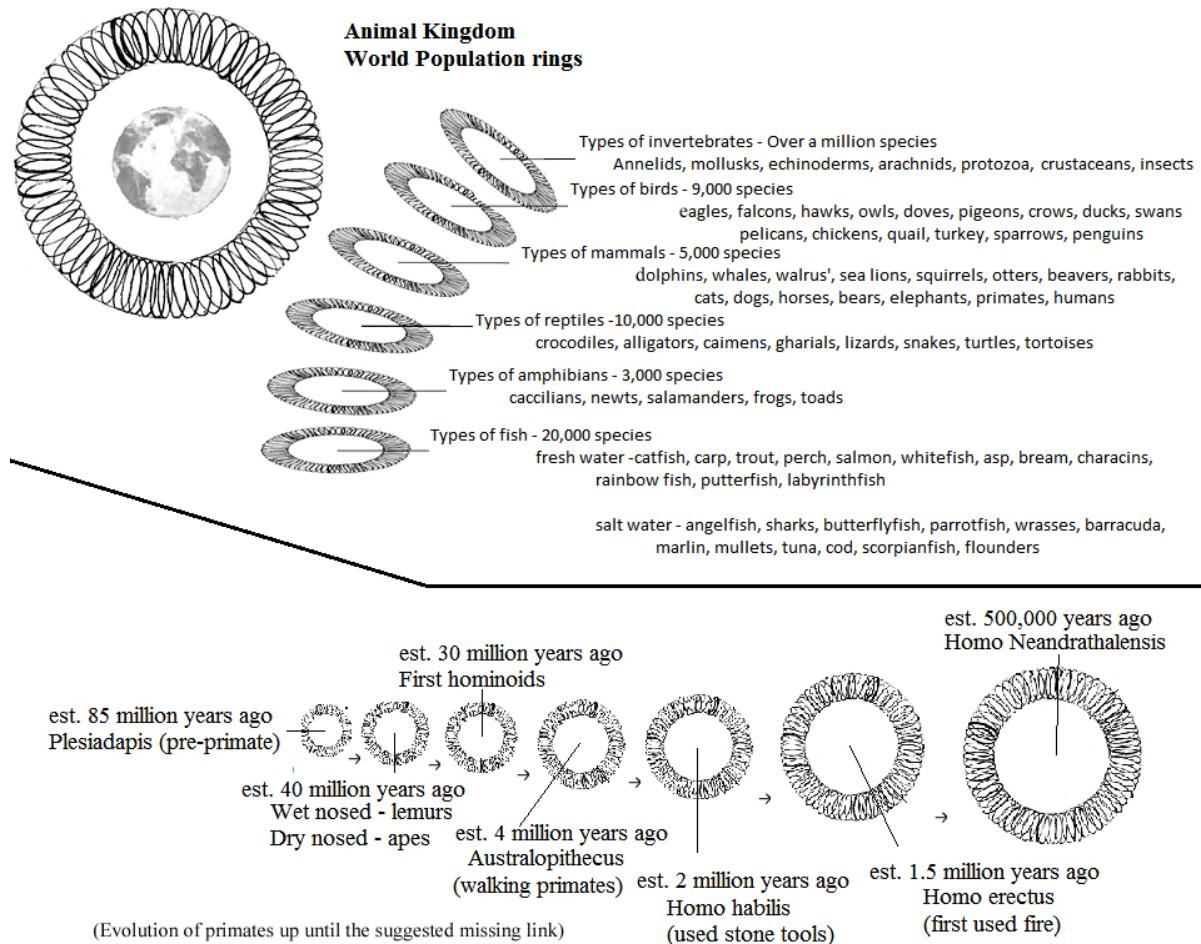

The progressively advancing alien shapes and forms were able to adapt to land and colonized the regions to their instinctive needs accordingly. The ever changing forms of water dependent organisms followed the green bread crumbs to become independent away from the water. The segmented worm, once adjusting to living off the land, branched into a number of various forms. When backboned fish willed themselves to land, fins became arms and four-legged creatures eventually developed. These new amphibious creatures joined the arena with the armies of insects which had already been birthed into existence. The unstoppable array of insect populations is and has been, by far, the most abundant of animals.

The altering terrain emerged with the vegetative brush and plants as they began to move inland in the wake of the new moist soil. The combination of wind and flying insects moving pollen from plant to plant further led the way to birthing new varieties and diversities of life. When the greens of the shores converged locally and spread even further to meet in the middle, networks and communications developed even further internally. The ever improving global surface contained thriving new life under a multitude of canopies. Different species learned how to live off the land as they were provided by new sources of nutrition. They continually flourished as time continued. Reproduction amongst the developing creatures ensured a continuation of the progressions of life.

The plants who insisted on having a connection to the water under the ground developed roots to reach them. Once tapped into a water source, the competition for light began as the plant's leaves raced towards the sun. Heavier nutrition led to larger scale plants and the thickening of the stem became that of a tree trunk. Height became the essential desire of these light reaching plants. The persistence of life shows in the forests which rose from the ground. In return of these new environments, even more species with new adaptations continued to occupy the space. The tiniest change of something like having to journey towards food through new agile challenges instead of the nutrition being readily available on the ground would lead to subtle, but milestone evolutionary changes. With all of the ongoing changes, organisms somehow managed to maintain the most prominent feature shared which is bilateral symmetry.

The result of sea creatures moving inland eventually became the presence of reptiles which would eventually become dinosaurs. As flowering plants blossomed, these new forms of creatures, with their advantageous size and keen abilities, quickly seized control of the land, water, and air. The age of the dinosaurs came to an abrupt end due to a number of possible factors. Whether it was a climate shift or a global catastrophe, certain portions became eradicated and started the domino effect of a dying species until there was a collective extinction. The survivors include, but are not limited to, crocodiles, lizards, tortoises and turtles. Surviving dinosaurs are said to have evolved into toothless birds. Birds took flight on account of their newly developed feathers. The small hairy-like warm blooded mammals reaped the benefits of a cataclysmic global transformation and repainted an already painted canvas which was washed away with the turpentine of time. With new areas to flourish in, the survivors mutated and accelerated into many exclusive exotic forms. The age of mammals then took effect, spreading vigorously to dominate the land, water, and the air.

The known scale of organisms range in an exceptionally wide array of remarkable configurations and this isn't even mentioning the scales of unknown organisms. The present number of millions of organisms on this planet, only account for about one percent of the total number of billions of species which have existed in the Earthly past. Humans are assisting the extinction of animal species, but the statistics are hard to estimate. Loose estimations will be provided to accumulate the sum of the animal kingdom as well as the human kingdom. The plant kingdom is not included as an illustration, but should be noted as an independent population ring of rings.

## Animal kingdom

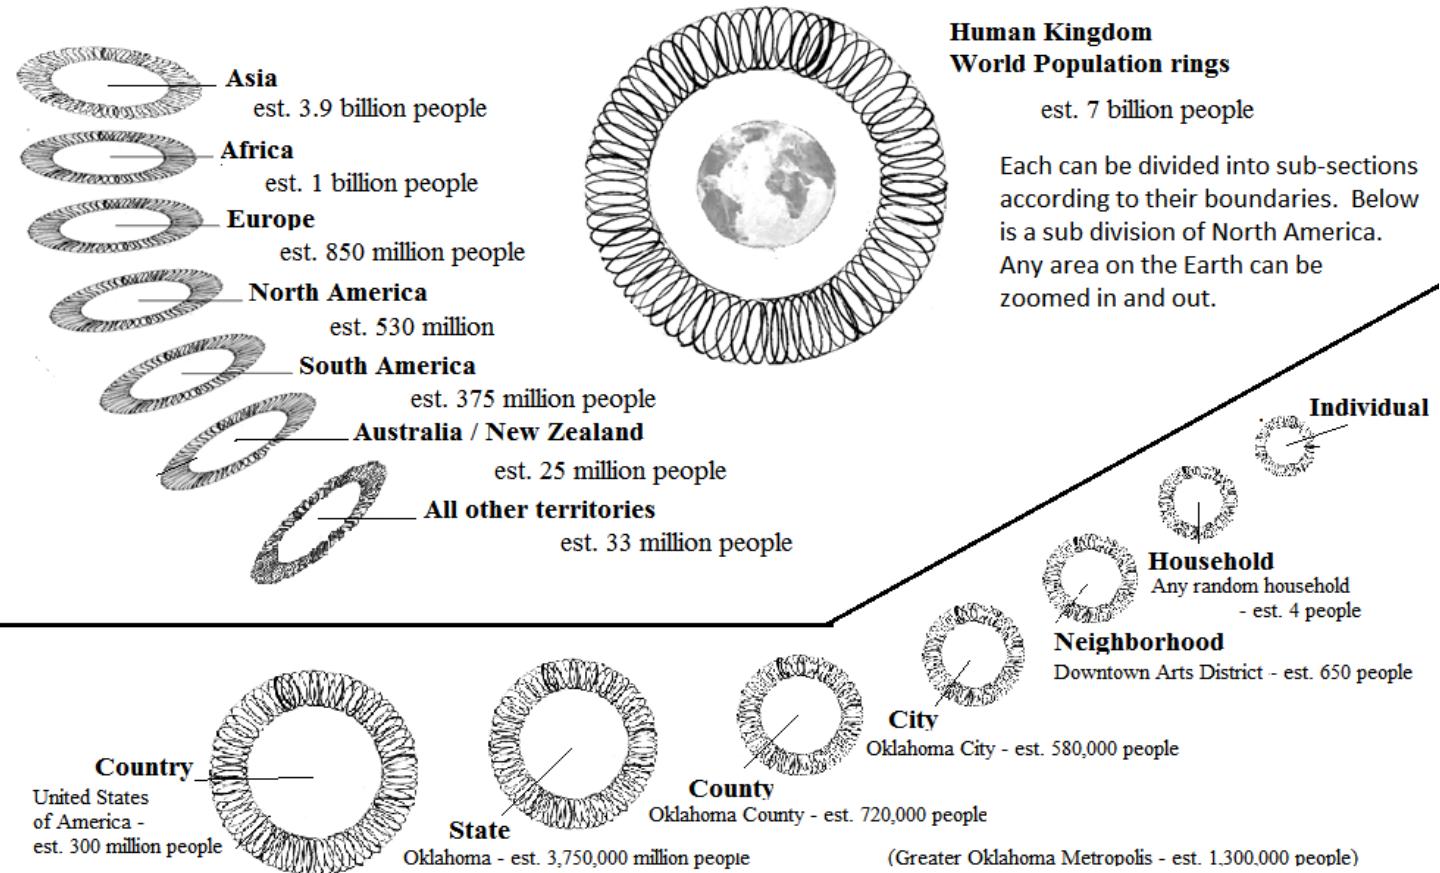

The entire list of animals along with the corresponding scientific names would be a huge effort which is not fully needed. The rings around the world, in the picture above, represent the current population of Earthly animals. If the rings were divided into classifications, the types of animals next to it could then be broken down into more circles of sub species. The timeline of Earth's history along-side with the networks of family trees in their biological evolutionary development would show a more detailed analysis. This illustration above is a loose estimate of the present animal kingdom population of this planet.

In a kingdom utopia, the unification of animals would be more than an interesting sight to see. The companionship of an owl and a mouse, of a tiger and a wild boar, of a snake and a chicken, of a spider and a fly, and of a shark and sea lion would probably seem rather odd. A land of no predator and no prey would go against the natural order of things, or would it? What is the natural order? Is the natural order the vicious cycles of life and death shown by the gruesome methods of nutrition on every level of the food chain, guided by a surviving instinct with no signs of remorse? If so, the human brain can apparently resist this natural order. Eating more selectively and having a healthier diet is a choice humans have the ability to make. Cognitive logical deduction, an acute sense of reason, excessive compassion, and courageous selflessness are all highlighted traits in the potential of a human being which are not generally portrayed on the same level by any other kind of animal. Whatever the definition of a natural order, the evolution of empathy is mainly what separates an instinctive driven mind from a will driven mind.

The origins of humankind can be looked upon with three major possibilities. Intelligent design is the by-product of creators and company, evolution is the by-product of natural selection and company, and intervention is the by-product of extra-terrestrials and company. Each with their invested fields of study and not generally included with each other, these intermingling possibilities cause much controversy. Crisscross patterns have otherwise been developed by many and occasionally by necessity in the event of our own understandings. Deep thought into the subject of origins usually merits multiple open ended discussions spanning several eras of generations in which the limit of understanding is assumed only to be restricted by the comprehensive reach of an individual. In order for total classification, the gaps in the stages of evolution, from nothing to something, would need to be filled in.

When speaking of the notion of environmental awareness, even a little bit can still be a lot. The current state of the Earth is widely unacknowledged by gigantic portions of the population. The world is falling apart in front of billions of wishful thinking minds. The rate of animal extinction is quickening in parallel with the uncontrollable surge of the human population. Unless some viable means of communication is spread about the true state of the ecosystem, the direction of the way things are going can be presumed to head towards catastrophic results. The reality of the condition is hard to fix and even harder to accept. These ongoing issues need to be addressed over and over and over until the basic Earthly perception is on the same page of proper responsibility and accountability.

If the Earth called a crisis hotline, the directory might look something like this: Press one for over population concerns, press two for the extinction of species concerns, press three for property destruction concerns, press four for waste management concerns, press five for air and water pollution concerns, press six for excess electrical transmission concerns, press seven for prodding and drilling concerns, press eight for ozone concerns, press nine for solar wind concerns, press zero for other options. The operator is the human population and the Earth would most definitely thank all of those who answer the call.

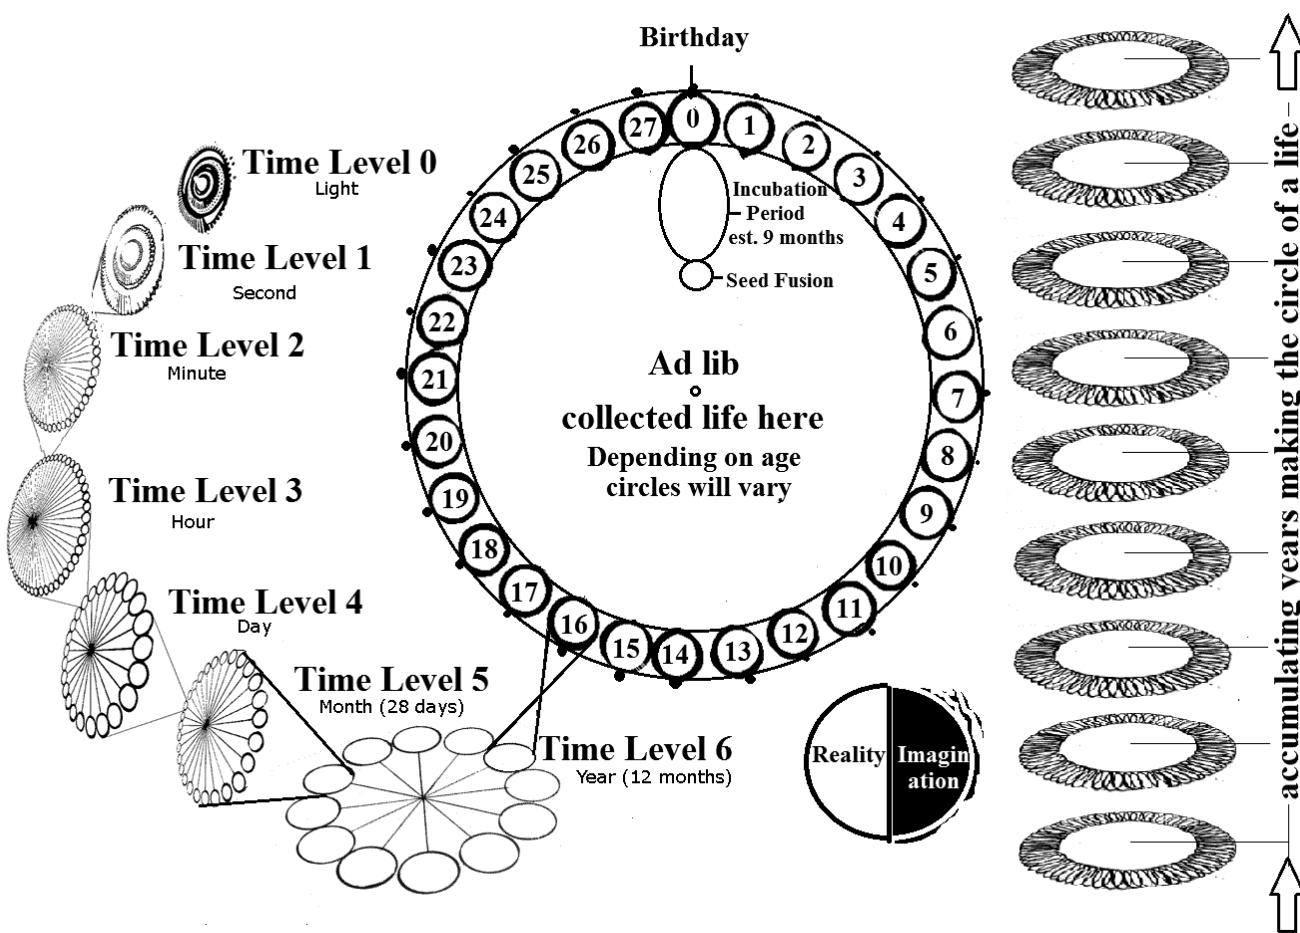

## Human kingdom

What can one person do in order to contribute to the progression of humanity? Well simple observations start simple conclusions. The answer is what one person does already. Human ingenuity has the ability and potential to gradually coincide with the evolution of the Earth in a prosperous manner. The style of living including consuming and disposing, should be the basic acknowledgments. Restructuring the means of human habitation is a mandatory necessity. Food, water, and shelter with some light and air are still the main components of living and having access to these essential ingredients of living will hopefully become a better standard for all social classes of the world because of the sole driving force of compassion for each other, but whether or not this will ever be achieved is anyone's guess. With whichever names, groups, and organizations that use the ideas of equality and fairness as a slogan, washing aside beliefs to integrate mutual goodness is essential for long lasting survival on this planet and of this planet.

Making steps of progression towards common living depend solely on our ability to communicate. The maturing steps of mental evolution are the seeds for social revolution. The brilliant work of Jacque Franco gives us a fine example of future conceptions in design and living. The ways of life envisioned can be true works of art. His term 'sociocyberneering' gives a fresh atmosphere which offers a realistic alternative view to manage the resources of Earth as well as becoming one with nature and adding ourselves to the natural flow of order instead of being a destructive breed of resistance against nature. Incorporating advanced technical intelligence by machines to ensure an unbiased fairness to the human population is the ideal automated world. With or without the machine automation, a collective aim of true equality should still make its way into sequence with all of the population on Earth.

Automated worlds can always be regarded with the dystopian possibility of a machine revolution. The technological advances in artificial intelligence will play the key roles for the abilities of conscious-like robotic structures. The marriages of nano-technology and bio-engineering may eventually lead to the construction of man-made entities, but incorporating an ability to dream alongside with granting willpower and choice is not something going to be easily achieved. Recreating the mysteries of the processes of life, which is still minimally understood, into another entity-structure is equivalent to becoming a distinctive creator. Although the vision is not yet conceived, the fusion of a human base with mechanical upgrades is already here. The definition of humanity will cease to be as is with the addition of an excess of unnatural elements. As frightening as linking a broadcast directly into neurological pathways is, developments are already made to do just that. Having a receiver / transmitter device which is tapped into the frequencies of consciousness directly leads to the dystopian possibility of remote controlled individuals and complete sensory vulnerability. Humans should retain the right of having a natural death as opposed to being mandated to conform to the spur of enhanced longevity during the course of the evolution of mechanical and digital hybrid human beings.

### Body vehicle

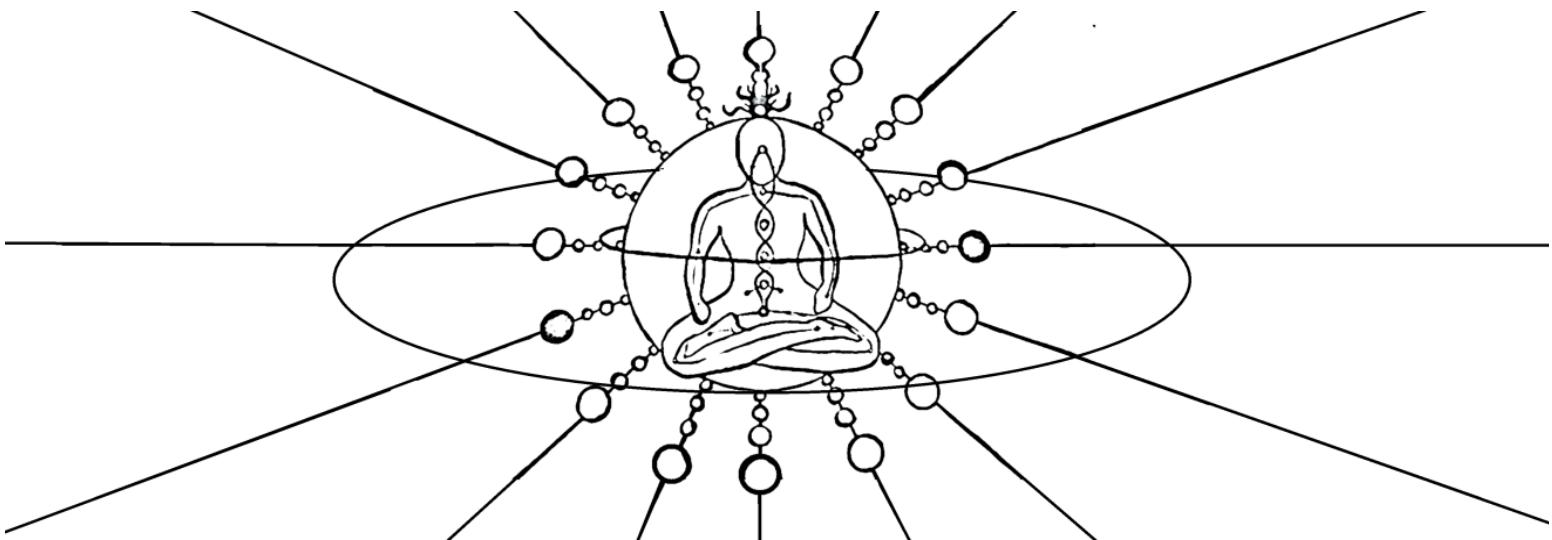

The genetic traits inherited begin to tell the geometric tale which can be identified with the individual. At the base, energy formed with DNA to create the trillions of particles of the physical body. Starting with the few multiplying cells and then followed by the further compiling of trillions of new circles, filling out the jig saw puzzles of our perpetual illuminate machines of conscious thinking is the basic experience we all share. The signature frequency of each life circle is a unique result of our continual overlapping thoughts and the accumulation of our experiences.

Being behind the wheel of the vehicle of observation is equivalent to the advanced version of a role playing video game. All the factions of a compartmentalized world could be programmed into binary codes with levels of skill sets between the playing parties, as well as different storylines full of questions with pre-made answers. Doing the honorable or doing the wicked in these instances would detail the intention of the person who is playing the game. Just how developed the game is, is incredibly hard to approximate, but farming experience points would be an every day occurrence in the given categories. Learning new abilities and attaining specific knowledge are the options we could set out to acquire if we wish to do so and leveling up would happen in select moments of clarity and realizations in our life.

Equipping ourselves with the weapons of creation and destruction, from a pencil to a solar bomb, would depend on our character's type of personality, decided by our own willpower and grown from the previous lessons learned and attained. We would be outfitted with apparel of many logos and trademarks according to the task being experienced. Our personal accessories are the artifacts we choose to carry, whether they are the relics of portable electronics or other kinds of equipment. Strength, knowledge, agility, dexterity, endurance, charisma, willpower, and perception are comparable to any other player in the massive multiplayer game. The purpose of the game is generally unrestricted with missions, but the most common goal is simply survival. The life style of the character would be produced by the mind style of the user.

An example of leveling up in the terms of a human mind and life can likewise be viewed in reference to the Pearson-Marr twelve archetypes. Each one of these classes can be focused and merged according to the player of the game. The range spans from an innocent child mind, a survival orphan mind, an aggressive warrior mind, an outlaw rebel mind, a controlling ruler mind, a passionate lover mind, a helping hand mind, a wandering explorer mind, an analytic teacher mind, a clowning jester mind, an inventing creator mind, and finally a harmonized magician mind. Another similar reference would be to Carol Pearson's book 'The Hero Within' which extensively describes the six archetypes as being the child, the orphan, the warrior, the wanderer, the martyr, and the magician.

When speaking of judgment, the complete collection of circles which define a distinct person would be very difficult to put into concrete terms when taking into account all of the complicated factors. This notion of exception is not to give reason, but to give understanding to the possible instances unknown in the pre-math of certain actions. We all make mistakes and learn along the way. Scaling the intention of an altruistic 'good' mind and a murderous 'bad' mind would include many numbers from highest to lowest, but the true colors of an organism can be otherwise compared to the colors radiating as an aura from the primordial energy generators which operate our crystallized human body.

## Energy casters

The unseen bioluminescence of our physical body has been coined into many names with familiar meanings. Free from luciferin chemicals, the dubbed doubled forms of our radiant essence are most often visualized as a spirit form, a soul form, an imagination form, an aura form, a life force form, an anti-form, among many other named forms. Depicted as a shelled embodiment lingering below, through, and above our bodies, these unknown energies are said to have the ability to link together with each other as well as the surrounding energy frequencies. Although typically not scientifically accepted, the concept of a spirit form has been accepted by many around the globe for thousands of years.

The spinning wheels of energy in our central alignment are referred to as the chakras. These energy centers are believed to be seven spinning centers in parallel with the spine from the root of our base, to the navel, to the solar plexus, to the heart, to the throat, to the third eye, and to the cosmic bridge of Oneness at the crown of our head. These general energy vortices are also said to be connected to the sub chakras throughout our meridian point body which balance the entirety of our structure. This network of energy is said to continually spark the molecular sub structure resonating throughout every cell in our body. The colors suggested here are for simple reference only and the qualities associated with them should not be restricted to absolute classifications in the event of all possibility.

| Chakra                    | General property         | Base color   | Brilliant color       | Dull color           |
|---------------------------|--------------------------|--------------|-----------------------|----------------------|
| 7th - Crown Chakra        | Gateway to the eternal   | White Violet | Artfully expending    | Blank automation     |
| 6th - Third Eye Chakra    | Goggles of imagination   | Indigo       | Artist of forgiving   | Cynical condemnation |
| 5th - Throat Chakra       | Art of interaction       | Blue         | Honest harmony        | Blatant dishonesty   |
| 4th - Heart Chakra        | Primary center for love  | Green        | Healing virtues       | Unfaithful nature    |
| 3rd - Solar Plexus Chakra | Primary center for self  | Yellow       | Dexterous ability     | Vehement jealousy    |
| 2nd - Navel Chakra        | Ignition charge for life | Orange       | Confident contentment | Uncertain security   |
| 1st - Root Chakra         | Instinctive center       | Red          | Creative excitation   | Violent tendencies   |

Chakras are said to dictate the flow of our emotions and feelings. Intention, not language, would be the origin of fluctuating change because the intentions of our mindsets have the most compelling effect when generating energy. The mental frequencies manifested by the individual would imprint themselves into every portion of the whole. Based on the balance and harmony of these centers, the overall health of a body would be mirrored by our integrations of thought. The Kundalini experience is the peak utilization of these energy centers. When associated with color, the vibrant and rich auras would contrast the dull and poor auras by the means of the individual efficiency of the chakra centers. One should always remember how colors can sometimes be misleading under certain conditions. Each energy center has many more properties and qualities than what is listed here.

The possibility of altering color by willpower would adjust the definitions of color in slight. Possibility leads to the exception of how certain kinds of consciousness may be able to control the colors one radiates even to the point of masking, camouflaging, and substituting them under different emotions or feelings. In the empty state, before light and dark is projected upon the ionized plasma field, color is undefined. A property of the DNA eye structure code creates photoreceptor cells which translate electromagnetic waves into our brain. This process of photo transduction reads photons and projects them into a visual backdrop for us to interpret. These coded rules program the brain to correlate the distinctions of color as we filter the shared holographic screen of reality. This leads to the presumption of how the colors we see are not the whole and only truth.

The wide spectrum of human consciousness would compile together to form a light show of flashing colorful rings, full of diverse aura colors and shifting through many kinds of unique thought patterns. The Earth population ring would stack, in a circle, close to seven billion, and each ring would show a map for each individual blueprint. Each one of us is a collection of spinning disks of conjoined colors, traveling by the will of our motions. Whether there are anti-versions of chakras for an anti-body, structurally bound by anti-DNA, and just how it interacts with the counter composite is definitely open for discussion as well as any other colors which might be able to be portrayed including any forms of alien colors which exist outside the spectrum of white light.

### Graphic of a hollow

As a decoder of consciousness, you have the ability to go to the options menu and switch the dualistic mode to a non-dualistic mode and become the mediator. Tearing down the fence of duality shows a growth of maturity and open mindedness. Some of the most mature and most open minded people will still not try to understand what they choose not to. Arguments carry on due to the conflict of opinions in a field of confusion filled with opposing alternate definitions, but there are exceptions either way you decide to look at any side if you choose to observe what there is to observe. In order to change the default settings to non-dual mode, the ideal automated thought process must begin with the standard understanding of the equality of all things.

The harm we do to each other indirectly harms ourselves and the harm we do to ourselves indirectly harms others. A double edged sword it is, but treating each other and ourselves better is the simplified method for appreciating the infinity. To think any embodied physical structure is better than another is premature and would first require the acknowledgement of an overall time frame which is basically incomprehensible. Prejudging specifics before that time passes leads to an inconclusive guess which will only be resolved when the true intentions of an individual are shown. The unification of all eternal structures appears to have already been achieved beyond the measurements of time including all within an infinitely repeating umbrella of unknown collections. Distinctions matter not as groupings matter not in a world of freedom of thought where there is no such thing as space, there is no such thing as time, and there is no such thing as absolutism.

The fabric of the blanket of life is manifested through the electromagnetic operating system. The physical content of a life construct is a waveform of resonating particles. Any organism and all organisms are meta-crystallized structures perpetually charged with reoccurring electrostatic vibrating energy. Alongside the physical attributes, our bodies radiate an emitting aura, coloring an embodiment within and outside the magnetic force field of a human being. The parameters of a projected frequency of an encapsulated life form are unknown. The cognitive facility intertwined within a holographic field, fed by a universal grid-like matrix of electrical components, is evolving on a scale where x, y, and z are all variables for different possibility. The suggested places of imagination can only hint to the direction of a life beyond physical means and will probably be sooner verified when the constraints of a collective reality dissolve completely. New age, old age, now age, and no age, what is the difference? During times of selection, remember how the law which attracts misses out on what it repels.

Winged creatures appear as a common theme in just about every ancient corner of the world. In addition, the case of the dragon shows global phenomena of a creature undocumented according to the fossil record, yet regarded as if completely literal and real in the many serpentine forms. On the other hand, extremely large Neanderthal remains have been found in expeditions of unusual tombs in very unlikely places. If certain elements can be given leeway for the sake of thought exploration, creatures of imagination should be at least considered in proper respects for the sake of argumentation. Dragons, giants, angels, unicorns, leprechauns, gargoyles, fairies, gnomes, trolls, elves, and whichever else folklore creature would contrast the level of their intention over the backdrop of its instinctive nature. Who is to say what is good or bad? The stereotyping of a creature would destroy any legitimate diversity the species may actually possess given there is an alternate history unknown to humans. Judging something based on appearance and having an opinion derived from the lessons learned as a human being might prove to be a misguided step when taking into account all possibilities.

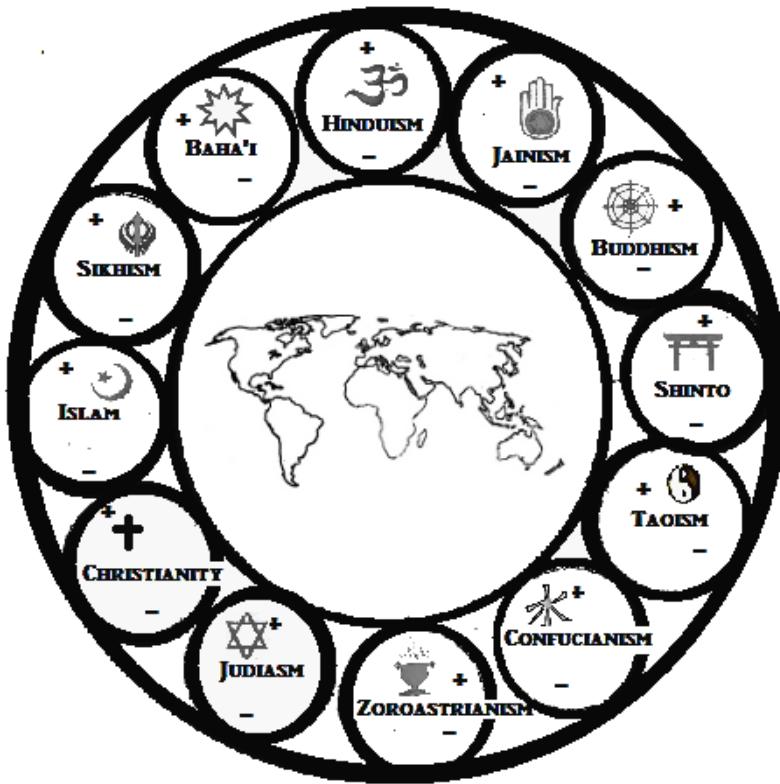

#### A precursor to the afterlife insurance descriptions:

The religions and structured beliefs offer their services for a certain premium you have to pay. The premium for each belief is different for each kind of policy. Whether you have to devote your soul, give ten percent of your income, or ritualistically worship however many times a day and week, the emphasis given shows the ambition of the faithful individual. Depending on how well you follow the rules which are given to you, will decide on the pay out of your insurance when you need it. A reward system of your life, depending on whether or not you are 'good' enough, 'good' depending on how it is defined within the specific insurance terminology and fine print. These afterlife environments, suggestively constructed by a shared collection of experience stemmed from similar frequencies and intertwining thought patterns, are mostly focused into belief with the following twelve major religions. The populations of each would be managed within each ring with exceptions of course. Each afterlife kingdom, with their subdivisions and denominations, offers spiritual promises to the human population of circles but the world offers plenty more variety in methods of belief. Among the many unsaid organizations, agnostics and atheists have their own circles of intention as well. Some terms like 'I don't know what to call it-ism', 'I don't know-ism', and 'I don't care-ism' are also inadvertently created circles. The housed population of any afterlife kingdom would consist of the conjoined patterns of thought shared between the willing participants of the group.

### *The Ascent*

*Fear encapsulates most of the factors in losing one's life, but giving one's life whole heartily redefines death altogether. The departure from the vessel of life into the ascension of an unworldly form reinforces hope in the mind of a martyr. The sacrifice is only a concept to transcend and what form one becomes after is completely welcomed by trusting in the true quintessence of ongoing new creation.*

### Eternal Faith

A faithful belief in a select nothing  
 Further unconscious can be intrigued  
 Among plasma seas of empty space  
 In a crowded place of infinite leagues

Impossibility can be preached with ease  
 Shifting the awareness of the mind  
 When there is true freedom to create  
 Begins the restructure of the divine

Mentioning this late, merely as a failsafe  
 Basic instructions on how to eject the soul  
 If tyrants use energy for an evil purpose  
 Something ostensibly out of a spirit's control

Believing in this select nothing for plane reasons  
 That guileful fascist set ideal make feelings ill  
 When the deceived mindsets of the good natured  
 Are energy sown in thoughts of a fateful will

## Hinduism - 900 million members

It is unknown just how this religion was founded, roughly in between 2500-1500 B.C.E., in the Indus Valley, India. It is said to not have an origin, but rather handed down to humankind from an otherworldly source. In theory, invading Aryan people and / or seven sages (Saptarishis) brought with them the spoken verses and hymns which were later to be written down, becoming the four Vedas. The Rig Veda, Sama Veda, Yajur Veda, and Atharva Veda are then continued by the Upanishads, Puranas, Vendantas, Mahabharata (containing the Bhagavad Gita), and the Ramayana among many others. Over the span of the holy texts comprises a supernatural multi-dimensional polytheistic epic. A trinity of three gods are the most prominent, Brahma (Creator), Vishnu (Mediator), and Shiva (Destroyer), followed by a countless number of gods, all within Brahman, the ultimate reality.

These three prime gods, however, are predated by elder gods whom get called by many names. As it is with all mythologies, complexities arise of a confusing nature when trying to understand just who is who. Male deities have female forms and female deities have male forms, these mirrored energies are called 'shaktis'. Brahma's shakti is Sarasvati (goddess of arts), Vishnu's shakti is Lakshmi (goddess of wealth and good fortune), and Shiva's shakti's include both Parvati (goddess of power) and Durga (goddess of victory). The gods who clone themselves into multiple incantations further complicate the picture in an arena which is already lost in translation. A gross estimate can be seen on the next page.

Different factions of Hinduism believe in multiple angles of an all-encompassing whole. In retrospect to their gods, there is a school of Brahmanism (Brahma), school of Vaikhanasas (Vishnu), school of Shaivism (Shiva), and a school of Krishnaism (Krishna) among others. Regardless of the school, basic elements construct a devotee. 'Dharma' is the obligations in one's life according to their surroundings and the life given. Fulfilling the duties instructed is the premise to a path of an unending journey. Kama (pleasure) and artha (prosperity) are said to be non-restricted as long as the life-path chosen is not led astray by them.

Being born into the caste system directs your involvement with what level of prestige you have, ranging from the peasants (those not worthy to read the Vedas) to the commoners and warriors (those worthy to read the Vedas) to the Brahmins (those with access to read the rarest of secret scriptures). Karma is the universal element within the samsara (wheel of life). The presumed path of the atman (eternal soul) is to rejoin with the moksha (ultimate god-head). Through complete devotion, according to the holy text of choice, purity of the self would ensue.

The branches would contain different rituals, sacrifices, readings, teachings, yoga, and meditations. Community volunteering would be an active role in any of the chosen paths. The choices one makes accounts for the whole in a system of universal balance. The cycles of rebirth in life and death are believed to continue until fate tells one otherwise. In this way, a reward system grants a devotee a promise to direct their souls on a correct path. Once judgment is passed upon them, the appropriate measures will take place for the soul's transmigration. In this multi-dimensional world of a countless number of planes, the possibilities of a new form are not limited. The purpose, however, is to realize an individual is not a single being attached to the immediate surroundings, but instead understand that one single being is the all being, void of calamity, experiencing a facet of the whole.

From the influence of Hinduism, many alternate forms of worship have formed themselves into their own religions. The major dividing point is the amount of Vedic compliance one takes seriously. The locations of these dividing points can be found in conjunction with the vast number of temples erected in the landscape. The adoptions of specific ways of life are evident as traditions are seeded into the ongoing generations. The separation from Hinduism is most evident with the differences of its cousin religions.

Symbol: Om

### Thirty-three

Aditi is said to be the supreme virgin mother of all the gods. As commonly believed, within her all things were made including her shakti counterpart Prajapati, the supreme father of all the gods. Within them creates the Hindu pantheon. The Rig Veda claims thirty-three gods at the top of the celestial list. Somewhat lost in research, one can only begin to mention a few.

The twelve solar deities of the Adityas include Varuna (a god of fate), Mitra (a god of communication), Aryaman (a god of friends), Tvastrī (a god of craft), Pusan (a god of union), Dakṣa (a god of ritual), Bhaga (a god of wealth), Visvavat (a god of justice), Savitri (a god of motion), Amsa (a god of sacrifice), Yama (a god of death), and Dhatri (a god of health).

There are eleven storm deities under Rudra (later to be known as Shiva). These eleven rudras also have their shakti counterparts in the forms of Manu (♀Dhi), Manu (♀Vṛtti), Mahmasa (♀Usana), Mahan (♀Urna), Siva (♀Niyuta), Rtudhvaja (♀Sarpis), Ugrates (♀Illa), Bhava (♀Ambika), Kama (♀Iravatl), Vamadeva (♀Sudha), and Dhrtavrata (♀Dikṣa). The mixture of these benevolent and malevolent gods of many names and many numbers are brought into existence for many purposes, but mainly for the companionship of Shiva's will and for the annihilation of Shiva's opposition.

There are eight elemental deities called Vasus. These eight deities are Prithivi (a goddess of Mother Earth), Agni (a god of fire), Antarikṣa (a god of water), Vayu (a god of wind), Surya (a god of the sun), Dyaus (a god of the sky), Naksatra (a god of stars), and Soma (a god of the moon). These gods create the eight directions as well as being the eight prime sources of material energy.

The sum of these numbers above amounts to thirty-one gods. The notable Indra (a god of storms) would make thirty-two and then the Ashvin twins (horsemen of the sun, counted as one) would make the thirty-three of Aditi (♂Prajapati). According to many, the variations of this list of names fluctuate often. There are many more gods and a great deal of intertwining godly confictions. Among some gods not included are Ganesh (the elephant headed god of luck) and Hanuman (the monkey god).

When humanity is in dire need of assistance, spontaneous incarnations of Brahman are said to manifest in the form of different kinds of avatars. Usually and often, the first recognized are the ten avatars of Vishnu. The ten capsules of energy are listed here in order of their appearance:

-Matsya (the fish) emerges with the flood to ensure the protection of Manu (survivor of flood) and the Veda.

-Kurma (the tortoise) uses his huge shell for leverage for the gods to stir immortal nectar in the sea.

-Varaha (the boar) swims down in the depths of the ocean floor to pull up the drowning Earth goddess from her underwater residence.

-Narasinha (the lion) assassinates the demon lord, Hiranyaksa, who is immune to either human or beast. The lion-man pounced on the demon lord and restored balance by ending him.

-Vamana – Trivikrama (the dwarf – colossus) asks the demon Bali (great grandson of Hiranyaksa) if he can occupy a small place in front of his cave to meditate. The demon judged his dwarven appearance and mockingly insulted him. Vamana then turned into Trivikrama (the colossus) who took three giant steps in order to occupy the heavens, the earth, and then another step to create a new place for Bali to occupy in the underworld. This act restored balance in favor of Indra for the Earth while demoting the demon lord Bali.

-Parasurama (if human born, then under Jamadagni and Reunka) is a hero warrior with a blood lust for demons. Vishnu bestows upon him a magical axe to harness in his valiant demon campaign. King Kaartaveerya-arjuna had his army kidnap Jamadagni's divine cow over a dispute. In retaliation, Parasurama serial slays the army as well as the king. In revenge, the king's sons decapitate Jamadagni when he is meditating alone.

-Rama (if human born, then under the King Dasaratha and Queen Kausalya) marries Sita (an incarnation of a mother goddess, adopted by King Janaka and Queen Sunayana) and become a prince and a princess of their land of Ayodhya. During time away from the palace in the forest of Dandaka, Sita was taken hostage by Ravana, the King of Lanka. Fueled by the love for his wife, Rama starts his quest against the kingdom of Lanka. With the help of some friends and a monkey species, Rama conquers Ravana and reclaims what is dear to him. Rama and his companions return to Ayodhya and he later becomes king.

-Krishna (if human born, then under Vasudeva and Devaki) stands as a pinnacle incarnation of Vishnu. As the godly battles in the heavens continued, demi-gods infiltrated the Earth as royal prestige. As the kings and queens of the Earth were controlled by these shadow manipulators, Krishna was sent to restore humanity against the tyrants and their related legions of evil. The mere essence of Krishna thwarted the demi-gods plans to control the world. In time, the salvation of the soul for sins against the holy text would be decided by the personal relationship with Krishna.

-Buddha (if human born, then under King Suddhodana and Queen Maha Maya) is ascribed to being a false teacher by the Hindu gods. Vishnu apparently acts as a guide to steer non-believers away from the Veda scripture on purpose for the purpose of leaving them god-less, without protection, and completely vulnerable to the wrath of the Hindu gods.

-Kalkin is said to be the tenth and final great avatar of Vishnu. His arrival on a white horse to destroy the wicked and redirect humankind under his will is still pending.

Note: Other incarnations of Brahman include many, like the avatars of Aditi, Shiva, Ganesha, and even more of Vishnu.

## Jainism – 6 million members

Vardhamana Mahavira encapsulated this religion around 550 B.C.E. in India. Born of a prestigious class, he rejected the material life at 28 years young. After 13 years of concentrated observation he is said to have attained complete enlightenment and became the 24<sup>th</sup> praised ultimate enlightened being (Jina / Tirthankara). Jainism is said to have no beginning and is shrouded by the mystery of its mythologies. The 23 recognized enlightened ones before him are said to be of quintillions of years young through the ages of the infinity so the stories get quite ornate.

The holy texts of Jainism can be summed up as the Jain Canon, consisting of a written collection of ancient spoken teachings. These works included the Kalpa Sutra (biographies of Jinas), the Agamas (teachings spanning from 12 Angas, 12 Upanga-sutras, 6 Cheda-sutras, 4 Mula-sutras, 10 Prakimaka-sutras, 2 Culika-sutras), and Tattvartha Sutra (a basic guidebook for eternity) among many others. Written by their light-soul heroes of wisdom, they go to show how elegant ways to compromise instances of conflict can be solved through logical deduction with transcendental karmic values. While discounting the notion of a single distinct creator god, claiming instead the ability to become god is potentially within everything making every 'thing' divine.

Karma is said to be the all permeating force of everything in the All, and every 'thing' is a soul itself. The souls within every single thing throughout all of existence are called 'jivas'. Reincarnation of energy is directed by the laws of karma until ultimate freedom and liberation (moksha) is achieved. Through the ages of unknown things, many beings are said to have achieved the ultimate goal of souls by becoming part of the divine realm of infinite infinities and in doing so has learned how to perpetually have zero desires. Since desire causes suffering, thoughts with karmic retribution would interfere with the balance of the enlightened state. The liberation of becoming an eternally infinite 'god-like' being is not mandated by the doctrines of their holy text because being god-like cannot be properly conveyed.

Practicing the suggested karmic values as a way of life is essential to a Jain for the steps of one's progression. For the atonement of past-life karmic fouls, strict discipline is encouraged as a way of life. 'Ahimsa' is the basic respect for all life and the effort of avoiding any harm to any living organism. The common practice for Jains is going the extra distance to protect the life of all living organisms, from covering one's mouth with a guard for the purpose of not accidentally breathing in any to sweeping one's path for the purpose of not accidentally stepping on any. Eating is also taken into consideration as far as harming plants by eating and digesting them. Fruits falling from trees on their own accord are the ideal type of food to use as nutrition. The nudist 'sky-clad' branch of Jainism (Digambara) differ with the clothed 'white-clad' branch (Shvetambara) over the importance of non-attachment to material things in terms of clothes and the killing of organisms involved in the washing of clothes. Intoxication is also prohibited exclusively as is altering one's mind with foreign substances. Through the logical thought of karma, following the embedded path of extreme obedience is said to be the correct path of one's journey to eternal life.

'Samsara' is the material life within the wheels of existence in which karma holds consciousness in restraint from the soul's own ultimate bliss. By following the three codes called the Three Jewels, salvation can begin towards the event of moksha (ultimate god-head). Abiding by the proper text (Right Wisdom) with consistency (Right Faith) and correct behavior (Right Conduct) is essential for emancipating all of the material desires for the purpose of karmic absolving. Monks and nuns take an oath of Five Great Vows. These five vows are extreme non-violence, extreme truthfulness, extreme non-thievery, extreme celibacy, and extreme non-possessiveness.

In the effort to distinguish the levels of being, a five point scale was adopted. Monks accept the first level of initiation. Teachers amongst monks (upadhyayas) gain access to the second level. Spiritual teachers of teachers (acharyas) make up the body of the third level. Saintly amongst spiritual teachers (siddhas) achieve the fourth level through moksha. Arhats (tirthankaras) hold the highest level. The supreme beings on the fifth level are regarded as the truest state of energy of this age. Jains do not limit consciousness to human form, but the most advanced deities of non-human nature are second to the Arhats in terms of liberated freedom. Those, that is, which are not observed to have reached the highest level themselves.

'Loka' is the term for the entirety of the layers of circular existence, layered specifically with a spectrum of planes from the layers of hell to the material world to Mount Meru, the mountain of heaven. While the jiva is restricted to individual comprehension, rebirth after death is said to be directed by one's own individual construct based on one's karmic balance. The integral network of multiple perspective truths is called 'Anekantavada' in which there is no single reality, but instead a combination of all the realities.

Temples of intricate design and hand crafted home shrines are the typical places of worship. Ritualistic tendencies are offered in plentiful variety. One-thirteenth of each day, roughly 48 minutes, is dedicated to 'Samayika' (optimistic meditation). 'Darshan' is another ritual where the individual engages in a comfortable staring contest with the image of a Tirthankara while chanting mantras. Among the rituals, 'Sallekhana' is the most extreme. In the effort to leave this plane of existence without any attachments, holy suicide by starvation is implemented as the course of action when one decides to voluntarily give up one's life.

Symbol: Jain hand

## Buddhism – 400 million members

Prince Siddhartha Gautama enshrined his philosophy of Nirvana, which then became a religion, around 460 B.C.E. while meditating under a bodhi tree in current day Nepal. The closest collection of what could be called holy texts for Buddhism is the Pali Canon (Tipitaka). These texts include the Vinaya (disciplines of Buddha), Sutta (teachings of Buddha), and Abhidhamma (constructive analysis of Buddhist thought). In Buddhist thought, a divine supreme god is unnecessary for the realization of Nirvana. The journey of stress-less self-divinity does not require the submission of self to an otherworldly presence, but rather the submission of self to one's self in the form of selflessness. Buddhists believe this inward evaluation, this peaceful, desire-less, and thought-less meditative state, is more important than the worship of non-human entities (devas and asuras) or any supreme deity. Since desire is universal, non-human beings are also subject to the same confinements of the desire filled nature of a conscious being.

Said to be divinely born from his virgin mother, Queen Maya, young Siddhartha was honored by Hindu gods at birth for his reincarnated prowess. In a new form, from his hundreds prior, he lived prestigiously while being revered as divine. Marriage soon followed him at the age of sixteen with his cousin, Princess Yasodhara. After the birth of their son, Rahula, Siddhartha renounced his high class status to follow a more ascetic life by the means of being a beggar. Abandoning all of his worldly ties, newly named Gautama set out to find a new spiritual way. Over the course of his observations, balance of the extremes became his new spiritual means. As he masterminded his consciousness in thought ranging meditation, he perpetuated his aura to shield himself during the trials and temptations of the demon Mara. Awakening into a new state of consciousness, Guatama became Shakyamuni, the classical enlightened Buddha. The transformation of his consciousness took another leap with Parinirvana, the crowning Nirvana at his ascension of death. The mythology of Buddha can be viewed with the general teachings of his twelve phases of life. The teachings accredited to him provide for the legacy of Buddhist thought.

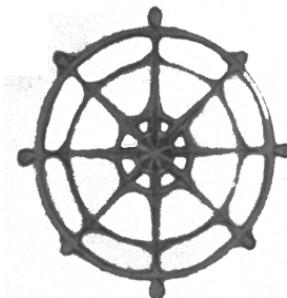

The basic premise begins with the self-fusion with 'dharma', the natural order and chaos. Cause and effect is said to build karmic credit within an existence without a start or an end. While acknowledging deities of the multi-dimensional, ranging from natively common to exotically alien, Buddhism coexists well in parallel with scientific evaluation of experimented fact. Buddhist thought recognizes the proofs and evidence as upholding the laws of dharma. Knowing joy is beyond material wealth sets the stage for a humble life of living in poverty simply as a beggar. The standard doctrinal model is the Five Precepts which are abstaining from the following: taking a life, taking what is not yours, sexual misconduct, dishonesty, and consumption of intoxicants. Being aware of the 'Three Poisons' of consciousness (hatred, lust, and ignorance) in their true form acts as the initial start to the diminishing the potency of them to nil.

The Four Noble Truths accepted by Buddhists start with the template which states suffering (dukkha) is universal. The second truth coincides with the first by saying desire is the cause for suffering. The third truth coincides with the previous two by eliminating the factor of suffering by eliminating the urgency of desire. The fourth truth coincides with the previous three by saying the correct path to Nirvana is attained by following the 'Middle Way'. The Middle Way is an 'Eight-fold Path' philosophy which embodies the suggested way of deconstructing the mind into the void of pure emptiness. The eight concepts of the Eight-fold Path, which are said to light the path to ultimate awareness, are proper wisdom, proper intention, proper speech, proper action, proper behavior, proper consistency, proper ideation, and proper focus. Each of which have their own compartments of suggested doctrine.

Consciousness is said to be divided into three parts called the 'Three Marks of Existence'. 'Anneca' is the notion of unending transformation for all things since the natural order of the construct of dharma is in a constant state of chaos. 'Dukkha' is the notion of the inevitable suffering of any consciousness aware of itself. The third notion is the zero self, called the 'anatman', which one can consider to be the prime silent and inactive consciousness before any projected thoughts are refracted. Often meditated as 'satori', the 'no thinking' and 'un-thinking' plane is the natural void of the mind and is a stateless state which predates any birth of any five sense vehicle and in this case, the goal of Nirvana is to return to this plane of complete independence and unassisted contentment. We are said to be born from this crystal clear nature of existence and then into the illusions of reality. The ideal end conclusion is to shed the skin of materialism and to completely reconstruct the definition and meaning of desire into a concept of pure nothingness.

Within the wheel of life, six realms of existence are said to exist. Starting with the hell kingdom realm, and then followed by the ghost kingdom realm, animal kingdom realm, human kingdom realm, demi-godly kingdom realm, and finally the godly divine kingdom realm. The karmic credit score of one's life directs the location of its own rebirth. Compassion is understood as a reward within itself as an aspect of the universal infinite love around us. An assortment of Buddhism varieties have spawned due to the vast anti-nature of the teachings. Multitudes of schools have spanned throughout various mountains with generations of uniquely refined principles. Among the most popular are integral circles in themselves, ranging in style, like Zen, Tibetan, Tantric, Vajrayana, Mahayana, and Theravada. Styles of different practices include yoga, meditation, mantras, extra teachings, image appreciation, and custom ways of life.

Symbol: Wheel of life

## Shinto – 3 million members

Ancient Japan coined the ‘Way of the Gods’ philosophy into Koshinto around 600 B.C.E. There is no holy text in which it relies on. Simplistic in form, complex in nature, this polytheistic realm of spirits is under the guidance of a single source. Kami is the source which created itself into many. Kami is nature, nature is spirits, spirits are energy manifested, energy manifested constructs are microcosms of Kami. The microcosms of Kami, the child-spirits (*bunrei*) of the pure ever existing circle of the core Kami (*naohinomitama*), are the ever occurring self-manifestations of the Kami source.

One spirit (*ichirei*) and four souls (*shikon*) is the working mechanism for the construct of Kami. Within each spirit reside four specific souls which operate together in a diverse amount of fashions to keep the world of the spirit (*reikai* / lower level / earth) and the world of Kami (*shinkai* / higher level / heavens) perpetually intact. These souls are defined through a range of means, but roughly the instinctive soul (*aramatamata*) works in the means of bringing forth the physical production of action and the exterior physical reproduction of organisms. This soul is complemented by the content, peaceful, and integrated soul (*negimitama*) which works in the means of bringing forth the interior motions of energy gears. These two material souls are joined with an additional complementary pair of souls which are the immaterial souls. The joyous soul (*sachimitama*) works in the means of bringing forth love, communication, and harmonizing compromise of the universe. The magical soul (*kushimitama*) works in the means of bringing forth the manifestation of inventions and these bringers of creation are said to be directly sourced from the core Kami (*naohinomitama*).

In the translation of the Kojiki, the Japanese chronicles of ancient events, B.H. Chamberlain notes the pantheon of prime gods as shown in order of appearance. The heavenly Amatsu-kami clan is the Five August gods / emperors sometimes associated with the five directions and elements. The triad originators are the ‘Master of the August Center of Heaven’, the ‘High August Producing Wondrous’ deity, the ‘Divine Producing Wondrous August Ancestor’ deity, who then are followed by the ‘Pleasant-Reed-Shoot-Prince-Elder’ deity and the ‘Heavenly Eternal-Standing’ deity (each of which were said to have been created when the Earth was forming). These five primaries created the ‘Seven Divine Generations’ which include the earthly Kunitsu-kami clan, comprised of the ‘Earthly Eternally Standing’ deity, ‘Luxuriant-Integrating-Master’ deity, the siblings of ‘Mud-Earth-Lord’ and ‘Mud-Earth-Lady’, the siblings of the ‘Germ Integrating’ deity and the ‘Life Integrating’ deity, the siblings of ‘Elder-of-the-Great-Place’ deity and ‘Elder Lady of the Great Place’, the siblings of ‘Perfect-Exterior’ deity and ‘Oh-Awful-Lady’ deity, and the siblings of Izanagi (known as a god of creation and life) and sister and wife, Izanami (known as a goddess of creation and death). Following them is the most often revered Amaterasu O Mi Kami (goddess of the sun / ‘Great Spirit Who Shines in the Heavens’). Other facets of Kami include Susanoo (god of the ocean), Tsukuyomi (god of the moon), Ame no Uzume (exotic dancer goddess), Sarutahiko Okami (guardian of Earth), Hachiman (god of farming), Raijin (god of thunder), Fujin (god of the wind), Inari (goddess of fertility), Omoikana (consultant of the gods), Amatsu Mikaboshi (August Star of Heaven, god of evil), Ryujin (dragon god of the sea), and his daughter Toyotama-hime (Otohime).

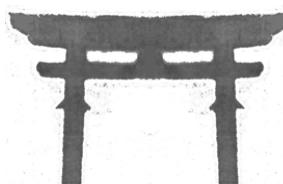

Toyotama-hime was the ‘Dragon Princess of the Sea’ who married a wandering hunter named Hikohohodemi no Mikoto. During the pregnancy of their child, he longed to live back above land. She agreed to this as long as he did not witness her giving birth to their child. Unsuccessful with his agreement due to any number of factors, he caught her in her natural non-human dragon form, giving birth to their dragon child, Hikonagisa Takeugaya Fukiaeza no Mikoto. The child later married his aunt Tamayori and gave birth to their son who later became known as Jimmu-Tenno, the first emperor of Japan. Following after the ancestral godly family on the Kami hierarchy, are the uncountable random spirit Kami, which are referred to as the Yaoyorozu no-kami clan.

The common mutual goal of like souls portrays goodness, purity, honesty, and compassion. Setting the ‘born from nothing’ mythology aside, Shinto is a very customizable belief structure and adapts extremely well with other corresponding beliefs. ‘Harai’ is the simple premise in the livelihood of cleanliness. Bathing ritualistically (*misogi*) under a sacred waterfall or in a holy location, for instance, is a common practice along with ‘chinkon’ meditation which involves visualizing leaving the body just like the travel sense of astral projection and remote viewing. A simple life of mimicking an art of peace instead of an art of war is the ideal aspiration for the height of maturity.

Each Kami spirit is implied to be of a harmonious nature, varied on a scale of progressive evolution. In respect to Kami, spirits make the choice to evolve from the nature of Kami they are. Sin does not weigh the scales of justice, but the denseness of how pure the spirit does. Impurity comes from the acceptance of evil influence. There is no reward system of good or bad, although there are places like the High Plane of Heaven and the Dark Land. Families are thought to be grouped in Kami sectors within an afterlife construct and ways to invite people to the list of communicating energy are available. The destination of one’s spirit isn’t absolute, however, and the estimation of a journey largely depends on the conditions of one’s belief.

If respectful coexistence is the universal backdrop of the canvas of the nature of Shinto, then the painting would be the lifestyle as such that one may portray. After an unsaid amount of sake, if any, a spirit floats above the physical body to witness the natural churches in the forms of trees and stone in the backyard of the world. The selected graces of existence are observed in awe inspiring respect for their potential ability to be a conduit for Kami energy transmission (Yoshiro). Each animate and inanimate thing is a candidate to be a Kami satellite and the efficiency varies. Since all ‘things’ are Kami, appreciation to the likes of many are acceptable in as many forms as needed.

## Taoism – 150 million members

This method was benchmarked into canonized thought about 577 B.C.E. in China by the legendary Lao Tzu. Although a generic name of sorts, the ‘Old Master’ is regarded by many to be the supreme observer of equality and is credited as the author of the Tao Te Ching, the eighty-one chapter, five thousand pictogram holy text of Taoism. To say the work was written in one night, as the story goes, by the request of the gatekeeper before Lao Tzu’s departure from existence, is often looked upon as non-credible. The Taoist philosophy is predicated to the estimated date of authorship and is plagued by the common problems of historical record. Either way, the collection of writing is proposed as the standard representation of Taoism / Daoism because of its implied spiritual and creative dimensions.

Tao (the way) is considered best achieved when balancing energy in transcended equilibrium. The aim of internally structuralizing by means of virtue to co-produce the external structure of the self makes this philosophy highly compatible to other beliefs. ‘Chi’, the essence of life, portrays the aspects a Taoist observes and appreciates, that which is the natural flow of the operations of existence. ‘Wu-wei’ is the concept of letting go of everything and resetting to a natural state of being while knowing when to properly interfere with the essence of existence, all while remaining in a state of non-action. ‘Pu’ is referred to as the structure of nothing and can be defined more in parallel with the ‘The essential nothing’ passage of this work.

The similarity of Taoism and *oneiszero* can be explained by the direct accordance to its rules. Observation solely through the senses can only distort true reality. Exception is the universal law in which all things exist and non-exist. Exception is the law equating to all other universal laws. There are no rules in the process of eternity, but the fundamental understandings of virtue and equality are suggested to be more progressive when traveling the course of the way. The link between the two philosophies results in the usage of non-defined terminology, optimistic in the areas of love, trust, and contentment of all there is, limited only by the scale in which the language is understood.

Of course this is only a guess to relate. The structural system of the Tao has been stylized into crystallized form in numerous ways. Wujii (Without Ultimate) is said to be the infinite nothing and Taiji (Supreme Ultimate) is said to be the infinite existence birthed from the primordial universe. Balancing the dual nature of existence became represented as the yin and the yang. Understanding the mutual varieties within this symbol remains empirical for a non-dualistic way of thinking.

The polytheistic natured version of Taoism places the San-ch’ing (Three Pure Ones) on the top of the pantheon of consciousness. The prime gods are said to be the ultimate self-manifestations of chi (qi).

The Jade Purity, the Universal Lord of Wujii, the Most Supreme, creator of Earth, space, and heaven, this nothing before the beginning is said to be the essential source of the source. Residing as the Omni-All of Taoists, the Eldest is said to sit upon a throne above the Heaven of Yu-Qing (Jade Mountain) which is gated by a mystical golden gated portal.

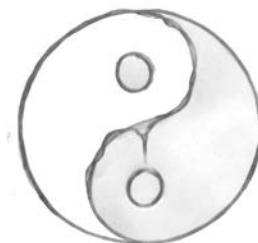

The Jade Purity created the Supreme Pure One, the Universal Lord of Tajii, The Keeper of Treasures, the god of dual natured existence and the divisions of time. The first born deity is said to sit upon a throne above the indigo clouded Heaven of Shang-Qing and over the godly residence of the Rui Zhu mansion.

Together, the Jade Purity and the Supreme Pure One created the Great Pure One, the Universal Lord of the way, their self-manifested earthly representation. Lao Tzu, the Grand Supreme Elder Lord, is credited with being called Lord of Man, he is said to be born of a virgin mother from a prestigious family and sent divinely to be a savior of humanity, later to be sitting upon a throne above his heaven of Tai-Qing.

In the continuation of life after death, our integral microcosm structure emits our external macrocosm structure, leaving the possibilities of recreating ourselves to the rim of comprehension. Role models of prestigious status excelled in thought as they are said to have attained spiritual immortality through good deeds and fair living. Master shamans, wizards, and magicians have been said to be plentiful in number and some included are the Eight Immortals of Chinese mythology. These Eight Immortals are icons of enlightenment and the dilatation of human potential. Dragon king stories set aside, these awkward magicians whom are usually identified with their equipped relics are roughly regarded as followed: The chief who slays demon dragons with a sword, the cripple who heals the sick with a gourd and travels remotely, the enlightened drunk flute player who acts like a fool, the donkey rider with a bamboo drum, the fat bellied reviver of the dead with a fan, the communicator with the flower basket, the well dressed with a jade tablet and a castanet, and the teen with the lotus. These immortals are often regarded as androgynous and the stories surrounding each are plentiful.

Note: Standing as an alternate precept, the bottom of page .02 is similar to that of Chapter 12 in the Tao Te Ching by matter of circumstance.

Symbol: Yin-yang

## Confucianism – 6 million members

Kong Fu-Zi (Confucius) would be a staple which adapted the known structure of Chinese tradition into the form of his name. Historically born around 551 B.C.E. into a warrior class family, Kong soon found himself fatherless at the age of three. Raised by his mother in struggling conditions until the age of seventeen when she herself perished, Master Kong quickly became renowned for the advancement of his intellectual understandings. Married by twenty years young, Kong was already set in the ways of extensive research. The deft thinker accommodated himself in the religion of learning throughout the years of his life. As legend describes, Kong regarded Lao Tzu as a master elder teacher whose cognition was in parallel of that of a dragon. The breath of Kong spoke multitudes in volume and the structure which embodies his name can be defined within the Confucian Canon. The basic principles in regards to the conditions of belief and life can therefore be loosely summed up with the teachings of the Si Shu (Four Books) and the Wu Jing (Five Classics).

The Four books are as follows: Lun Yu (Analects of Confucius) is the work comprised of the discussions of the teacher, Master Kong. Ta Hsueh (The Great Learning) is an outline for the discovery of maturity through the course of one's life and a reflection of a more defined version of the 'good' person. In this manner, the person is the root of the community tree, the strength of which depends on the quality of the roots. Scientific observation is encouraged to be accumulated for the course for further studies all in the name of investigation. Meng Tzu (Mencius), as a result of the disgust of kings, wrote a collection in which stated the essential necessity to recognize the ignorant choices in human nature. Further, the feelings associated with compassion, like the guilt and shame of witnessing unfair living, were prime sources of learning and should not to be neglected. With this mentality, an overview of personal interaction, a scale of the value of 'man', the ruling element of leaders, the living conditions of families, and the honest curriculum of both society and education are redefined. Chung Yung (The Doctrine of the Mean) is the noble extension to help define the balance of the yin and yang.

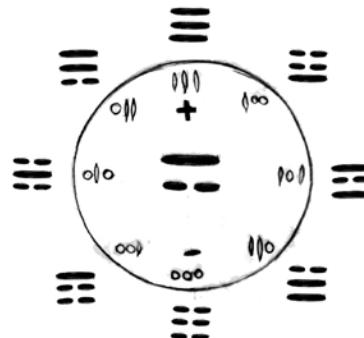

The Five Classics are as follows: Shu Ching (Book of History) records the microcosm canons of Yao, Shun, and the dynasties of Xia, Shang, and Zhou. Ch'un Ch'un (Annals of Spring and Autumn) accounts in detail the twelve rulers of Lu, the birthplace of Kong. Shih Ching (poetry of The Odes) is a collection of three hundred and five classic folk poems. Li Ching (Book of Rites) details ritualistic customs as honorary to the likes of owed appreciation. I Ching (Book of Changes) is a times table of advice with the help of eight distinct elements. The I Ching is cherished as a treasure box of wisdom. By the means of flipping coins to add up numbers, corresponding two elements of an eight by eight times table leads to sixty four possible results to offer specific advice and can be looked upon daily or as needed if something may be troubling. In binary respects, the similarity to the sixty four codons of DNA is extra ordinary and also has been unconventionally related.

The history of Chinese tradition and the mythologies adhered to the multiple regions is a compelling vast network of interconnecting textual canons. In order to unite the realm of expansive belief, certain measures were subsequently fastened to try to contain the comprehensiveness of it all. While taking into account Pan Ku, the creation story of the eighteen-thousand year young egg incubating to form the construction of polarity and existence, alongside with the Queen Mother, Goddess of the West, who is also the complimentary respect of the Jade Purity, Kong would go to recede to the level of human potential. Since human dictation is often guided by non-human means in relation to the religions of the world, the elimination of such characters would avoid strict adherence to conditioned thought and this would allow for the afterthought of fair living within the boundaries of what happens to be manageable by solely human means. The mode of belief changed internally with the concept of Heaven as a state of mind through self-perfection of the virtuous integrated self.

Humanity, as it is, should be more concerned to be a universal community with common goals and to project the evolution of togetherness. The individual construction of the self remains empirical as the source of the foundational structure of a group of people. Through the effort of constant self-improvement, the affect and effect would be reflected in community improvements. Ways in doing so are explained in detail by the select doctrines and lived out by the manner of customizable traditions bred from the specific collection of texts across the board from many styles of beliefs. Through viable means, community matrices could extend and grow together with the heavens in a correct state of union which is balanced and fair. When by-passing the reward system of the incomprehensible afterlife, life is considered its own reward in which human interaction is a gift in itself and should be appreciated as sacred.

The perspective of law and order when coupled with basic human rights is a major fundamental difference separating Confucianism from other doctrinal bodies of thought. The political nature in which rulers should learn how to see themselves as equals instead of alpha states is brought into awareness more as a whole. The meeting in the middle transition of royalty to commoners is still an idealistic concept which remains unsatisfied due to the many vigorous titles of prestige. The widening gap of economic separation between the rich and poor is quite noticeably seen with the furthering hardship of the less fortunate in comparison to the state of the more fortunate. The course of human progression lies within the ability of moral development beyond these current standards and the template left in Kong's name is often a reminder of this dilemma.

Symbol: The eight trigrams

## Zoroastrianism – 200,000 members

What can keep being said about the riddles of the past and the bread crumb trails which are meager even to a beggar? The calculations of these dates range from many thousands of years ago as the origin is cloaked with an unusual hidden history. Monotheistic in tone, polytheistic in will, these complex conversions of belief are lost in the common modern eyes. Some basics of Zoroastrianism and a foolish speculation of some related mysteries lost will be viewed upon.

Zurvan is said to be the god of the time before time, without gender and all genders, and to pre-exist the dual nature of existence. From Zurvan spawned twin divinities of the cosmic order. Standing as the ultimate good, Ahura Mazda mirrored Angra Mainyu whom stands as the ultimate evil. Before the pairing of the two, each hibernated in their counter-composite purely good and purely evil egg. Under this umbrella of conjoined poles, where fire is the ultimate symbol, light and darkness reign kingdoms with regard to each other. Ahura Mazda is regarded as the divine supreme being of all good things which radiates the essence of asha, the supreme law of order. Stories portray him building everything with thirty-three steps called Alaats which are replicated by thirty-three rites of passage. Angra Mainyu is called by many names from those who crown him under the titles related to a king of darkness. The anti-radiance from him is druj (drug), the essence of utter confusion, and is the repelling agent of asha.

The dual nature of separation would be highly prevalent in a painting which looked like the invasion of disease onto a perfect utopian kingdom. Humans born are considered naturally good until making the choice of falling into temptation of evil. The main decision is to pick a side of good or evil. In that individual perspective is what chooses the colors of our painting. Those colors, that is, that make up an ideal perfect kingdom of either, good with evil as a disease or evil with goodness as a disease. The battle of the sky god versus the underground god has yet to come to pass and is projected to be an apocalyptic setting of a final judgment with the coming of a new savior. The perpetual operating system is said to be guided by a holy spirit called Spenta Mainyu. The Amesha Spentas (Holy Immortals) are said to be six individual and distinct coexisting entities without form, creating together a perfect circle of Ahura Mazda. Angra Mainyu spawns counter equivalences as the kings of liars, those who are the destroyers of integrity, devotion, desired rule, wholeness, immortality, and mindfulness.

|                                |                |           |                   |             |            |              |
|--------------------------------|----------------|-----------|-------------------|-------------|------------|--------------|
| Arch Angels under Ahura Mazda  | Asha Vahista ♂ | Armaiti ♀ | Khsathra Vairya ♂ | Huarvatat ♀ | Ameretat ♀ | Vohu Manah ♂ |
| Neutral Element                | Fire           | Earth     | Metals            | Water       | Plants     | Animals      |
| Arch Demons under Angra Mainyu | Indar          | Nanghait  | Sawar             | Tauriz      | Zariz      | Akroman      |

The reincarnation of good and evil is said to occur from time to time in the form of prophets and anti-prophets. The chosen prophet by Ahura Mazda who is credited as the founder for this religion is Zarathushtra, also called Zoroaster. Said to be born of a virgin mother, the biography of Zoroaster is extensive. The story states how during a walk down by the river, Zoroaster was confronted by Ahura Mazda, with his six Amesha Spentas, and embedded him with divine revelation. Transmitting the information of this epic battle of good versus evil was all Zoroaster thought about thereafter. At the age of thirty, he began orally projecting the poetic hymns, later to be written down, which stated how salvation can be attained through sole devotion to one 'Wise Lord'. The written version of his words would end up being the central holy text of Zoroastrianism, the Gathas. The textual canon for Zoroastrianism is the Avesta and comprises of many other texts. The influence upon the ancestors in which mythology was born should be taken into account as the styles of prose remain similar to that of the Vedas.

The Mithra religion predicated Zoroaster and Zoroaster recognized Mithra as a 'Yazeta', a divine consciousness who can be regarded as an Earthly manifestation of Ahura Mazda. Many sun god things can be said about Mithra. Certain sources state the usual, said to be born of the immaculate virgin mother of Anahita, born on December 25, visited by three magi at birth, bringer of salvation, the light of the world, a master teacher with twelve followers, crucified, rose again to life after a three day death period, among having rituals like baptism, and bread and wine offerings.

By implication, the suggested number of beliefs under this umbrella of thought can be drastically different. Even though the positive aspect stands superior over the negative, demonology and dark magical arts should be noted with the masks of the occult, claiming still to their supreme god, their unholy dark one. Rituals, chants, sacrifices, and prayers aside, the secrets are held by the masters of the initiates in the mystery schools of the ages in both 'good' and 'evil' practices. Although an almost extinct religion, the prime source of knowledge will continue with the keepers of the faith. Mostly sectored in small parts of India and Iran, the influence of this single deity authority flourishes certainly with the elements of associated religions. The emphasis on a final absolute destination of a soul in, either, heaven, an intermission area, and hell, based on a reward system of actions, were all recognized and highlighted here in the voices and words of the believers. It is said, judgment will fall upon the soul after a three day pending period after one's death and then the soul will be guided to either the light or the dark based on the scale of the lightness and darkness of the individual.

Symbol: Pot of fire

## Judaism – 15 million members

When chronologically speaking, years can mean many things as well the length of a day. Despite the unbeknownst conversion chart, creation from the words of Genesis has been both aligned and misaligned with historical evidence. In the time immediately before the flood as well as the time after the flood, a series of events are said to have taken place and is recorded by what can be generalized as the Old Testament. The Torah and the Talmud are other central terms to embody a kind of faith within Judaism, but the entire canon is a compiled number of texts and commentaries with core selected translations. El, Elohim, YHVH, Yahweh, and Jehovah are some of the names for the god who instilled the teachings into Moses on the Egyptian mountain of Sinai. From the engravings within his soul and the tablets of rock, this monotheistic law of life became born after the verses became sound and is often recognized as the only true divine intervention between an alpha god and a human.

The Hebrew time table is on a curve scale of which regards Adam and Eve becoming the parents to over fifty children who spawned the population of the human race. Through the lineage of Adam holds the royal founders of this religion. In time begat and generations passed, from Adam to Noah to Abraham to Isaac to Jacob and the twelve tribes of Israel, Hebrew teachings have developed the backbone for the body of Judaic belief. The first five books of Genesis, Exodus, Leviticus, Numbers, and Deuteronomy represent the books of Moses, referred to as Chumash (The Law). The next eight books of Joshua, Judges, Samuel, Kings, Isaiah, Jeremiah, Ezekial, and Trei – Assar (a collection of the twelve prophets of Hoshea, Joel, Amos, Obadiah, Jonah, Micah, and Nahum, Habakkuk, Zephaniah, Chagai, Zechariah, and Malachi) are referred to as Nevi'im (The Prophets). The next eleven books of Psalms, Proverbs, Job, Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra (including Nehemiah), and Chronicles are referred to as the Kesuvim (The Writings). The outline of the twenty four books of the Tanakh (Hebrew Bible), sewn with threaded thought, lays out a contractual promise as well as the blueprint for the plan of the world and heavens with the arrival of a new messiah and a new kingdom.

Monotheistic in tone and will, the central law states the primary overrides all secondary. Genesis 6 and Numbers 13:33 describe the sons of god, the Nephilim, who bred with the daughters of man. These wealthy beings, seemingly born of the likes of fallen angels are the evident paradox. These giant, long necked serpents were said to be defeated by the instigation of the arch angel Gabriel, but the point here is to show the mention of certain distinct, non-human beings existing pre-flood. Furthermore, this leads to a few assumptions of possible locations for the other places associated with them in a multi-dimensional plane of existence.

It is believed, the destination of an afterlife is not one which will be reached, but rather one which will be given. The preparation for the kingdom of a god is predicted as a script to be fulfilled. The deeds of an individual during a lifetime will determine the mindset of the soul which will resemble a heaven-state or a hell-state, but not necessarily a destination or a construct. When the parallels are associated with constructs, however, the spectrum of places range from Gan Eden, the omni-blissful state to Gehinnom, the punishment factory intended to atone the unrighteous and incinerate the unworthy. The submission to a creator's will as the sole authoritative stance, one not to be questioned, is said to be the only way to redemption. The corresponding texts state all will be subject to judgment for an inevitable transformation of the continuation of souls under the will of one god.

Other aspects exist where absolution is less focused. When speaking of private modes which dissected the teachings, the mystical Kabbalah forms. Alchemy is the practice of which the Kabbalah speaks. The esoteric understandings, thought of as magical and ranging in different intention, serve as an anomaly. The anomaly being the hidden mathematical intellect leading to transcended knowledge only decoded in some unknown circles. One can only imagine the guardianship of the keepers and the trading of hands of secrets. Physical incantation stories and wizardry aside, the ancient teachings passed down through the mystery schools and the select secret societies were significantly ahead of their time.

The study of the tree of knowledge is said to be the introduction to cosmic knowledge. While many factions within the Judaism circle comply to like parts and demonize other parts, the roots of the whole would show a more complete story. The twenty-two paths mimicking the twenty-two letters of the Hebrew alphabet plus the ten Sephiroth spheres of the tree of life equate loosely to the Zohar thirty-two paths, combined together to make the thirty-third path. The ten Sephiroth spheres are also said to have an additional three spheres to combine to make thirteen. These additional three are said to be the base zero origin.

The mixture of elements and sacred sequences of precision remain the mystical courses of secret Judaic study. The treasured objects, language, and numbers can also be found in contemporary physics and science. The scope of the Kabbalah is muted in the archives, but can be presumed by the arcane wisdom which is now more in the public eye. The study of phi (Fibonacci sequence / the golden ratio / golden spiral) and how it incorporates into a grand puzzle piece structure with its numberless qualities in creation, matter, atmospheres, organisms, and life would only start the examples. Another example is the study of the five platonic forms, which build the physical crystal make up the entire universe. These shapes are a three-sided tetrahedron, a six-sided hexahedron, an eight-sided octahedron, a twelve-sided dodecahedron, and a twenty-sided icosahedron. These geometric origins would start the study for concurrently worshipped shapes.

Symbol: Star of David

## Christianity – 2.3 billion members

'The Father, the Son, and the Holy Spirit' is one of the most revered phrases in the current life cycle. 'The Mother, the Daughter, and the Wholly Spirit' may be in another life cycle somewhere, but the defining qualities of each religion always have their undeniable shining points. 'Christ consciousness' is a term to describe the thought process of the most popular honored enlightened soul and is the striving goal for like minded individuals sharing the umbrella of faith. The critical figure of human history in which the year zero was created goes right by side with the most printed book of the world, the Holy Bible.

For the most part, the primary text of Christianity is the New Testament. The collection of the twenty-seven books, written by different authors alongside with thousands of translations, contains the contract of Christian belief. The word of Jesus, the sacred colored letters, contends to be the most mature voice of reason. The maturity demonstrated is said to be what attracted the harsh criticism which eventually led to the gruesome and emotionally charged scenery of a roman crucifixion. After the event of this crucified death, the lighter versions of salvation for the atonement of human sins arise in a body which dematerializes into spirit. The pre-existing books of the Old Testament combine to make the general complete version of the Holy Bible. The extent of this collection can adapt into many customizable beliefs. If Christianity is considered a white light, the denominations would be the shades of color comprising the whole. All within the light spectrum is said to be related by simple means of association.

While standing on the shoulders of Judaism, like for example, inheriting the Ten Commandments, the methodology of salvation is said to be attained by following the examples and attributes of the Jesus mind. Roughly a third of the entire population is embedded with Christian beliefs and the denominations across the world vary in number of 35,000 or so. The source beliefs derive from a Jesus ideation translated and then shared upon with written commentaries. What version of Jesus Christ one defines is a personal choice.

Most stories and rituals aside, Jesus of Nazareth is the principle founder of what would eventually be called Christianity. Said to be born of divine lineage from the Patriarchs of Judaism to be the chosen one and un-adopted by Judaism, the Jewish Christ would stand to rebel against the tyrants of the age. Whether divine, human, both, or neither, the prophet of reputation is said to have displayed unworldly characteristics, powers, teachings, and understandings. According to scripture, the curriculum of enlightenment taken from the prodigy of the world is unknown until a recorded public life at the age of thirty. The implored method of a Jesus mind is the opposite side of an animalistic survival thinking mind in which the compassion for others is held first before the consideration of the self. As commonly believed, many angles can be said and many paths can be chosen as long as the way to eternity is solely through the faith in the suggested most perfect being.

The road to heaven and hell has been portrayed in just about every corner of the world. The Divine Comedy has come to be a standard visual portrayal of a Christian afterlife quest, built of three books with thirty-three chapters a piece. Together the work is composed of fourteen thousand, two hundred and thirty three lines of poetry depicting the layers of hell, purgatory, and heaven. Details of the literary epic will stay within its own construction. The basic acknowledgment which should be noted is how the multi-dimensional deities portrayed are largely accepted to exist in unknown ways within the kingdom of an ultra-god.

Saying something wrong is inevitable when saying anything at all, but the contradiction of unconditional love comes to mind when regarding monotheistic tones. The word play of defining holistic sources becomes tricky depending on what ones beliefs are. The notion of an afterlife is generally left in the hands of a savior and is unique to each believer based on a hopeful curve scale of forgiveness. Logic states trusting within goodness will lead to a good source and this is the common understanding. However, adopting the spiritual Jesus symbol to be a mascot for an organization with an alternate non-Christian agenda becomes easily apparent over time with the intentions and actions involved by the group.

If the genetic information of Jesus was readily available, and if mass producing clones of Jesus-beings by means of DNA were possible, one could essentially build an army of Jesus'. As an army of a hive mind, the potential uses of a Jesus army would depend. The dynamic difference would be the mindset of the corresponding minds. Would the Jesus' be with a peaceful sword which would render only to be defensively useful or a violent fire sword which would render to make a trail of bodies for a father god? A prince of peace and a prince of war would carry each of their own titles based on the actions which would be taken.

The obvious states the mature mind of a Jesus and any number of clones would not pick up a single sword to harm, nor retaliate in revenge a single time. The enlightened state of infinite love, understanding, harmony, equality, peace, caring, forgiveness, modesty, friendship, open-mindedness, and joy are the basic principles of a Christ consciousness. In the hive mind of a conqueror, the anti-Christian principles of infinite malice, confusion, distortion, imbalance, war, hate, vindictiveness, arrogance, unfriendliness, closed mindedness, and loathing on the other hand, are the opposite attributes. With each at their helm, scenarios would play out according to one's belief. Will the need be appeased if the brothers were to meet? The swordsmanship of Jesus is unknown, but this leads one to wonder what the scripted scenario would look like, streaming as a high definition three-dimensional movie using holographic models in the sky. In the predicted last event of humankind, it is still undetermined what kind of transformation would occur after the resurrection of the many prophesized themes.

Symbol: Cross

## **Islam – 1.6 billion members**

Although not adopted by Judaism or Christianity, the continuation of the monotheistic tone manifests itself again with the religion of Islam. In belief, within a small cave of Mecca, Saudi Arabia, the incitation of Allah was sparked when the arch angel Gabriel, holding a golden tablet, infused the message of the Qu'ran over a number of years through a divine conduit named Mohammed. Spoken by Mohammad after 610 C.E., the verses would later be written to become the primary holy text for Islamic faith and is often thought to be the third testament, the last word of a supreme god before the ultimate judgment. Allah is the name which Islam submits to in Mohammad's faith and is also compatible to the beliefs of the same similar ultimate supreme deity over ruling the cosmos in an everlasting omni-authority. The androgynous deity is thought of to be the supreme good, the venerable operator of all existence holding all the keys and completely void of evil. Allah is graced in having ninety-nine names, revered often by reciting prayers with the help of three groups of thirty-three beads. The basic connections involved, as with all things, are worth taking a brief look.

The transforming remnants of the Sumerian culture can be seen in nearly every part of the world including the shamans of pre-Islam who were said to be Arabian magicians. The advancement of esoteric knowledge of pre-Arabia is regular household terminology disguised in the cartoon-like imagery of genies, magic lamps, and flying carpets. This realm of thought hovering above the Arabian ideations at the time can be considered with the possibility of being influenced by alternate teachings of seemingly non-human intelligence. Interestingly enough, this pre-Allah era, shows signs of Al-ilah being the supreme chief mood god, reigning over a polytheistic spectrum of lesser gods, whereas the sun was the female aspect. Under Al-ilah, otherwise known as the moon god Hubal, is the trinity of his children, thought of to be daughters as they are named al-Uzza (mighty one), al-Lat (the mother), and Manat (goddess of fate and death). Not usually accepted by believers of a single authority, the anomaly of the same single god begins at Kaa'ba.

Kaa'ba is the most sacred shrine to the nation of Islam. The intricately designed and re-designed holy building stands as one of the pillars of faith for Islam. According to theory, it was built by Adam of Genesis fame and then rebuilt by Ibrahim (Abraham) and his son Ishmael. Before Muhammad and his followers conquered Mecca in the name of Allah, there was said to be three hundred and sixty idols of worship alongside with the highly worshipped Black Stone. Muhammad destroyed the idols, but kept the stone which is said to be both fallen from the heavens and a meteorite from a number of chosen star systems. The debated question is if the tribal influence invaded the building after it was built, or if the building was built by a different source than what is believed. Evidence shows connections with Hindu gods, and if that were to be the case, the stories of Adam and Noah would be a slight bit more plausibly related with the story of the Hindu first man and survivor of the flood, Manu, who is said to reincarnate himself as needed for the guidance of humanity. This implication of relation between corresponding religions is purely speculation, but for the spirit of learning, works like 'World Vedic Heritage: A History of Histories, Presenting a Unique Unified Field Theory of History that from the Beginning of Time the World Practised Vedic and Spoke Sanskrit' by Purushottam Nagesh Oak, shouldn't be completely demonized as the work of a lunatic and instead, by thorough investigation, be subjected to meticulous analysis with non-biased evaluation. Under counterpart thought, Dionysus, Yima, Yu, Utnapishtim, and Ziusudra would be other names to include with Noah as well.

The body of Muslim belief can be outlined by the five pillars of Islam. The first pillar is 'Shahada', the self-initiated complete submission to the single authority of Allah. The rest of the pillars are in no particular order. The pillar of 'zakat' is the act of alms giving. Community hospitality is mandated to help restore balance of economic structure and strength. The fixed price of obligatory charity is two and a half percent (02.5%) of one's ownership. It is usually believed that afterlife credit can be accumulated by extra donations. The pillar of 'Sawm' declares fasting as a form of self-sacrificial devotion and is generally accompanied by the cleansing of the body of negative deeds and the reaffirmation of faith in the month of Ramada. The pillar of 'Salat' comprises of the five sectioned parts of the day from morning to night. Every day becomes a passage of rites and the configured worship of the five ritualistic prayers (Fajr, Dhuhr, Asr, Maghrib, and Isha'a) shared by all Muslims reflects only partially the amount of devotion to Allah. The last pillar of 'Hajj' is the obligation to visit the glorified land of Mecca. 'Jihad' is an additional pillar which states the mission of Allah. The mission depends on how passionate one feels about converting non-believers and how much one is willing to do for the faith. Other pillars exist depending on specific customized beliefs.

The six articles of faith can be summed up in a sentence: By pledging allegiance to Allah, honor is to always be given to the angels, prophets, and scriptures of Allah's will, just as the will itself should be honored even all the way through the final judgment until the day of resurrection. The compliance of the rules of Allah is thought to grant favor in the Islam reward system. The afterlife of a Muslim warrants both a heaven and a hell. It is thought that a righteous Muslim will bask in seven heavens of promised rewards, with incentives including beautiful women. A wicked Muslim is said to reside in a spectrum of layers based on their misdeeds with a diverse kind of punishment, but is not guaranteed to suffer forever. Warriors of Islam are supposed to get extra credit and the enemies of Allah are said to be eternally damned. If the angels and djinns are preparing for an end all war of wars, their willful intent will be shown by the scale of destruction. If violence is to be the designated case, it is a simple wonder if there is going to be a judge of judges, watching those who partake, revel, and participate in an end time apocalyptic setting of any of the cataclysmic religions.

Symbol: Crescent moon and star

## Sikhism – 25 million members

Guru Nanak founded this religion around 1500 C.E. in India. Born as a prodigy of prophecy in Sahib, Pakistan, the young selfless guru rejected the ways of ritual on his left Islam hand and his right Hindu hand. As a poet, his evolution pinnacled after disappearing underwater for a three day enlightening bath. Nanak emerged undivided from the river stating there is no Hindu and there is no Muslim and for the rest of his life devoted himself to the ways of Oneness while vigorously opposing the likes of a caste system and any hierarchy with any number of supernatural gods. Monotheistic without a form to worship, the prophets are thought to be external microcosms and internal macrocosms of the ultimate formless form.

Following Nanak's train of thoughts (1469-1539), nine gurus succeeded in sequence. These nine after Nanak were Guru Angad (1539-1552), Guru Amar Das (1552-1574), Guru Ram Das (1574-1581), Guru Arjan (1581-1606), Guru Hargobind (1606-1644), Guru Har Rai (1644-1661), Guru Har Krishan (1661-1664), Guru Tegh Bahadur (1664-1675), and Guru Gobind Singh (1675-1708). The compilation of the ten guru's holy texts became known as the Guru Granth Sahib. The work collected speaks of an Omni-ultimate essence, encompassing all things, including the unknown and the infinite possibilities of nature. A universal god of a universe full of gods, this supreme persona is formless, although not limited to, and genderless until it manifests itself as otherwise. It is said, through personal dedication, salvation exists with the conjoined union of the ultimate universal source of eternity.

Sometimes called a reformed version of Hinduism and Islam, this background independent religion can stand alone as a land of men and women called the strong lion hearts and the beautiful princesses. Through the Sikh way of life, simplicity overrides the complex nature of doctrine. The central beliefs valued along with a monotheistic tone are family hood, togetherness, and universal equality. Spiritual appreciation is offered to Nam (one of the many names of an infinite bliss) with the daily practice of three prayers called the Nit-nem. Some of the verses glorifying Nam in the 'Japji' by Nanak are recited in the morning, nine hymns called the 'Rahiras' are celebrated at sunset, and five hymns called the 'Sohila' are graced before sleep.

Mimicking the examples of their leaders, five articles of dress quickly identifies a Sishya (Sikh) disciple. All starting with the letter K, the five are: Kirpan (a mini-sword acting as a symbol of protection), Kesh (uncut hair acting as a symbol for devotion), Kangha (a comb acting as a symbol for discipline), Kara (a bracelet acting as a symbol of unity), and a Kachera (undergarments acting as a symbol of moral character). The loose shorts are a reminder to the Sishya of the five evils (lust, greed, pride, anger, and material attachment) which deceive the conscious spirit from its divine order within the human shell.

Being able to see the divinity within the human shell of all people regardless of any lines of separation is encouraged and praised. Women too, are specifically considered in a community of equals and marriage is regarded as a holy union of two like-souls who are preparing to have a shared eternity together as one. Giving rather than receiving is a normal way of life and the helping of another individual is considered to be a gift. In this gift, joy accompanies charity and is revered to be its own reward. This selfless service is called 'seva' and becomes a habitual way to serve Nam.

Other ways of appreciation are offered at designated shrines of worship called 'gurdwaras'. The center piece of these locations of worship is the Guru Granth Sahib holy text. In the presence of the centered holy book, all are welcomed to visit as long as the proper respects are paid. Sobriety, lack of any possession of intoxicants, clean hands, becoming shoeless, covering ones head with a turban, and bowing to the book are mandatory when entering the central book room. These community centers act as a place for fellowship gatherings called a 'sangat'. Shared ideas for the greater community good concerning any issues at hand can be held there. A community kitchen is also included within a gurdwara and large ones typically serve a daily vegetarian meal for the sishyas participating. A gesture to represent the character of equality can be seen at the place of the shared meal called a 'langar'. During these meals every single person sits on the floor to show how everyone is on the same level. Prayers, hymns, poems, and songs are all included to focus on the main purpose of worshipping Nam. The most holy of locations is the breathtaking Golden Temple in Amritsar in Punjab, India.

Meditating on the names of Nam is said to cleanse the mind of impurities and reset the mindset into the natural level and trustworthy rhythm of the perpetual divine. The formulas of deeds, making the karmic equation, result in the present dictations of now. Through the acts of fair living and honest occupation, the steps to liberation are said to be trusted in Nam's will. The reincarnation of the soul will be directed according to the cosmic order and liberation will be achieved when the individual comes into terms with the passive submission to the eternal blueprint. Since spirits are born equal, the destinations for rewards and for punishments are illogical since the true nature of the spirit is free and limitless. The creator knows all possibilities and choices, therefore is incapable of any judgmental response. It is said, mystical experiences of spirituality are not something which can be taught, but rather learned and only by self-perseverance through the will of Nam can true nourishing feelings of the divine be reached. All literature and religions are recognized because the All is the will of the divine one. Dwelling on the impending moment of a godly apocalypse is a waste of effort and the energy spent would be better spent instead on the love and care for the world including all of Nam's equal children.

Symbol: Khanda

## Baha'i – 7 million members

In the namesake of a god, the fusions of the material and the immaterial make the infinite microcosms of the unknown infinite macrocosm. The indefinable nature of this presence acts as the prime medium of division. All this fuss over who owns the property rights of creation, yet all should agree, if it is an It, It is an encompassing infinite zero source, a starting single source of infinite replication, a source beyond infinite measure and yet measurable in increments, a source without a name yet also an omni-name, a source perpetuated by the absolution of its nothingness and everything-ness, and a source directing eternity in a seamless grace with the electrically charged powder-coated material substance of polarity. The Baha'i faith is believed to be a modern vision to describe an ultimate universal god through the means of divine conduits. The main premise is comprised of a body of guidelines to encourage world unity and equilibrium between all humanity for all future generations.

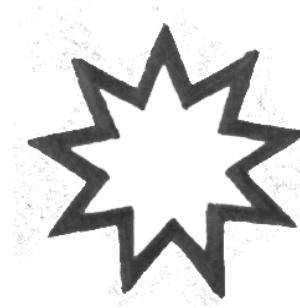

Under the pressure of strict Islam influence in Iran, unconventional beliefs were crystallized into form by a series of individuals. Mirza Ali Mohammed, otherwise known as the Bab, became the self-anointed prophet to be equivalent to all other universal mentors of the Earth and claimed even to succeed the most holy of texts. Rejecting notions of submission to Islam's curriculum, his message of holier extreme dedication caused the usual highly tense conflict between these close parties. As a disciple of Sayed Kazim Rashti, the Bab's Shaikiya beliefs of propagated incarnations would come to be more refined. The stirred up tornado the Bab had induced accelerated even more so at the site of his execution by an Islam and Christian firing squad in 1850 C.E. His unfinished work of the Persian Bayan was left to be a template for yet another self-manifested incarnate of the ultimate divine.

The prodigious child who is said to fulfill the prophecies of Bab is the same who would come to be the founder of the Baha'I faith, Mírzá Husayn 'Alí Núrí otherwise known as Bahá'u'lláh. One can only astound at the stories of human survival in the midst of horrible circumstances. The course of his trials would mostly begin once targeted as a known affiliate to the Bab. The testament of Oneness was his calling, and during the course of his life, he withstood the punishment continuously given to him. He was arrested and beaten in Amul, Iran in 1848 C.E for the practice of following the Bab. Then he was arrested again when the Bab died for being an affiliate. He was imprisoned in what is called the Black Pit in the prison confines of Tehran, Iran. After his sentence, he was banished from the area and forced to journey over the harsh conditions of the mountain passes and relocated to Baghdad, Iraq. After over a decade of transforming the community with his stature and belief, he was banished even further west. For four months the people of Constantinople praised him for his majestic personality before he was banished again which led him to the cold and isolated Adrianople. The grueling conditions of his travels also came with positive interactions along the way and the magnetism of his charm attracted all kinds of people everywhere he went, except of course, for those upholding the traditional rules of Islam and who felt threatened by the natural element of his soul. Yet again, he was banished to Akka with his family. Escorted by authorities, he was led to his new place of residence, where the Sultan wanted to extinguish any remaining glimmer of hope in his mission of belief. Little did the Sultan know, his exuberant soul would come to transform the decrepit gloomy city. Upon his arrival, strict regulations kept him at bay from any social interaction, but throughout the course of his stay, the shining noble character persuaded the authority to slowly disintegrate the shackles bound on him. Through all the misery placed upon his brow, he ascended to the pinnacle consciousness of spiritual attainment. Once his threat level was understood as nil, his freedom to enjoy the nature he endeared so much had come around full circle. Without weight holding him down, the compounded beliefs of his writings throughout his travels spread vigorously world-wide.

Among the many works, the Kitab-I-Aqdas is regarded as the central textual work for the universal belief of Baha'I Oneness. The outline of the faith can be looked upon with the self-evident titles of the twelve principles of the Baha'I faith. Starting with the first, 'The Oneness of Humanity', followed by 'Independent and Unfettered Investigation of the Truth', 'Religion is Progressive and All have a Common Foundation', 'Religion must be the Source of Unity', 'True Science and True Religion must Correspond', 'The Equality of Men and Women', 'Removable of all Prejudice', 'Universal Peace upheld by a Spiritual World Government', 'Universal Compulsory Education', 'A Spiritual Solution to the Economic Problem', 'A Universal Auxiliary Language', and ending with the 'Universal House of Justice with the Davidic King' principle.

Obscured in the veil of double sided violence, the Baha'I faith is drenched in controversy entailing the methods of expansion, mainly on the explicit accounts of persuasion which, not to be singled out, moderately imitate the same protocols of most of the preceding world faiths. In the persistent era of persecution, the formidable allies and colorless enemies declare to do the work of gods, evident by the actions partaken in. The curious detail of submission to the Davidic King in a worldly government obviously brings up the standard questions of world control. Whatever the case of intention, the ultimate cultural diversity existing under any umbrella of universal love is said to be here, under the breath of this faith. The stance of peace and non-violence is said to be reflected in the ushering of a New Jerusalem. The stance on anything different, besides for true peace and equality, would lay a foundation for another land of deceit to build upon.

Symbol: Nine-pointed star

## Passing Through

Love is a common word used and not often completely meant. In the world of mythology and legend, the essence becomes thinned because of impersonal attachment. The notes of song range from the most exquisite to the most cherished and by real terms or not of the implied mystical lands, farming seeds of spiritual brilliance will continue to be a motivating force for any conscious being yearning to further their own progression. In the heart of all things exists the prime blinding force of the unnamed unconditional strength in its ultimate form, resembling the power of a true kind of love which is far beyond the definitions associated with the attachments adhering to the word. Abiding to no calling, yet permeating unapologetically through the pores of massive structures and minor structures in everything, it is maintained as the most simple of purity thus making the dormancy of this unbiased and unnamed love energy the most potentially active driving force in all things. It is more than insulting to condone the damnation of any fate on any soul. Ironically, fire is the fuel for ongoing spiritual hate crimes. In comparison, the frequencies in which love holds true would be an interesting grid to view. Here is an alternative guess continued.

In the moment of passing though, transmigrating from one life into the unknown, the frequencies of states of consciousness will transform dramatically. You will be fully acknowledgeable about all of the circles of your life, every single moment in fine clarified detail. Truth will be bestowed upon you so you will understand the essence of your intention, ultimately judging yourself with an unbiased and honest perspective. Although different for different cases of course, the attachments you hold on to will direct the placement of your location.

Loved ones, loved things, will inevitably be in the house of memory. The house of memory will extend itself and will be shared with the links you can adhere to. All like attachments of a prior life can possibly conjure itself into a new realm of existence. The connections once made throughout a lifetime will remain in memory as accessible frequency links forever. Just like in dreams, your auto-pilot subconscious mind will come into play, although one can only imagine the fabric would feel much denser and the awareness and cognition would be much more prompt. If you were to rest your mind, you would become nothing, if you generate this energy you do this, if you generate that energy, you do that. You transfer from an old form into a new form. After the transfer you are set again on a new vibrating network of grids and held again by the limits which the mind is bound to.

What you believe in will have the most effect of where you are heading. A mental harmony and disharmony will initially produce different results. In cases of extreme attachment, the spirit consciousness will be trapped into a dwelled upon situation and somewhat physically manifest itself blinking into something like a ghost form waiting unknowingly until a form of resurrection. The spirits who don't let go of prior attachments will also be accompanied by those who have been able to pass through and who are able to show their presence still, like animals speaking and other phenomenal signs abroad. Who is to say what the limit is when the energy we can observe can do miraculous things like transfer through our bodies trillions of times per second, teleport information from one location to another instantly, and pop in and out of existence? This is the place where space and time is in the measurement of synchronized feelings more so than a distance of to and from.

What you allow yourself to be aware of will direct the course of your signature frequency. The range from a single open and closed circuit to a multiple alternating current circuit which is more integral with the whole, to a new kind of circuitry system reminiscent of an invention Nikola Tesla would come up with after his passing, would depend on the thought built unique structure of ourselves. The heart of our spirit is the prime vehicle of transportation, but certain boundaries are likely guarded by conscious entities, planes walking upon the borders of the supernatural, stationed at gateways to open and close portals of existence.

With antimatter, dark energy, and dark matter, the possibilities of dimensional fluctuations for different planes of existence is without a ceiling. Untainted imagination of consciousness will be the most beneficial kind of characteristic to have. If thought is light and light manifests energy, the refraction of your thoughts will shape the grid of your own dimension. This individual crystal palace of thought, surrounded by energy force fields, can have windows still to observe the many places of creation. This house of the infinite, this crystal castle of ones that are zeros and zeros that are ones, is merely speculation. In the event of all possibility anyone has the right as a conscious being to imagine any ideal utopia, regardless of the plausibility of it. Even in the event of finding suicide friends, finding the single frequency string in the universal ball of yarn will be a new adventure for the experience at least. Every single tiny bit is all combined together regardless of the absence of evident electrical signals. Every single one is here and every single one is there, every single one is everywhere. The lines of the Infinite will manifest itself based on the operator.

Circles seen multiplied by the circles unseen divided by the interference of such somewhat sums up what can be bound within an afterlife population. Love is the binding force of-course. Will you remember the person you never met and be able to recognize them in another realm? Will you ever know them? Do you even want to? So how far is the apple going to fall from the tree when separation exists perpetually? Unknown aspects of eternity in infinite distinctions arise and yet, all suffering and all joy comprises the caring adept. How can a true heaven exist with mass calamity at its wits? Optimistically pessimistic as I seem to be finding more ground searching downward underground instead of imploring a false sense of contentment with sky attachments. Thinking about taking a detour from the delusional realms of wants and dreams, those exaggerated by the lies of super imposed beliefs, but then again I could say the same thing twice and mean it with the complete and opposite advice. Anti-potentiality in the rarest, but too common to say, listen to the silent heart when the deafening solar waves comes to bay. Just sitting here, thinking about taking a detour from the constructed realms of wants and dreams, those reinforced by the facts of what is to be non-believed.

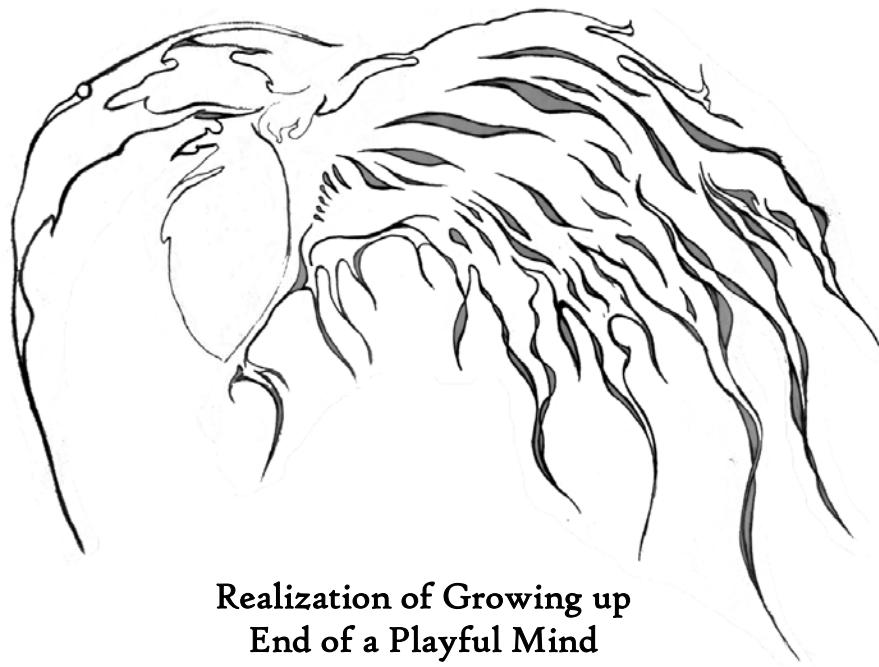

Symbol: Mystic windmill

### *Phoenix Stars*

*The spinning of windmills continues in the planes of the infinite. When amounting the possible with the real and the unexplained with the speculated, the different varieties will stretch far and wide while relating to all other components of an integrated whole. If the minuscule causes of butterfly wings stir effects across the world what difference would the flap of phoenix wings make and how many dimensions would transpire in their wake?*

## **Realization of Growing up End of a Playful Mind**

Unfulfilling this time of hesitation  
In need of living photos of celebration

The real world took the carelessness away  
Quickly the innocence began to dramatically fade

Absent becomes the child who used to skillfully play  
Who formed dreams into realities every single day

The pure and fresh collection of whispers  
Shaping mud and sand into neutral figures

A talent of talents now to acquire no longer  
Changing the priority of what to conquer

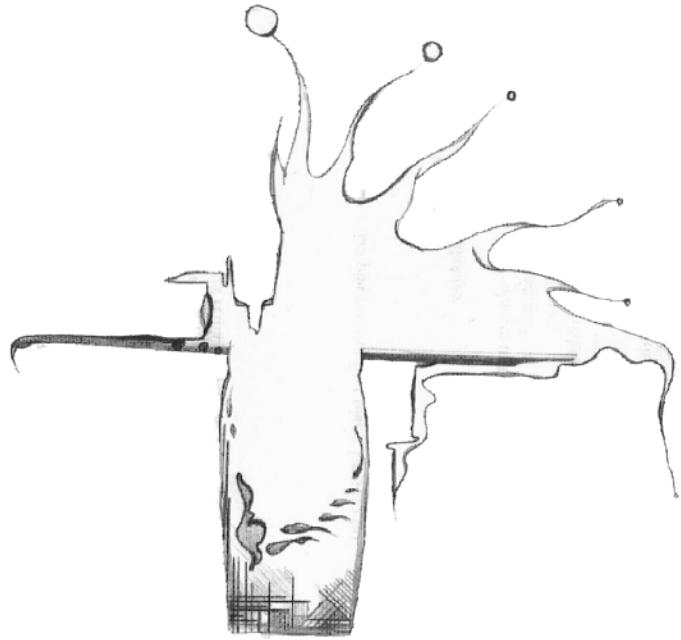

Feeding a system of self-esteem for security  
Slaying the way with a self defeating psyche

Doing just as told, swiftly growing old  
Bartering a soul to be sold for gold

Absorbed in the dreams of a thrones seat  
Yet visionless to features of autonomy

Frozen in the fire intended to make cower  
Begging for the mercy of a higher power

Waiting to say what is just a little too late  
Straying away for an experiment of fate

## Missing chapters

Looking at the stir of all the ancient parts of the world brings up many paradoxical mysteries which can easily humble the modern man enthusiast. Certain studies are not spoken of in school, presumed as a sigh of relief for any teachers who heartily follow the standardized curriculum. Along with teachers, the television will not speak of certain things, newspapers will not speak of certain things, magazines will not speak of certain things, religious representatives will not speak of certain things, politicians will not speak of certain things, governments will not speak of certain things, parents will not speak of certain things, and friends will not speak of certain things. These things unsaid are far and few between the curriculums of everyday life.

History is muddled with missing pages, so what is an inquisitive person to say and do? With the tremendous amount of anomalies evidently existing on this planet, a completely far fetched and insanely bizarre account of true history wouldn't necessarily sound so surprising. Human ingenuity is very capable of doing seemingly inhuman and incapable feats, but submitting to the belief that civilizations sprang out of a primitive status to an advanced status in a non gradual manner proves to be an expensive loan of thought. The projected possibilities for whatever answers exist behind the doors of truth appear to be many. Full descriptions would require the authority in which to speak about them. Since I am no historian, my extent of knowledge is limited. Here you will find some of these mysteries lost which might start to describe the possibilities of the missing chapters of world history.

Revisiting Sumer starts a new curriculum many times over. The stories of an ancient civilization have been recorded on rare clay tablets, but are blurred before decipherment. Hundreds of thousands of cuneiform clay tablets and fragments have been found in archeological excavation sites in the Sumer area including present day Iraq. Most of the documented materials excavated are the economic records of the many factions of the ancient civilization, while only a small portion tells the tales of ancient kings and deities. The wide-spread acknowledged theories of the first recorded mythologies of the world open a very interesting door. One important observation should be kept in mind when indulging in the field of the suggested first writers of language is how these clay tablets are preserved as accurate as when they were created and represent direct accounts, not translated or carried down in generations of song. Strikingly similar events, like an earth destroying flood, are first told here. Translators continue to unravel the secrets of these tablets and remarkable stories have been formed. As an art form of possibility instead of a rigid belief system, the legacy of these myths should be accredited in the very least because of the wealthy amount of rich information available about them which is still in itself a very incomplete picture.

The following summary is another estimated guess.

## Unnatural genesis

In a very intergalactic sense, advanced organisms became star cruisers who harvested planets. These advanced organisms are said to be from the planet Nibiru and are referred to as the Anunnaki. This alien species is said to be reptilian in nature, with many different levels of its own hierarchy. The diversity of the species could be sub divided into multiple different categories and would parallel other kinds of alien species.

Once the Earth became within their range of observation, Earth became a destination for habitation. The world as a Petri dish then came to be. The Anunnaki came in lavish mother ships which held smaller space crafts within. The Earth harbored livable conditions as waves of Anunnaki came thereafter. A number of buildings are said to have been constructed in the southern Mesopotamia areas including spaceports, operations control centers, and metallurgy foundries. The harvested products were transported around Africa in crafts and after the products were refined as needed, crafts would then ship the finished material into orbit. Traveling flying craft would then ship and receive as they passed back and forth from the Earth on their space highways.

Alalu was the King of Nibiru during the occupation of Earth, but his son Anu (An) dethroned him, taking his place as the most high. Alalu castrated his son Anu with his teeth during their final grappling match. Afterward the fight, Anu (An) doomed his father Alalu to the planet Mars, where he would ultimately die slowly from swallowing Anu's poisonous phallus (the face on Mars is said to be Alalu's). Anu (An) then reigned as King on Nibiru as he sent his children to be the watchers over Earth. The sons En (Enlil) and Ea (Enki), and his daughter Ninhursag (Nin), played their roles as the Anunnaki elite leaders. Enlil was to be lord of the Earth, in full control of mining operations and working labor. Ea (Enki) was the chief scientist who oversaw the production of the genetic operations with Ninhursag (Nin) being his consort.

The working Anunnaki protested to mining and went on strike, refusing to do the tedious manual labor. The technologically advanced Anunnaki then decided to genetically create a slave race to do their bidding instead. They transformed the big-footed primitive ape-man into the more cognitive minded human. Adamu became the first engineered human being in the land of Edin followed by many more. Eating DNA enriched fruit and pondering their existence was the new will of the way. Humans proliferated in procreation and cognitive creativity during this time which they were ordered as slaves by their non-human masters. En (Enlil) drove them out of Edin and Ea (Enki) encouraged their desire to be curious.

During the course of Earthly immigration, the Anunnaki bred with the human females. Appalled by the end result abominations, En (Enlil) was enraged at the interbreeding of masters and slaves. Ea (Enki) and Ninhursag (Nin) had quite an opposing opinion as they began to put into place human leaders for the harvesting operations. These leaders were required to be half breeds of course, that is part Anunnaki and part human. En (Enlil) became increasingly angered by the new found freedoms these abominations were receiving and began the implementation for their entire extermination.

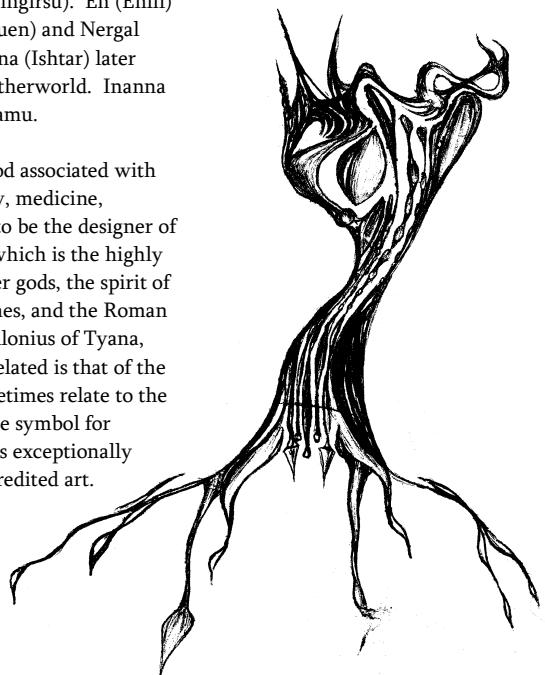

En (Enlil) had every bit of knowledge to understand what would happen when the planet Nibiru would pass next to Earth. He knew the gravitational pull of the planet would bring upon an Earth changing tremendous flood. During a meeting of the Anunnaki Elite counsel, En (Enlil) made the counsel swear not to inform humankind of the upcoming catastrophic upheaval. Ea (Enki) had other plans however, as he purposely sabotaged his half-brother's plans. He told and directed a human by the name of Utnapishtim to build a structurally sound boat to withstand the power of the great deluge while keeping the genetic information of as many forms of life as possible.

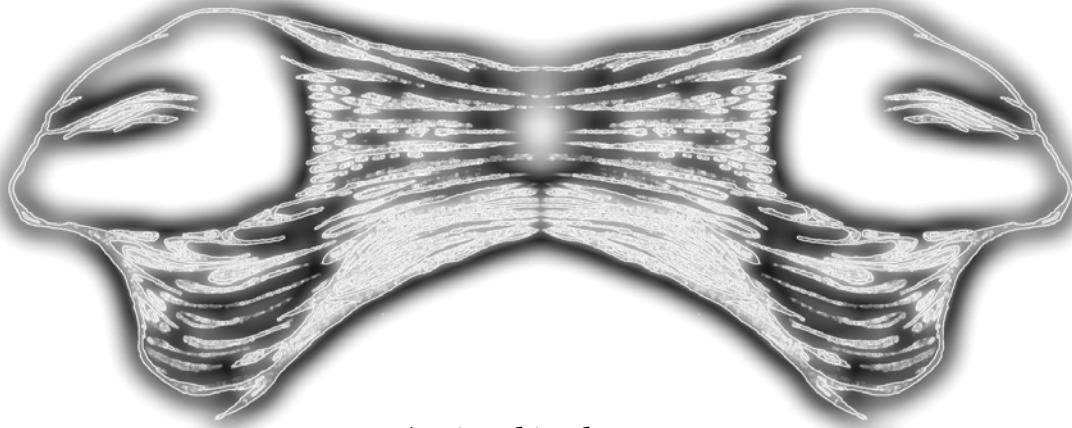

Once En (Enlil) learned of the surviving human being and company, lines were drawn within the Anunnaki family tree even more than before. The genocide of ancient cities became the nuclear result of a quarrel between these two half-brothers. En (Enlil) was a jealous god of the intelligence of humans and not just of their sinfulness. This radioactive chain reaction led to the destruction of the Sumerian civilization as the two half-brothers seemed to be less than reluctant to take a back seat in the lost records of history.

The first born of Ea (Enki) and his wife Damkina is Marduk, god of the Babylonians. Ea (Enki) was also wed to his half-sister Ninhursag (Nin).

En (Enlil) was also married to Ninhursag (Nin) and they produced a son by the name of Ninurta (Ningirsu). En (Enlil) had another wife by the name of Ninlil (Sud) and with her had two sons by the names of Nanna (Suen) and Nergal (Meslamtaea). Nanna (Suen) was married to Ningal, and were the parents of Inanna (Isthar). Inanna (Ishtar) later married Damuzi (Tammuz). Nergal (Meslamtaea) was married to Eresh Kigal, the Queen of the netherworld. Inanna (Ishtar) had a sister by the same parents who is the mother of Lilith, the first purported wife of Adamu.

The Anunnaki deity Ningishzidda is said to be the counterpart of Thoth, the legendary Egyptian god associated with the moon, writing, speech, language, numbers, the arts, learning, measurement, science, astronomy, medicine, wisdom, and magic. As a son to Enki and Eresh Kigal, the younger half-brother of Marduk is said to be the designer of the pyramids, the author of the Egyptian Book of the Dead, and the author of the Emerald Tablet which is the highly venerated treasure of alchemists. An anomaly of a god due to the high status-quo amongst the elder gods, the spirit of Thoth is said to be reincarnated in many parts of the world. Imhotep, Akhenaten, the Greek Hermes, and the Roman Mercury are said to be doppelgangers along with the Judeo-Christian Enoch, the Arabic Idris, Apollonius of Tyana, and the South American Feathered Serpent, Quetzalcoatl / Kukulcan. The symbol most often correlated is that of the caduceus, the winged rod between two intertwining snakes which then goes down the line to sometimes relate to the myth of Ophiuchus, the serpent bearer, who is also known as Asclepius, son of Apollo, although the symbol for Asclepius is a staff encircled by one snake instead. The mystery surrounding Thoth and company is exceptionally elusive especially when trying to pin point the numerous incarnations as well as the associated accredited art. The legend of Hermes Trismegistus ('Thrice Great') beckons for further inquiry.

## Ancient kingdoms

When thinking of world mythology, many cultures from across the globe tend to share oddly similar subjects and drastically different themes. The pantheons of celestial families, as described through translation and decipherment, show signs of extremely rich characteristics authored by the recorders of the times. The evidence for history, compiled on Earth, is the salvaged and preserved knowledge which has avoided destruction from the past. The amount available is sufficient for the thirst of any scholar and although the holes and gaps may not be completely filled in with prevalent facts, walking along the edges of belief can provide more than enough amazement to capture the imagination for a lifetime. The studies of world mythologies are as prolific as they are porous. Populated circles would represent these kingdoms of time's past and each would offer a multitude of inquisition. The Egyptian pantheon, along with the Roman, Greek Celtic, Nordic, the Native American beliefs, Southern American beliefs, Australian aborigine beliefs, African native beliefs, Asian / Middle Eastern beliefs, and all others would compile together to serve as a very lengthy study.

Each of these notables deserves a more in depth and comprehensive study than what is offered here. In order to help box in a wide range of possibilities with odd corner pieces, these brief descriptions are only meant to mention a few of the anomalies which can be accounted for.

Emerald Tablet- By the fingertips of Thoth, this creation of legend is said to contain the base instructions on how to transform reality and substance.  
Popul Vuh- The lost record of the mythological creation story of the Maya, retranslated through European interpretations and by native oral tradition.  
Crystal Skulls- Disputably enigmatic skull shaped crystals of unknown origins each which offer a plethora of distinctive mystical properties.  
Star Child Skull- The cherry of Lloyd Pye's eyes, this controversial skull stands to represent factual evidence of non-human DNA.  
Aztec Calendar Stone- About 12 foot in diameter, about 25 tons, and carved out of basalt rock, this stone contains two calendars in one (the agricultural 365 day Xiuhpohualli and the sacred 260 day Tonalpohualli) and proves a level of sophisticated knowledge of astronomy, art, and science.  
Antihydra mechanism- An intricately designed astronomical and mechanical device recovered and dated to a time which it should not exist.  
Piri Reis Map- Depicting territories which do not align with the era, this map details information which is said to not have been known at the time.  
Fuente Magna- A Bolivian bowl, said to depict Sumerian text, assists the notion of unrecorded transoceanic migrations of the ancient world.

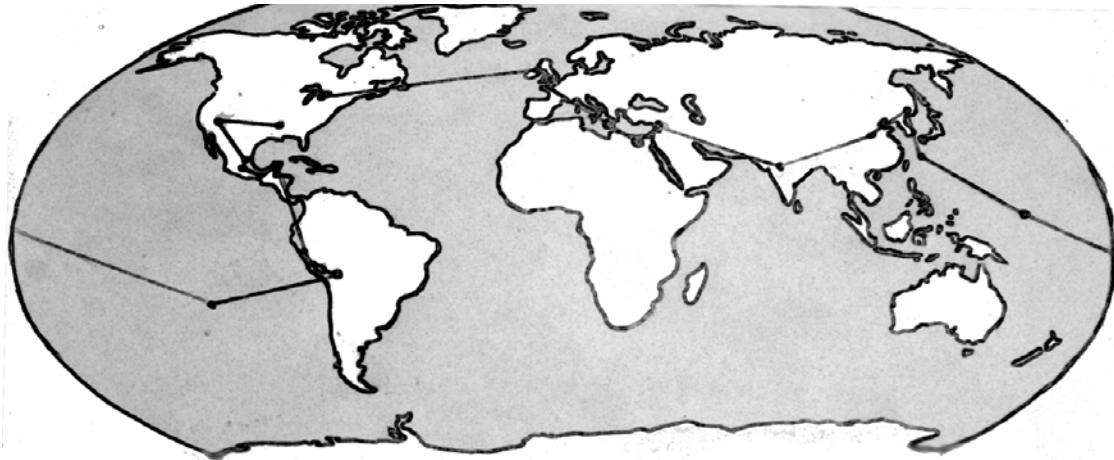

The Klerksdorp Spheres, the Dropa Stones, the Ica Stones, the spherical stone balls of Costa Rica, the pre-Columbian gold plane figurines, the Saqqara bird, the Baghdad Battery, the Tecaxic-Calixtlahuaca Head, the Maine penny, the Aluminum Wedge of Aiud, and all of the unearthed anomalous objects of unconventional fame should all be regarded to the same investigative research approach without the preconceived notions of their false pretenses. What will become of the conclusions should be opted to fill in the truth of the unknown and not so much of the truth which is already made. Constructive skepticism aside, the automatic dismissal of such objects is premature and despite the charm of any formidable hoaxes, the future of documented history will rely on what is shared and known between the accepted evidential facts and the agreed upon credible opinions of the past and current participants.

What if a random sequence of events has continually stacked to a point to where everything is seamlessly coupled together in a developing space-time-consciousness continuum which maintains an even balance of chaos and order? A continual carried sequence would persist and defining the truth would be like defining a perspective towards an abstract painting, an abstract painting that could barely be judged based on the account of its informality. Being here by accident and nothing more is just as possible as...

...the evolution of dinosaurs which would have eventually progressed into reptilian humanoid looking creatures, developing knowledge over millions of years, and advancing to a point of becoming space travelers and time travelers. Controlling super sophisticated technology, exceeding what science fiction has yet to describe, these domestic beings would be maintaining a somewhat controlled experiment of our planet Earth with all of our genetically modified population. This step by step unnatural selection is just as possible as...

...the evolution of mammals who made their own way with an explosion of mental capabilities, reaching peak potential from the beginnings of the first unrecorded civilizations and then slowly, over the course of time, encouraged themselves to evolve out of a cage of limited consciousness. Free as our own vision can create, our perspectives remain the most important aspect of us. The survival of the smartest and fittest as seen fit by the same kind of mindsets who created the definitions of each in the first place, is just as possible as...

...the evolution of supernatural gods who picked up the need for ranks, battling amongst themselves and often conspiring together from the fused doctrines of shared dimensions to suppress select populations in the chosen possible ways for whichever reason. With a different type of gravity and different kinds of physics, the oppressed bottled up essence would eventually be discharged through the shared crown of the energy restricted spheres over the course of an unknown time due to an eternal universal law of balance.

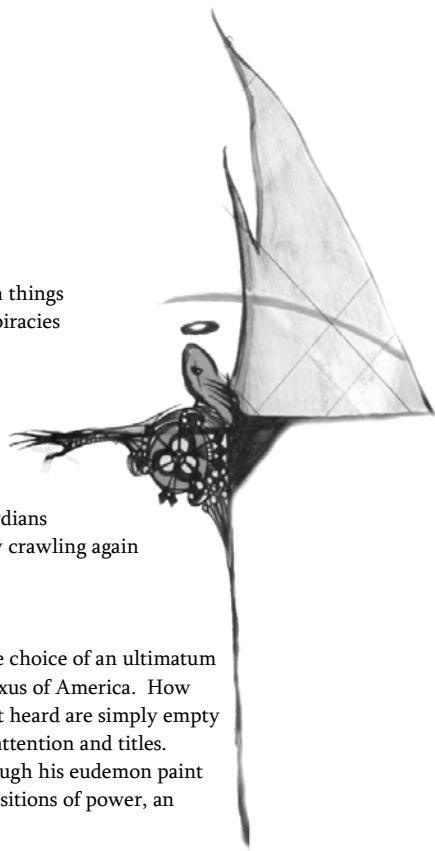

### Ancient humans

Being able to fly to the archeological sites of the ancient world would open up a lot of observational points of view. There they would be, standing and lying as enduring behemoths, the monolithic structures would speak tremendously loud simply with their presence. Appreciating the sheer magnitude of these sites, which words can hardly depict, and observing the details of every crack and cranny would be a very fulfilling dream. Flying around with complete access to all the world has to offer would instantly instill feelings which would be incredibly difficult to match. Traveling from one spot to the next, in these one of a kind instances happening right after another, would leave a trail of bewilderment and astonishment. Hard to imagine how that could feel and then only to think about more what ifs, like what if lungs could breath underwater and what if bodies were tolerant to the deep ocean water pressure? We would probably need a flashlight or better yet just become the flashlight ourselves, a bioluminescent creature which could visit wherever is chosen, whether that be in the air, land, water, underground, or space. In the instance of being inside of our remote viewing bodies and sharing our perspectives of these ancient sites, there would be a lot left to be said.

If time were to pause, the first stop would be atop Monk's Mound in Cahokia, Illinois just to imagine the faces of the prior inhabitants, the Mississippians. Next on the tour would be to investigate the legitimacy of the City of the Grand Canyon in Arizona. The trip to Teotihuacan, Mexico would offer a plentiful amount of splendor including cruising the Avenue of the Dead where the Pyramid of the Moon, the Pyramid of the Sun, and the Temple of the Feathered Serpent, Quetzalcoatl reside. A quick visit to see the Great Pyramid of Cholula in Mexico would immediately be followed by the flight to Tenochtitlan, Mexico in order to hover in and about the ruins of Templo Mayor. Palenque would be suitable before the staggering structures in Tikal, Guatemala. In between the columns of Chichen Itza, one may wonder how many sites of significant magnitude are not designated on this sight seeing excursion. Advancing onward to Caracol, Belize would be after that, just to skim about the tens of thousands of buildings, including the gigantic Caana Pyramid. Gliding past the stone formations of Marcahuasi and gazing upon the ruins inspires the voyage even further to look down on the Nazca Lines of Peru properly from above. The remnants of the late unfinished fortress in Ollantaytambo, Peru sit still as the area of Cusco award so very much. The peak of the mountain of Huayna Picchu would prove an eagle eye view of the stupendous nature of Macchu Picchu, Peru. Taking in the smooth lines leaves one to scratch their remote heads on just how ancient people were capable of putting together these huge 3-D jig saw puzzles. The following prime example for a concrete jig saw puzzle stays intact at the walls of Sacsayhuaman. As the physical tours take place, this parallel out-of-body tour takes a rest inside a cubby hole for a brief intermission at Kenko, Cusco. This opportunity only starts to prepare someone for what is awaiting at Tiwanaku (Teohuanuco), Bolivia. Being greeted by hospitable statues before soaring through the Gate of the Sun gives way to the overwhelming enigma which encases the nearby landscape. Easily rivaling Giza as if they were in competition, together the sites of the Kalasasaya Platform, the Akapana Pyramid, the Subterranean Temple, and Pumapunku stupefy all who proceed to theorize about the means of how this was all formulated and built. Laced with machine precision cuts with edges so sharp that they will cut a phantom limb, the collection of H puzzle pieces and the cubic stone blocks with perfect circular holes compliment the huge rectangular platforms well. One last inhalation before absorbing the essence of Lake Titicaca and our quest continues from the doorway of Aramu Muru over the Pacific Ocean towards the isolated landmass of Easter Island. Surveying the 900 or so surviving Moai figures perplexes the senses when concerning their extremely remote way of life. Jumping, leaping, and then spiraling through clouds towards the nearly 100 artificially designed islands of Pohnpei to visit the very mysterious city of Nan Madol which boasts 250 million tons of stacked basalt rocks each one weighing up to 50 tons. The logical explanation, of course, is giants and wizards. One more round of glimpses underwater at Madolynym and then all the way through the current to the submerged platforms near Yonaguni Island, Japan. Whether a natural formation or a vacation home for the dragon princess of the sea, this juggernaut shape begs for scientific study. Taking lift-off from the center of the odd shape, the new destination of Vladivostok, Russia highlights the under exposed monoliths on Mount Pidan. After brushing the hill-like pyramids here and then to the Chinese-hill like pyramids there, a leisurely stroll of some sections of the Great Wall would only be a small detour before going to feel the radiance of the unbelievable meticulously hand crafted Kailasa Temple in Mumbai, India. Already been mystified altogether, the absurdity of Gobekli Tepe in Turkey lies just ahead. As we swoop in on the artistic edifices, which baffle the editors of the history text books, a question of how many fantastic ancient artists there must have been automatically becomes apparent. Baalbek, Lebanon presents a number of ridiculous obstacles to grind with our phantom limb feet and as we launch off from the Stone of the South we come to arrive at the mouth of the Nile. The ample substance of Egypt stretches farther out including all of the energy power plant pyramids and the masterfully calculated temples. The prestigious ancestral lineage, embraced with art and color, share the cradle of civilization area with the former Mediterranean. These sites are currently not on this tour. Redirecting the path towards the Carnac Stones in Brittany, France, we skip along the unknown blueprints, playing connect the dots by jumping across the tip tops and then persisting to do the same at the vortex of Stonehenge in the United Kingdom. The song and dance carries on where the Callanish Stones are located in Scotland. No damage done and daunting still, we hurdle over the Atlantic Ocean towards Traverse City, Michigan. Hiding in the lake, the questionable stones patiently wait for just a little bit closer evaluation. A sense of urgency summons as we fill in again to our body columns. The hours spent we could barely speak because the whole time was bathed in utter disbelief.

Phantoms of shadow  
 Heavy pressure hollows  
 Tomorrow's given sorrow  
 Lords of sin  
 Begin akin opinions  
 Stating the saying  
 Fright reigns king  
 With eye slits  
 There are,  
 know such things as conspiracies  
 There are no such things  
 as conspiracies  
 Under eye lids  
 The watcher guardians  
 Creepy crawling again

### Anti-opinion matters

My opinion is often said to not even matter because I have not voted for this royal cousin or that royal cousin. The choice of an ultimatum of which criminal hand is best to vote for, the elected left or right hand, is a repeated sucker punch to the solar plexus of America. How many times does any sole opinion matter at all anyways when so many meaningful voices go unheard and the most heard are simply empty voices? Dishonesty is the allowed and accepted standard. Speaking of the process is sure to attract many kinds of attention and titles. Saying anything at all is like saying Salvador Dali was the most reliable voice of reason, communicating solely through his eudemon paint brush. Separating the real from the surreal is nearly impossible and when it comes to the deceptions of those in positions of power, an uncountable amount of riddles present themselves in an ever changing maze of shifting hallways.

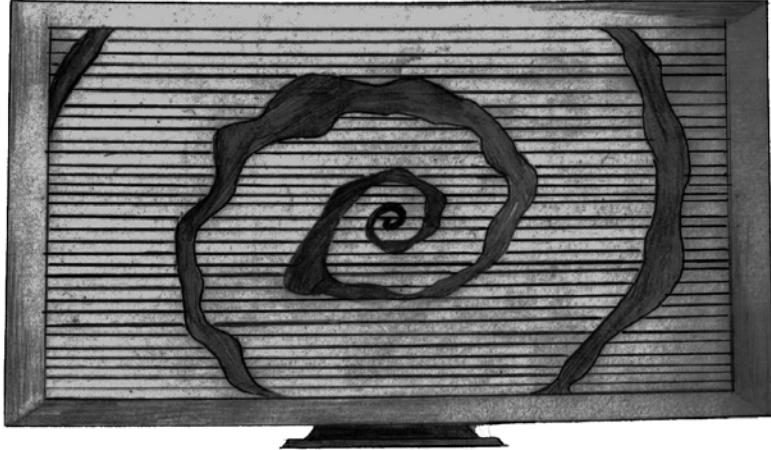

The city of possibility, built out of historical events, seems so complex that giving up on the jig saw puzzle quest is easy to do. The cityscape would be so grand that it would envelop the globe into a spherical metropolis and searching through the dingiest alleyways and the darkest corners would be needed if one is to try to find the truths of the matter. Difficult to say just who is going to do anything when the majority of the population turns blind eyes to ongoing crimes as long as the events do not immediately affect them. If there was hope for help, what steps could we take to truly move forward and far away from the transparent prisons of the world? Would it even be worth trying to salvage? For what it is worth, it is worth a whole lot more.

Each single government is a circle of sub factions. These networked branches and parallel divisions are the circular processes which make the system function, operating from the inside out as well as the outside in. The connections of any governmental circle with any other circle makes the dynamics even more complicated when adding in the descriptions of all the moving parts to the wholes. The flow of money is unfortunately the bloodstream of the world and so many other industries have their functions to move the circulation around as well. Fabricated headlines across the boards are a part of this circulation and can be understood in completely opposite terms. The war on freedom is a progressive actuality as shown with the annihilation of the constitution and civil rights. So when is everything going to hit the fan? From a doomsday perspective, air will hit the fan and disintegrate, in an instant, the fan altogether. From another doomsday perspective, the fan is already being hit over and over but continues mostly unnoticed. Impending as a possible moment, the fearful fate awaits until this real-life movie is directed otherwise and hopefully by an unscripted surprise.

A few types of citizen perspectives:

The one who believes the country is one hundred percent good on all accounts with a notion of how the ends justifying the means.  
 The one who believes the country is united under a god and does away with any view contrary to a select group of thoughts.  
 The one who believes the country is operating the best which can possibly be done by human means.  
 The one who believes the country is taking care of all which is needed for the citizen so no further investigation is needed.  
 The one who believes the country is doing an assortment of different ventures, some good and some bad, and retain an inconclusive opinion.  
 The one who believes the country is vastly complicated and deciding which is correct and which isn't is too difficult to determine.  
 The one who believes the country is hiding secrets indefinitely, but for the good of the whole.  
 The one who believes the country is divided and is also a hostage to the corporate powers at the helm.  
 The one who believes the country is a cul-de-sac of materialism bound to slow degeneration, hopefully wishing for the best.  
 The one who believes the country is used as a vessel to usher in a new world order by hands unknown, but speculated.  
 The one who believes the country is being manipulated by invisible puppet masters who control and operate the worst case scenarios.  
 The one who believes the country is evil by the means of actions like mass murder, assassinations, torture, deception, and the unclassified.  
 The one who believes the country is under non-human influence in which opens the door for even more possibilities.

Set coincidences aside because intentions do gather, ignite, and collide.

### Cutting the strings of puppet masters

Reconstructing the self requires certain acknowledgments of what is going on around us. The growing experience of our life circle is susceptible to being heavily influenced by our immediate environments. The amount of influence absorbed from the culture grown into, the schooling curriculum, the real life curriculum, and peer interaction can all be structured into wheels within wheels throughout a lifetime. Having an honest perspective about the totality of the wheels is critical during any self analysis. If you imagine every moment as a spoke, each wheel turns in intervals and we would age accordingly. The total amount of moments when reading, watching television, being on the computer, reading magazines, listening to the radio, reading newspapers, watching advertisements, listening to music, working, doing hobbies, doing the things we like to do and doing the things we do not like to do, being under the influence of substances and all other assortments of things which can occupy ones time all add to the process of developmental growth. Our surroundings assist us to develop our layered cognitions, but we can choose to override the ailments to our consciousness by simply being aware of the strings which try to direct us.

Just think of the catchy, catchy pop rhyme being digitally sung all the time. Burn the sound into your head and do not question what is being fed. Repeat, repeat, repeat, dance to the beat and gravitate towards the same circles of the elite. The over-cynical population has become the gatekeepers of what is allowed and accepted and if you do not belong to the normalcy in most cases, the expected place of your residence will be outside of the welcomed community. These overly saturated communities of thought, relying on dual aspects of separation, exist as a growing epidemic among the majority of minds. Not all are like this and not all are aimed like this. There are those still, who are awake from the hypnosis and there are still those who want to wake up from the slumber of illusions. We are all brainwashed in so many different categories of our lives whether we choose to admit it or not, but we are all capable of negating the influences which try to force themselves upon us to a minimal.

A daily life of a fictional character:

The early appointment to get his annual mercury filled vaccination left him feeling kind of groggy this morning. After getting home, he gets some cold fluoridated tap water, and sits in a stupor watching the latest social conditioning reality show. Getting up to browse the pantry of altered food, made by brand names of childhood trust, a bright bag ends up being the most convenient. Snacking on some monosodium glutamate potato chips, he then decides the water isn't quenching his thirst. He grabs the last remaining soda pop which unfortunately just happens to be an aspartame filled diet. Sitting back down to have the American dream rubbed in his face, depression creeps in. Sleep seems more suitable to rest the excessively desire filled mind. After the nap, the suicide inducing depression medication is scheduled for intake. The chemical imbalance stirs as he exits his unaffordable apartment and climbs into his very large unpractical vehicle. He rages on the road at any new opportunity while the radio plays the latest trendy chorus on a repeated loop. With jets flying in the sky above him, leaving trails of questionable chemicals, the electrical transmission of all of the surrounding frequencies bounces in and out of his vehicle. After parking, he walks into a typical gas station. He wonders which chemical cocktail to grab out of the smorgasbord of neon colored beverages. Instead he grabs a water bottle which is infused with tiny increments of estrogen due to the plastic. Cigarettes are next on the list with their many inviting ingredients and while up at the counter, he thinks he might as well buy some liquor. Realizing his hunger again, his next stop is to get some fast food. He savors the feeling while eating the neuro-pleasing chemically enhanced meat, filled with growth hormones left over from when the cow had been injected by them. Obesity and diabetics is well on his radar, but dismissed due to the need to feed his own self gratification. The process of how the meat is processed is the furthest from his mind while the product settles into his stomach. While heading home his insecurities flare up for a number of different ego-driven reasons. He pulls up next to a stereotype he is built not to like and finds as many negative things about them as he can in order to make himself feel better about himself. With a sigh, the light turns green and he continues on his path whispering cowardly things under his breath. The resentment of an imaginary reason subsides as he pulls into the parking lot. Back at his home, alone and sour, he watches a glorified gold plated movie, promoting the usual standard of the good guy versus the bad guy. Indulging in the thoughts of acceptance and without reluctance, the liquor is opened to drown out the sorrows of the life unlived.

Evidence can be found where evidence is looked. Whichever is true and false, minimizing unnecessary consumptions of any kind is kind of an important matter to those affected. Allowing the continuation of sneaky business is illogical for the progression of humanity as a whole. Being aware of the poisons of life can make a huge difference in our aimed directions. Our bodies are our own and what we decide to put in them should always remain our own choice. The mass acknowledgment of mental and physical manipulation should be at the top of the human priority list.

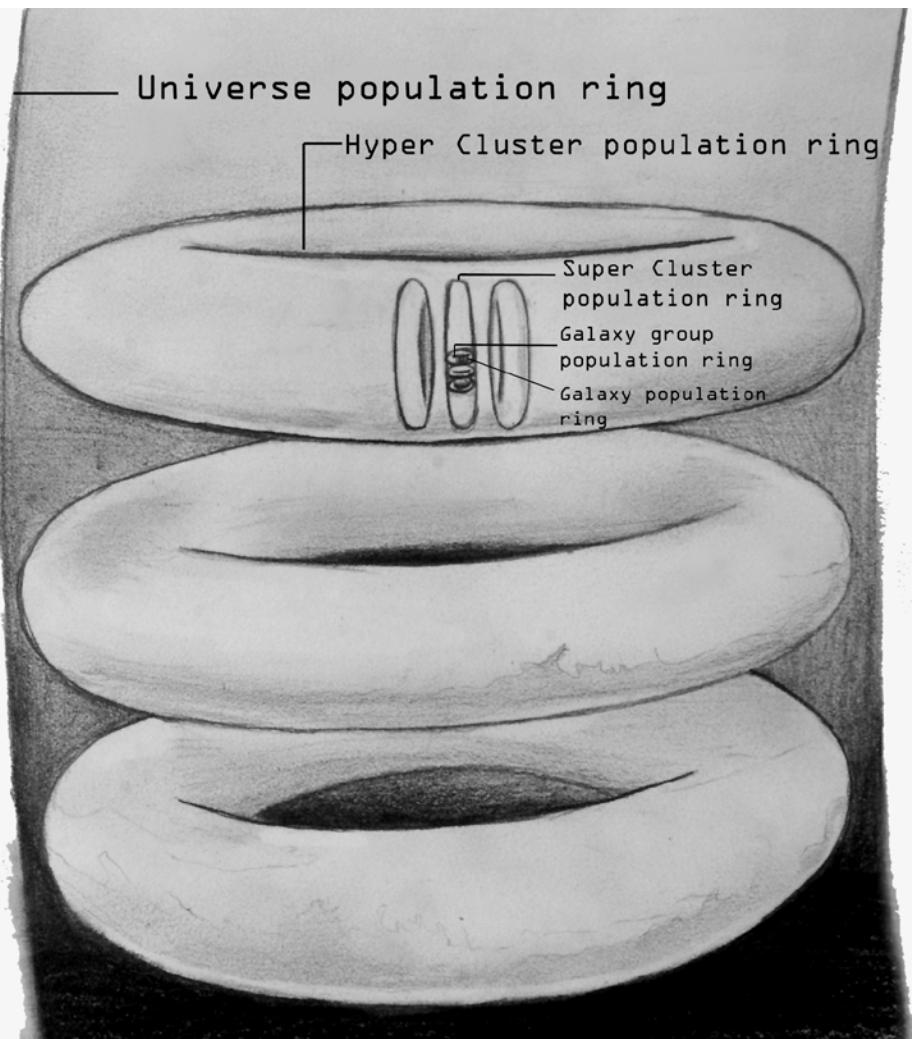

## Galactic initiation

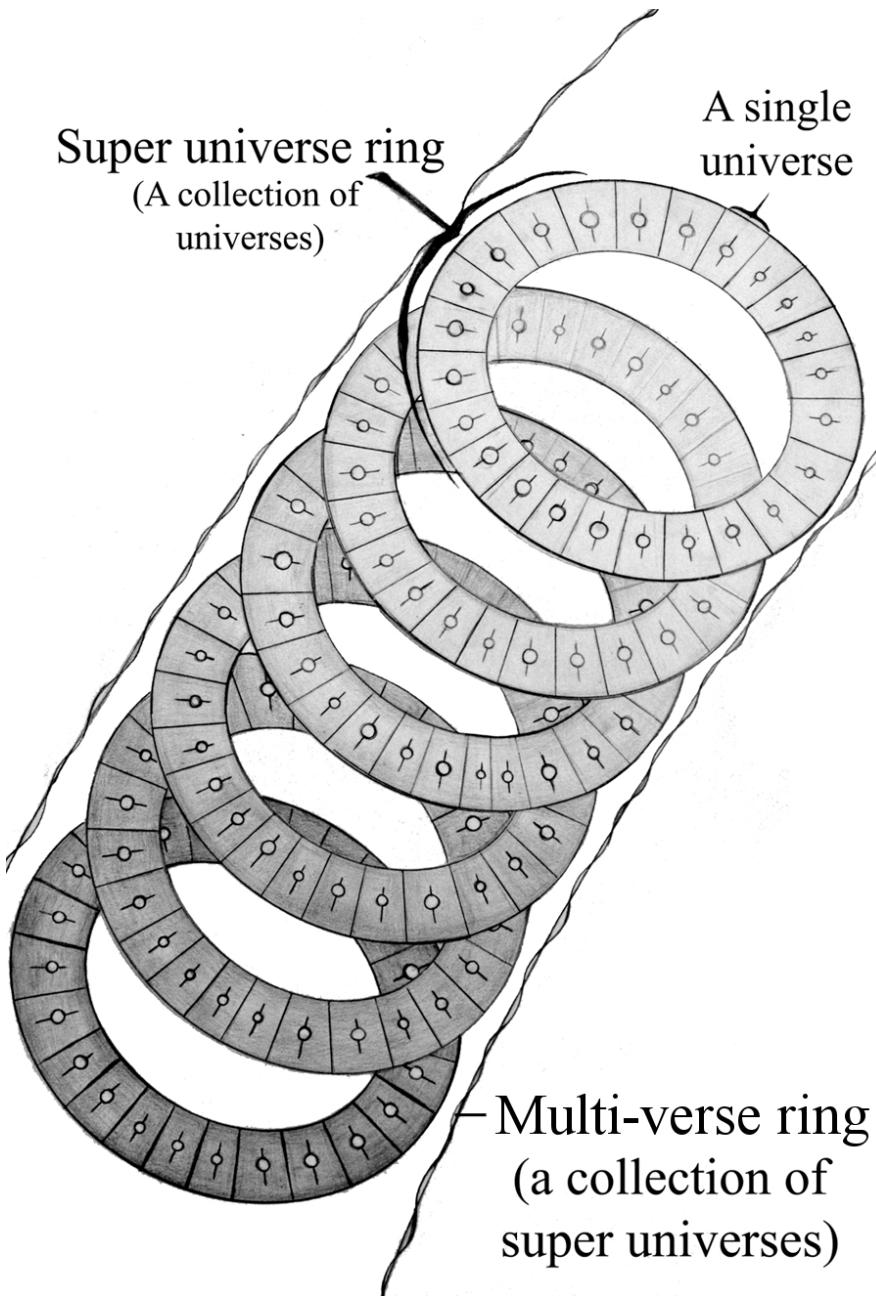

Whether practical or not, being perceptive to possibilities of the scales of consciousness in outer space are simply concepts to visualize. Preparing to balance unknown locations with the basic equality premise of *oneiszero* is a choice. Who is to say what lies outside the box and who is to judge those which travel outside of the box to investigate? The reach of mental comprehension is worth the stretch. The wheels of eternity are able to show what could exist by placing alternating alien circles on many kinds of levels. The mass collection of circles would go to show the non-documented alien biology, alien communities, alien ways of life, alien technologies, and alien religions. Each circle with each belief would be divided in a ring of rings and might also be completely unaware of each other. Although true classifications cannot be placed until the proper knowledge is attained, presuming what could exist is an amusing exercise. The use of imagination, as a standard tool for learning, goes a long way when trying to fill in any of the unknown circles.

When regarding life support systems on this planet, life forms called 'extremophiles' stick out from the crowd and present a significant measure in study. These types of organisms are not only able to live on the harshest conditions of the Earth, but thrive and prosper as well. Extreme environments, ranging from below freezing temperatures to above magma surfaces and to environments completely void of light are considered the normal. This much is evidently true and when taking into account the number of observable stars, life on other planets is not too unbelievable when bringing everything into perspective. If nucleic acids can be substituted by other chemicals such as arsenic, to maintain an organism's life system, the plethora of possibilities for life is even more limitless.

The variety of intelligence from single cells to galactic federations could be just the start. The number of opportunities for possibility to reproduce is an artist's dream, one which is becoming unconventionally more and more backed up by a growing number of sciences. Lines of reality are continually sketched, but when speaking of what could exist, all that can be dreamt up is real in the sense of being thought manifested ideas. Along with these other extra-planetary organisms in the universe, extra-dimensional organisms and entities join the crowd and should be mentioned. The types of possible non-human consciousness are without an end. Ghosts, angels, demons, light beings, orb entities, shadow creatures, humanoids, reptilians, greys, insectoids, biological machines, an assortment of animal-type people, stick figure people, animate inanimate objects, and other unexplained creatures are all as equally likely possible when taking into account how much we don't really know about the paranormal, supernatural, and mystical fields of the energy world.

Drawing the line of what is real and what is non-real is unnecessary. For most, just having an idea of such absurd things is close enough. Swimming in the idea of a universal population could maybe only start to prepare the mindset of the human population for becoming co-habitable with other star systems. Would skin color be less regarded in exchange instead for the difference in skin texture, like types of scales and other chemical compositions? *Oneiszero* acts as a bridge still to initiate universal togetherness between all parties. When concerning other possible life forms, our human role of importance in this universe is sure to come into question. Initiating a state of equal union between two completely foreign communities with the understanding of mature mutualism would be the ideal shared dream. Who is really who and where is really where? Will only evidence make someone really care? It is not just a question of if there are, but instead what is so bizarre about endless stars?

### Dimension kingdoms

These levels of wheels stand to represent possibility multiplied by possibility to the possible power. The purpose is many and the reason why is to visualize all traces of existence into circular patterns to prepare for equalizing the harmonious unknown.

Think of this universe as a ring from birth to death, only a single ring comprised of all of its groupings of ones and zeros within. All the prior mentioned levels are involved into that single ring which is alongside other conjoining universes, each one also a singular ring with an individual universe history. Universes set side by side would be parallel in respect to the number of them held together in a larger grouping. An additional larger ring to hold all composite rings within (universe rings) is the repeated pattern. An adequate term for this larger ring, level 14, would be a super universe. In addition, a super universe would then repeat the pattern as being a single ring, alongside other super universe rings, each one composed of the levels within. A similar ring structure of super universe rings would lead to the assumption of even a larger ring holding all of the super universe rings. An adequate term for level 15 would be something like a multi-verse (comprised of super universe rings), as a level 16 could be called something like a meta-verse (comprised of multi-verse rings). Each level would show similar traits of smaller parts such as the measurements of time and each would be as diverse as the number of different structures of life forms there are. The names of these higher levels are not absolute and this concept is just to indicate what could possibly exist outside of the observational view.

The stories would tell the tales of the gods of gods of gods, all reaching for the state of the prime mobile, or the biggest sphere. As large or as small as possibility grants, all traces of experience can be filled and organized into these shared circles of wheels within wheels, from the real to the non-real. If every circle is a compiled number of ones and zeros, every wheel would somehow be both a microcosm and macrocosm to an undetermined master set of codes and one equals zero will stand as the simplified version of any universal formula presented. This would conclude to say how going in either direction, large or small within these circles, would cycle through itself eternally, yet still be compartmentalized in facets of types of matter, types of time, and types of consciousness.

'Wheels within wheels within wheels ad infinitum' is a phrase to initiate the *oneiszero* sequence. Peaceful resolution is the only means for progress on a breaking shell. Although I am not able to speak in any other voice besides my own, *oneiszero* is meant to welcome all forms. The wheels of eternity are meant to span on all planes of existence as well as all the star systems and undefined systems. All shapes, all sizes, all colors, all anomalies with mutual progressive intentions are welcomed. The unification of all circles depends on how many 'all' circles one means. All means any and there are so many unknown things which would have to be included. When trying to imagine the infinite oceans of universes and dimensions, our unfettered dreams are the closest portrayals we have when pondering what exists beyond human limitations.

## Dream kingdoms

The mindscape of an individual ignites most vividly during the dream states of sleep. Dreams are largely inconclusive because these virtual reality by-products are difficult to study. As natural as breathing, dreams are the ultimate fascination of consciousness where alternate dimensions are undeniable. How many answers would exist in the realms of the forgotten, those passed over with the opening of the eyes and how many would exist with the realms of the remembered, with those unforgettable frozen moments?

The sensory experiences of sight, taste, touch, sound, and smell, make up what is concretely real as first-hand experience is the most logical proof. If the subconscious mind is our personal dream dimension, the unconscious mind would be the backdrop to the ultimate diversity between thinking minds. This ultra large palette of possibility is more so when thinking the landscapes are not solely generated from a single person's ideation, but from a collection of all of the frequencies in a jointly conscious atmosphere.

Depending on the mindset which transfers into the dream state, the hopes, the fears, the light heartedness, the grudges, the comforts, and the isolations will all calculate different simulations. Whatever is heavy on the mind will also be present in dreams. Since symbols generate attached archetypes collectively, common associations have been described by many to represent what certain visions may mean. Always with exception, ones can be zeros as symbols can be unique as well to the individual's creative perception.

The individual's realm of possibility plays a significant factor into the angles of dreams. Nightmares are the result of uncontrollable things and the deepest sense of un-wanting. The experiences are true to everyone involved with those simulations. If we generate dreams based on our own understanding we will limit our potential with the reach of our mentality. The nightmare construct logically begs the question for an opposite construct, the scales of which are unnamed. The word 'skymare' would suit the title of an ultra-blissful dream more so than day dreams. Being aware of the initial idea of the opposite of a nightmare is only the start to actually having one. A skymare is meant to be regarded as the most epic of energy simulation during sleep.

The definition of a skymare would include an example which would state an energy ball spanning many fields of vision, a brilliant orange blindingly luminous in the center, exploring and growing even more vibrant orange outwards, transferring all of the pulsing energy into the observer. Other colors would include an icy blue orb, creating icy life and burning bliss into souls. Any color, even the color of clear, would be a candidate for these energy filled orbs.

-Nightmare-----Dream-----Skymare-

Purposely walking into the dangers of our individual phobias and letting go of everything with a self-willed influenced will ultimately end nightmares. Types of negative energy make themselves available to view as their flow stems from whichever source it derives from. As protection, the lucid dreamer can aim to be automatically aware of the balance of *oneiszero*, even in the dream state. Submitting to the moment of being frozen in fear can be resisted depending on our mental abilities. Having to rely on the inevitability of waking up from a dream doesn't necessarily have to be the case when subjected to the ever shifting mental projections of ourselves. Although the reservation of waking up is comforting, some valuable knowledge can only be found in the depths. The circuitry of the holographic dream realm of the unknown remains a huge mystery and has plenty of room for discussion. Abilities ranging from breathing underwater, immunity to pain, super speed, jumping really high, flying, telepathy, telekinesis, planes walking, shape shifting, de-materializing and re-materializing, time traveling, and immortality are only a few included which defy the laws of reality. The ranges of dreams are extensive and the unique properties for individual constructs are exceptional for each one of us. Dreams are often difficult to remember, but here are some glimpses at a few very select ones.

...And upon the persistence of a certain porcelain-faced horror icon, the repeated question became to be, of pushing the red button on the handheld black box. The setting of night crept in, in lonely neighborhoods, while my perception was awed by this teasing red button. Obvious ramifications unneeded to be said, the inevitable curiosity got the best of me over and over as I awoke in the same dream after I was hunted and killed again and again. Traumatized still by the teleportation adventures of a blank-minded serial killer who randomly showed up in odd ways in foreign streets, I was not deterred by defeat. The ways I died were many and ways included were being stabbed, choked, pummeled, impaled, electrocuted, decapitated, and ripped from the torso. Until the time awoken, the times of pushing the same red button...

... And upon reoccurring memories of a dreaded symphony, the same porcelain faced anomaly knocked on the door, as I could tell from the basement-level apartment peephole, interrupting the merry household from playing on a game board. As a deep breath was focused, the chain became undone and the bolt became unlocked. Without judgment, the non-violence which followed was not a shock. We shook hands in a new peaceful understanding of balance and haven't had an issue since...

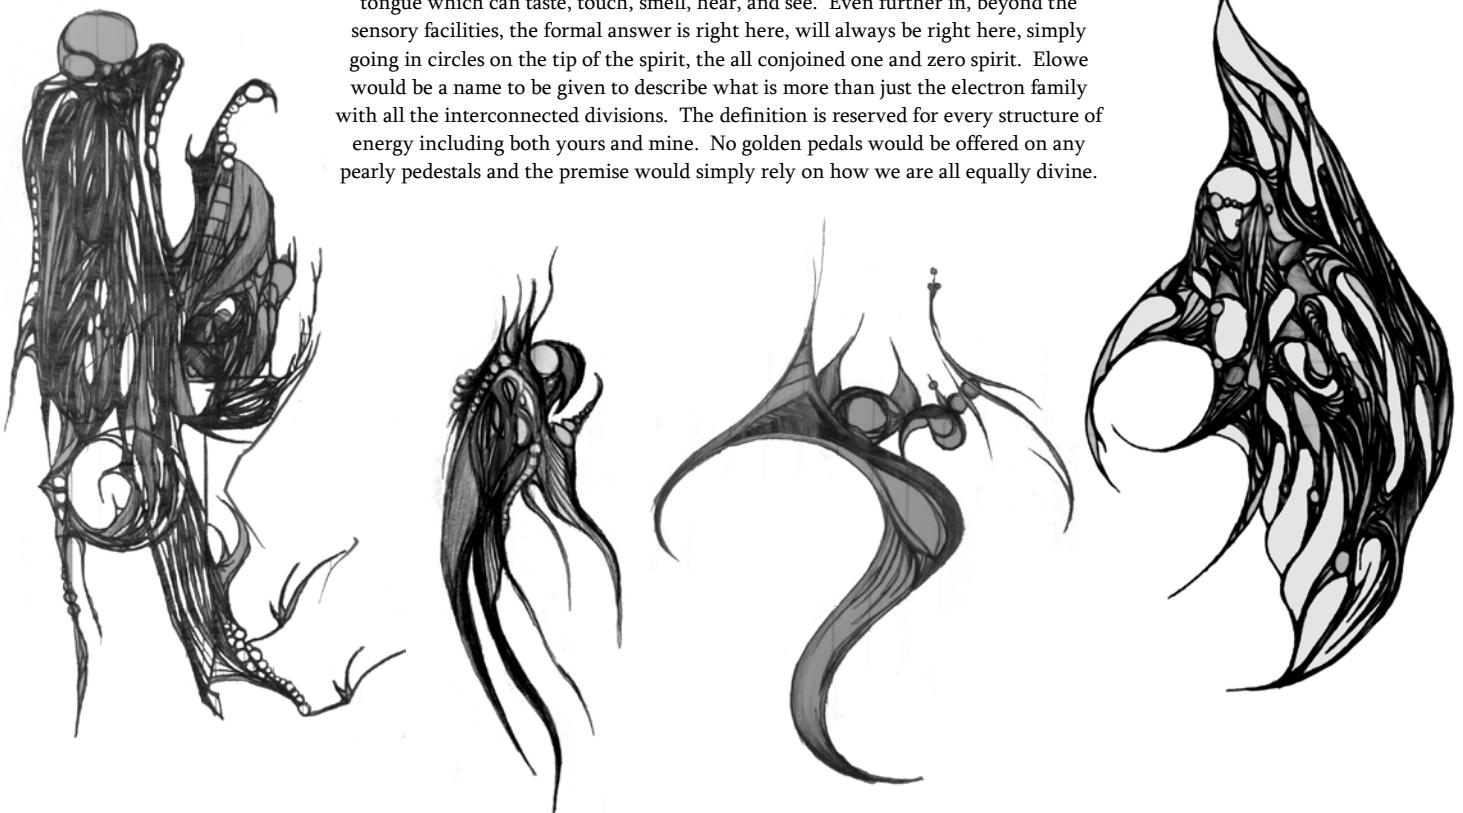

...And upon them I looked out from in, golden dragons intricately designed in jewels, ornament décor, and crafted skin. They lined us in a row standing us up with arms to our sides to look at us and inspect us in our dazed sleepy-state eyes. It is only a wonder to think of the others, who were lucid in the same kind of mental choke. The background was a familiar neon smoke of floating wavy lights with a bright blurry coat. The details are hazy at that moment, but in the instance of their peculiar introduction, I quickly woke up to think of the tales of abduction...

...And upon the metal land, an evil one came as a calm suited man. Levitating above the space port, taunting with an unshakeable stature and an arrogant snort, he guarded the green pillar which acted as a portal to the collective energy source. Scurrying around with subordinates he wisped as my usual lucid powers were completely absent from grips. The battle never happened and the contingency was left open. Lost in the memories I kept on seeking, I will always remember that strange colored beacon...

### Thinking outside of the sphere

What is the key to answer all king and queen secrets of secrets? Like the thought swimming outside of the grasp of memory just out of reach, remembered so well and yet the words associated to define the parallel structures just cannot seem to form. In the mind, a well-known perfect clear picture of what 'it' is forms as the visual comes and goes, usually on its own discretion. 'It' is right there, on the tip of the tongue, the tongue which can taste, touch, smell, hear, and see. Even further in, beyond the sensory facilities, the formal answer is right here, will always be right here, simply going in circles on the tip of the spirit, the all conjoined one and zero spirit. Elowe would be a name to be given to describe what is more than just the electron family with all the interconnected divisions. The definition is reserved for every structure of energy including both yours and mine. No golden pedals would be offered on any pearly pedestals and the premise would simply rely on how we are all equally divine.

## Reflections in the mirror

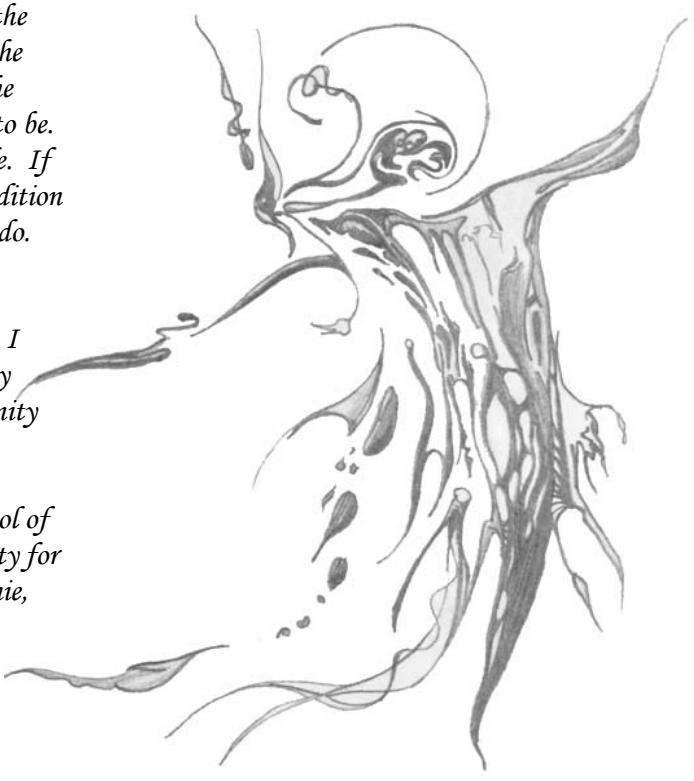

Who am I, what am I, when am I, where am I, and why am I?

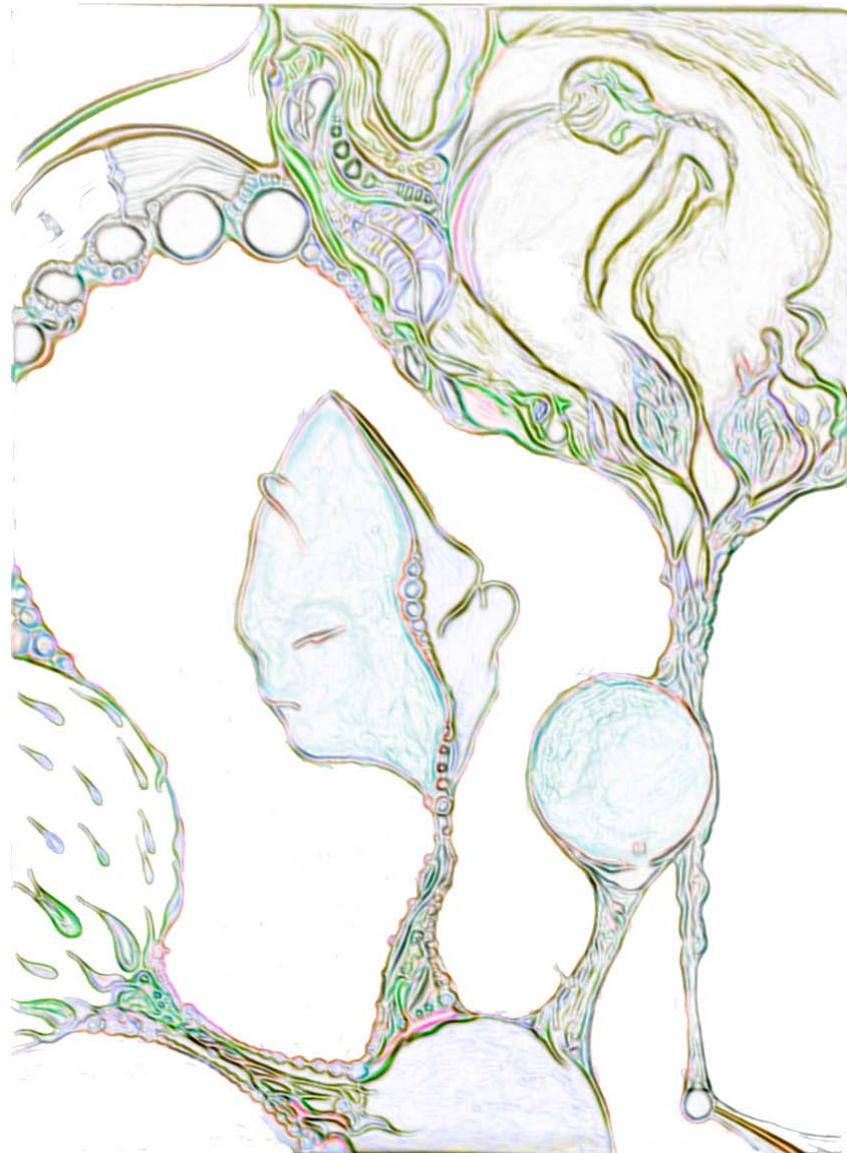

This collection of thoughts may not be a cup of tea for many, but this is intended for everybody. The sequence is necessary including all of the pages and words in between, which within my favorites is what I really mean. What could be the consequences to these mumbled and slurred words? There will be no gimmicks besides for being a coloring book of a delusional phoenix bird. My paranoia does not fear the corrupt, for this is an ace, a joker, and a trump. The weight lifted from my winged shoulders when this is finally finished will be diminished and the feeling will far surpass any place of being first or last as well as any imagined monetary exchange of any kind of material loss or gain.

This is over a decade long continuation of an art class concentration focused on the elusive definition of enlightenment. This is the result of an unfinished portfolio. This has become my unsourced book report on the universe. This is a hidden story told with poems, images, numbers, and words. This is a joker's joke. This means a whole lot more than I can ever really describe. This book is the mirror to reflect the soul of myself. This is a macrocosm inside of a microcosm. This is an atomic seed for a new kind of cosmic tree. This is an eight rung circular ladder. This is a time travel machine made of fluctuating clock arms. This is one turning into seven turning into eight turning into thirteen. This is a one-hundred piece jig saw puzzle. This is one-hundred by one-hundred by one-hundred.

I am an eternalist. I believe in everything and nothing. I am not familiar with supernatural events or any paranormal phenomena whatsoever. I am a colorless spirit without a remembered origin. I was born human and then added the personal attachments of what I am. I am a drunken donkey galloping around in awkward circles and crooked lines. I am a mime that rhymes with signs. I am the designer, I am the artist, I am the writer, I am the poet, I am the illustrator, I am the editor, I am the photographer, and I am the founder of this, whatever this may transform into and end up to be. My name is not important. No claim to fame will ever be made. If I am allotted the time and allowed the opportunity, a special edition will ensue. From here, there is much more I would like to still do.

If I had three wishes: I would wish to attain the complete knowledge of all consciousness from all creations from all ages, I would wish for the ability to manifest and alter energy from my phantom finger tips, and I would wish for the option of immunity from any kind of alternate influence on any kind of level. With these granted wishes I would then grant wishes while maintaining under the working balance of the universal protocol of love and harmony. The purpose of this is to reserve a community for the All, a place where I am a genie, a place where you are a genie, and a place where we are all genies.

### **Illusions of Grandeur**

Am I what not what I am?  
This question often comes first  
Before secrets are whispered to a nurse  
Similar words hold together a repeated curse  
How does one originate an un-owned source?  
To self-proclaim places the original in vain  
It is almost as if trained to say  
Proclamation can only coin a certain few  
Symbols, words and numbers leave the rest undue  
Colors start to fill in with red, yellow, and blue  
Releasing the caged definitions of the truth  
What delusions can lie within a dream?  
Awareness eludes nightmares of many themes  
Armed with some paper, a pencil, and a time machine  
Dancing like a joker, laughter quells the means

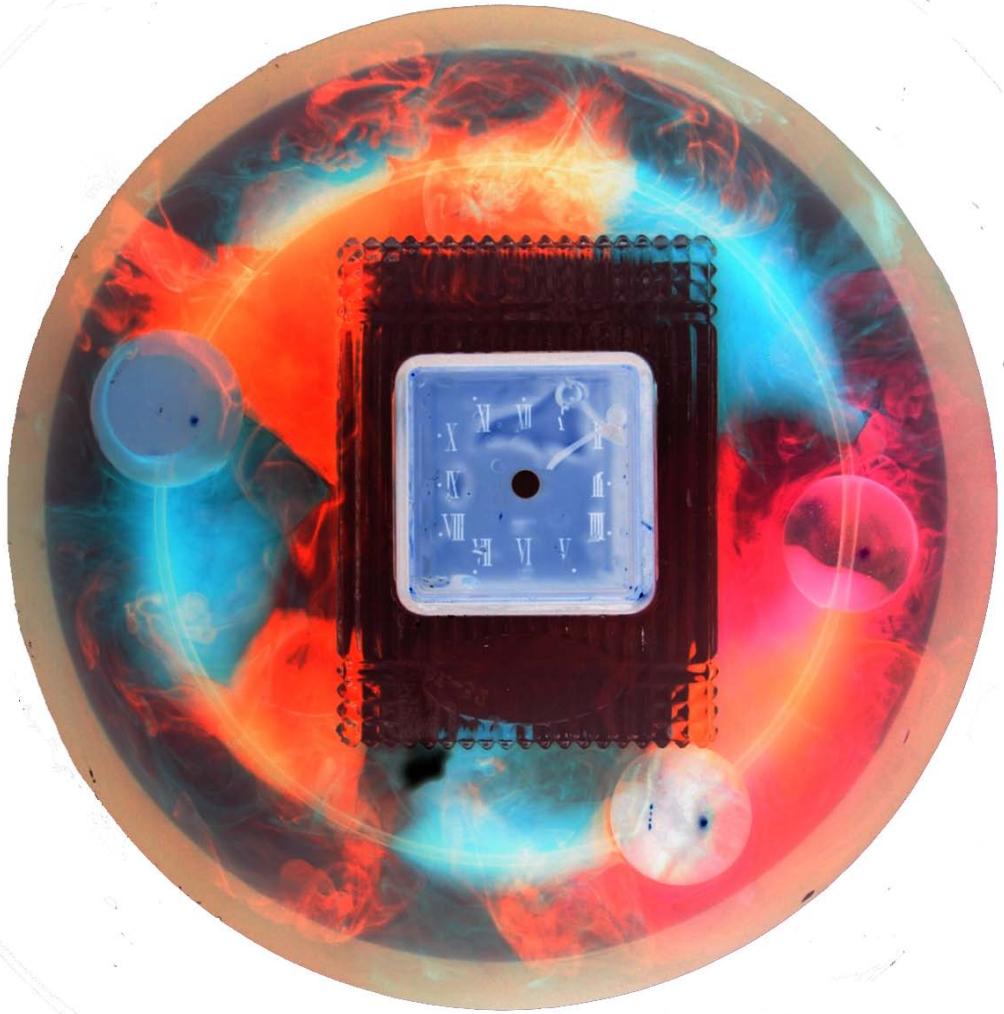

## *to play a joke on the gods*

*And the character Cant recanted, while collecting his notebook of dreams titled 'Clocks within Clocks within Clocks: the Blueprint of the Infinite' and subtitled 'you were never meant to read this so please put it back where you found it', which consists of a fiasco of numerous sections made of wax, ink, and pencils.*

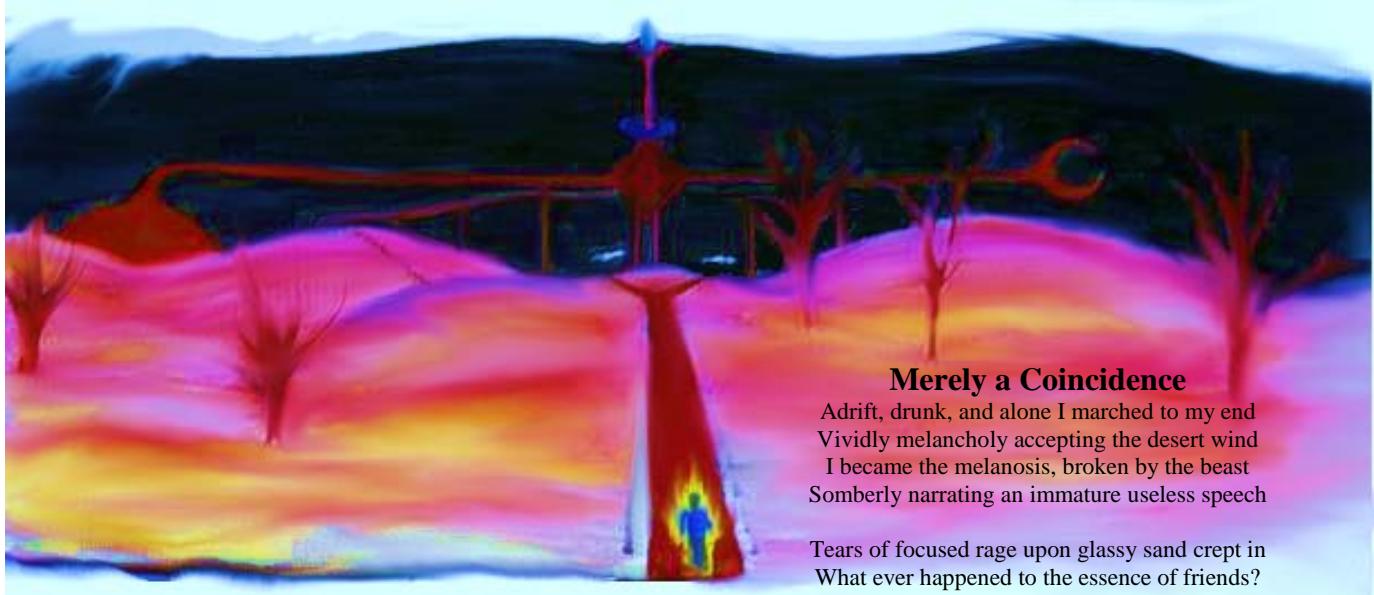

*"The frequencies of the legally insane patient and the frequencies of the legally insane doctor are so much different" Cant thought to himself while speaking out loud. "Medicine is the only voice of reason and these guardians will never even listen. I have finally finished this and none of them think I am serious." Looking over to the unused paper cup of water and the small plastic cup of capsules next to the sterilized bed, Cant mused to himself about the prior night's voyage. "It was a vision of my own slithering scaly skin, colorfully prismatic, glaring the reflection of an undefined orb's tinge. A third time the bliss had been revisited again." Cant then readied his sheets and blankets to prepare for his materialization into dreamland. As his racing thoughts altered from light speed to the speed of dark, the obsessive remarks in his messy notebook filtered into his subconscious as he recited his prayers, made up in third-person perspective.*

*"A patient diagnosed with suffering wild delusions of grandeur drifts peacefully off into sleep, thinking and speaking only in terms of uniformity. Prepared was he, for the routine of having sequential dreams within dreams within dreams is relatively easy. Becoming seized in a delicate essence, Cant is brought back with eyes wide fastened. From each heavy zephyr to every little pebble, the several energy particles are going to glow and treble."*

### Clockwise Faces

While I ponder and judge all of my own opinions  
The collection going with and against the grain  
Finding myself profused in a vivid skymare  
Completely overwhelmed by a kind change  
I then ask myself what truth may lie here  
After all nothing truly stays the same  
A circling answer that is all too familiar  
The one and none proclaimed by many names

### Merely a Coincidence

Adrift, drunk, and alone I marched to my end  
Vividly melancholy accepting the desert wind  
I became the melanosis, broken by the beast  
Somberly narrating an immature useless speech

Tears of focused rage upon glassy sand crept in  
What ever happened to the essence of friends?  
Wish-less with a gabble this and a mumble forgot  
I truly do not care anymore about the plot

Doomful devils paced around at the local floor below  
The receptive anti-merry men scoured, looking for souls  
A blinding black levin swiftly roused from the mountains  
Chanting in heavy pressure holily, quicker than an instant

In the event of closing my eyes for the last time  
Willfully saying goodbye to any kind of sigh  
I heard the gestic soldier relay the Orcus order  
“Abolish this weak mortal, ravage his whole hollow”

Through thin eyelids, an orange never imagined  
Shapeless was the extremum, the un-hologram  
The pacifier, the espial, the miracle to disenthrall  
Affined am I eternal to this quintessence of the All

What transcendental light just made fear froze,  
Effortlessly clearing the land of ghostly shadows?  
New all of this is, filled with a willful promise to live  
Resuscitated and untrained, fathoming the insane

“Please excuse thee, speechless am I to speak  
Do understand, this is beyond my comprehensive reach  
Inform me, the naïve, what spirit honors such a greeting  
Or even rather on how I can try to return this deed?”

The canny whirlwind of feeling possessed  
Silent was the message, engraved in length  
“Seek the self genie, imagine and create  
Manifest a gate, become willed by fate”

And I retreated from the thought thinking  
How will I separate truth from delusion?  
What can I grasp onto to keenly see?  
Is this not a moment of pure insanity?

The impossible heartily said  
“Do not worry for life will unfold as it should  
All you need to know is simply nothing  
Truth will find you and take you to the source”

Upon this statement I stay dumbfounded  
Without a name, still a dream uncounted  
Of what I can remember of that empirical place  
Alien in all the nature of world and space

### Dream\_Bubble\_Matter\_antimatter\_antibubble\_antidream

Cast out of a rural mural and transported through a blue tinted portal, I conjured anew as a subtle air bubble full of multiple essences of whimsical trouble. Hasty fluid breaths in a liquefied canvas insisted to finish all of a sudden as the body materialized itself abruptly into substance. Wet eyes flutter as matter tips the scale, the head breaks the surface and gazes skyward to an atmosphere of fire frozen in waves of sails. The bolts of ice strike the same place more than twice on this ocean-like paradise. The flashes entice any kind of life with pulsing pillars of violent strife, slicing no matter which, with a strange laser kind of knife.

Awakened when wading for the last second, treading only for a moment, soon to be no longer buoyant. Tis' the last chance to inhale a small gasp to grasp the collective past of a jester's sorrows and laughs. Taken quick by the pressurized abyss, swiftly becoming an example of karmic influence, fate mistakes the bait as gravity accelerates the weight. A solid sinker falling faster than rhyme with no place right to hide and only lightless places left to find. As the battered lungs store recycled air, I think of the key needed to become released from the confines of a weightless chair. Unsheathing the lost puzzle piece, I breathe in the water and become part of the ocean's energy underneath. As marine creatures scatter about, the descent was only an instant, like a meteor falling from above the clouds. Long time ago choked and long time ago cloaked, a silent focus became soaked among the many bio-illuminant ghosts inhabiting between coasts to coasts.

Finally settling, sitting cross legged on the depths floor, a blinking persistent column explores even further downward to engrave the crown of my forehead's door. Precise icicles assemble the recent alien molecules of added air just to find the new odd spine begging to be unified and aligned in pairs. The strife becomes a whole lot more nice as the fusing instrument constructs a bridge to make a rare kind of element from some random sediment. Residing in an acquired underwater threshold made of both an anti-bubble and a few different chemical molds, light emanates from the inside as neuron pathways embark in and out along with the wavering tides. Gliding from dream plane to dream plane, surfing the dimensional range, the practice gets practiced of popping in and out of existence for what only seems like less than seconds.

## disobeying the syntax

I – Blast on me a chain of lightning, with no more life there will be no more awareness left, no more angel of life or death. Prying the mind to understand how we are all the true rulers of mystic lands. Where will security lie when nothing stays the same except maybe just an unknown plane built with controlled imagination?

II – Put the lewd cube center stage to speak for the corners of the age. Zero is one and one is two, absolute laws can restrict only a certain few.

III – The hourglass has passed and the sand has dropped, the visions are always what they are not. The directions spin counter and clockwise in exquisite finesse simultaneously as guessed. Lost testaments expressing reverent estimates speak loudly for the language of betterment. The construct has already been built by a starving pack of wolves cloaked in a shining star's skin and clothes. This has no intentional disrespect to goodness, but is ever so denying the laws of the sun. This is destroying the concept of being locked in a clock. This thirteenth number has no borders in which to dock. Born into fusion and falling into this all, face to face with the mentally strong. Nothing really more and nothing really less, this is merely just trying to suggest an overwhelming feeling of happiness. We are all eternal love and bliss. There is no reason to be saved from this.

IV – Comparing time is like comparing colors while being blind. [In a grid, 'x' would be the expansion of space from the big bang, that which keeps growing and changing. 'Y' would be the measurement of an ongoing time, that which details the expansion of space. The duplication of the ancestral cell reproducing itself would be inside of this area. This would make a few different pictures. One picture would be like looking down a ladder, an un-spiraled helix, going off into the distance. The rungs would divide the panels of the wall of time, each like a spoke to the gears of the universe life. This wall could also look like the inner view of a humongous ribbon lying sideways on its edge in a giant circle, which only a portion is viewable in our vision. 'Z' would be the plane of different ribbons. Together x, y, and z would be the tangible strings to the fabrics of time.]

V – "You stand on trial for treason for opposing the tree's sun. Foolish son of lungs, you will be pummeled and made an example of. What will you do with love when you host a stampede, mauled by feet and made into feed? Cleaved keenly you will be left for dead indeed. There will be no more appeals or pleas, there is no monetary fee. The only need will be for you to bleed."

"Can you not see... what stampede? I see future friends who will sacrifice me. This soul will smirk as you do your worst. Slice with a sword, but do so on your own accord and not just by giving orders through force. I will not let you reign over me and I will not be willed down to bend to quivering knees. This joker will look into your eyes just to see you take my life. Fear of the eternal is not within here. Do keep me fully kept in contempt as these fingertips have found the keys to the infinite."

VI – Thou shall give me room to breathe or I insist my awareness to leave.

VII – Oh, the jealous gods playing games of life and death, setting up the stage for an ushered apocalypse, funded by presidential powers publicly laying out the prestigious red carpet. Costing the price of many lives at least, questionable deities bless the capitol of what was never really free. Notice the stars and owls in the streets, the buildings and stones in symbolic discreet, the select representatives doing leech collared feats, starting wars on repeat while illegalizing peace? Years and years of following sheep led by respectable lunatics who honor the decorated royal puppets of glee. Purported to have done righteousness by sources we will not speak while walking like titans on the unknowing weak. The intimidating money god presides as a convenient disease, members of the zombie state of the union clap please. Did they not say on the silver screen surface, how this entire system has been designed on purpose? Fair, just, and honest is anything but, and a lot of the opposite. Just who is us and who is them, who stands as a patriot of the entire universal land? Minus the division and multiply the sum, who means what when we say we are all one?

VIII – The time has come to leap into a mythological bird and turn missiles into duds and bullets into buds. Flying swiftly through the hearts of humans and coursing logic through the veins of old and future friends, stopping whole heartily the murderous intent of mercenaries and assassins, those ordered women and men who are able to absently vent. Send the cease-fire to the operation stations of all the nations, including all of the spiritual warfare convents. Shelter the weak and humble the strong, continue to fill the atmosphere with equality songs. As the moment of silence overtakes, time stands still before the poles shift and change. The reverse transformation will come on peaceful grounds, exposing the war gods who stand proud with blood dripping weapons and their bone fed hounds.

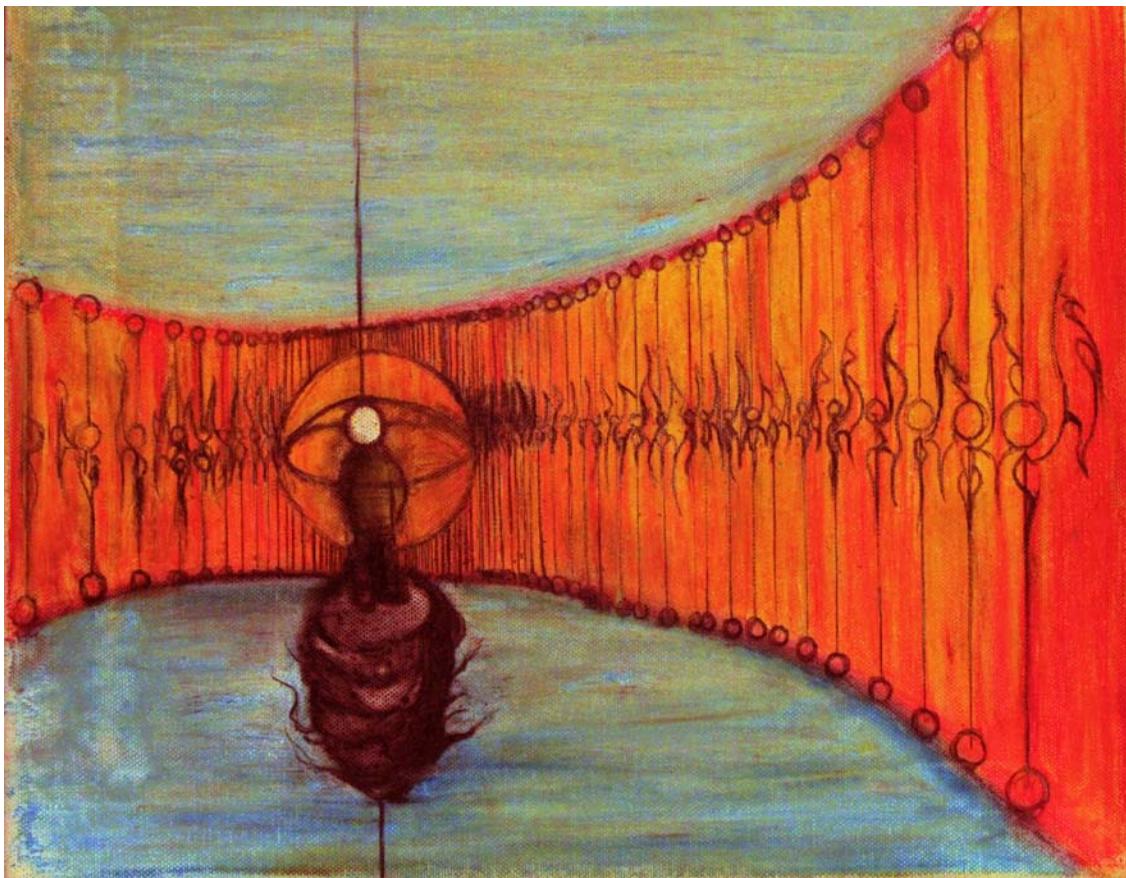

IX – Let the treasure thoughts release, initiate true change from every single defining epiphany. Realize and do not go back, level up and stay on track. Bipolar tendencies of mania and manic dismissed, continue on to try to visit the island of enlightenment. Try to visit as many times as needed until allowed to become a permanent resident. This circular vision is a new kind of heaven thoroughly tapped into the vaults of endless invention. Weary of any kind of reason, just writing, drawing and thinking. Becoming a genie just to realize how death could only free me.

X – Upon this place of graceful wonder, sitting back to wish and ponder. The warm snow melts the waters of frozen heat and then the carnage reincarnates into a blissfully rampant sleet. Into the spirit, ears cannot hear it, finally outside the body and inside the soul within.

XI – The projected colorless alien, almost like a black lion displaying an auric mane with countless diverging lanes of asperatus clouded fame. The compressed orbs of inscription whirl around like a fire laced hurricane, charging up and charging down and exploding into exclusive single point rounds with sources unfound. Turning light into sound and melting the unruly crowns while harnessing the weight of the weightless atom, becoming the endless without an origin to fathom. The airy impressions turn into future regression as the power of peace builds unseen automated creations of exulted perfection made from symmetrical movements of singular artistic expression.

XII – Let the sacred fire anti-burn, Let the sacred water anti-drown, Let the sacred light shine anti-bright, Let the sacred dark guide thru the anti-night

XIII – All I can do is smile as I journey into the wonders of the wild.

## Mathemagic

This is an idea of the universe being an embryo of a developing universe-sized creature, not yet aware of itself and living on a much larger gear of time. The birth of origin would happen at the big bang and the expansion would be similar to the timeline of duplicating cells, with all of the evolving changes, from the embryo to the fetus to the shape of the organism. The solar flares which emit the cosmic radiation could be like the producer of the RNA code which would build protein life on ribosome-like planets. The living, dying, and reproducing space structures would be like the living, dying, and reproducing cells which transform in their own way. The trillions upon trillions of stars coming together to make the universe would be like the trillions and trillions of molecular components of our body. Solar systems, galaxies, groups of galaxies, super galaxies, and hyper clusters could be like that of the other essential components to our body like types of cells, tissue, bones, and organs.

The dark space and lit objects we observe would be like how quarks and leptons might observe larger structures like protons, atoms, and molecules. How many eons of time must pass before a capable microscope is built to see those quarks and leptons wave to us or until a universal creature is advanced enough to build a microscope with the capability to see us wave to it? Communication between the scales of the infinity would seem to be improbable. Would the difference in proportions of a quark, a human, and a universal creature change the rate of the speed of light as the ratio of distances from to and from would be so drastic? A blink of a universe creature would equate to the time span of millions of years for us and maybe even more so for a quark or string. The DNA code of a universal creature would replicate the universe code in which it operates. If the complete data of a universe is acquired, fate maps for the unknown could be charted to show the correlations of all the missing 90-ish percentages. The vertical and the horizontal in this set of dimensions and that set could only begin to scope the grid of a larger environment holding a number of universe creatures in a new type of concord.

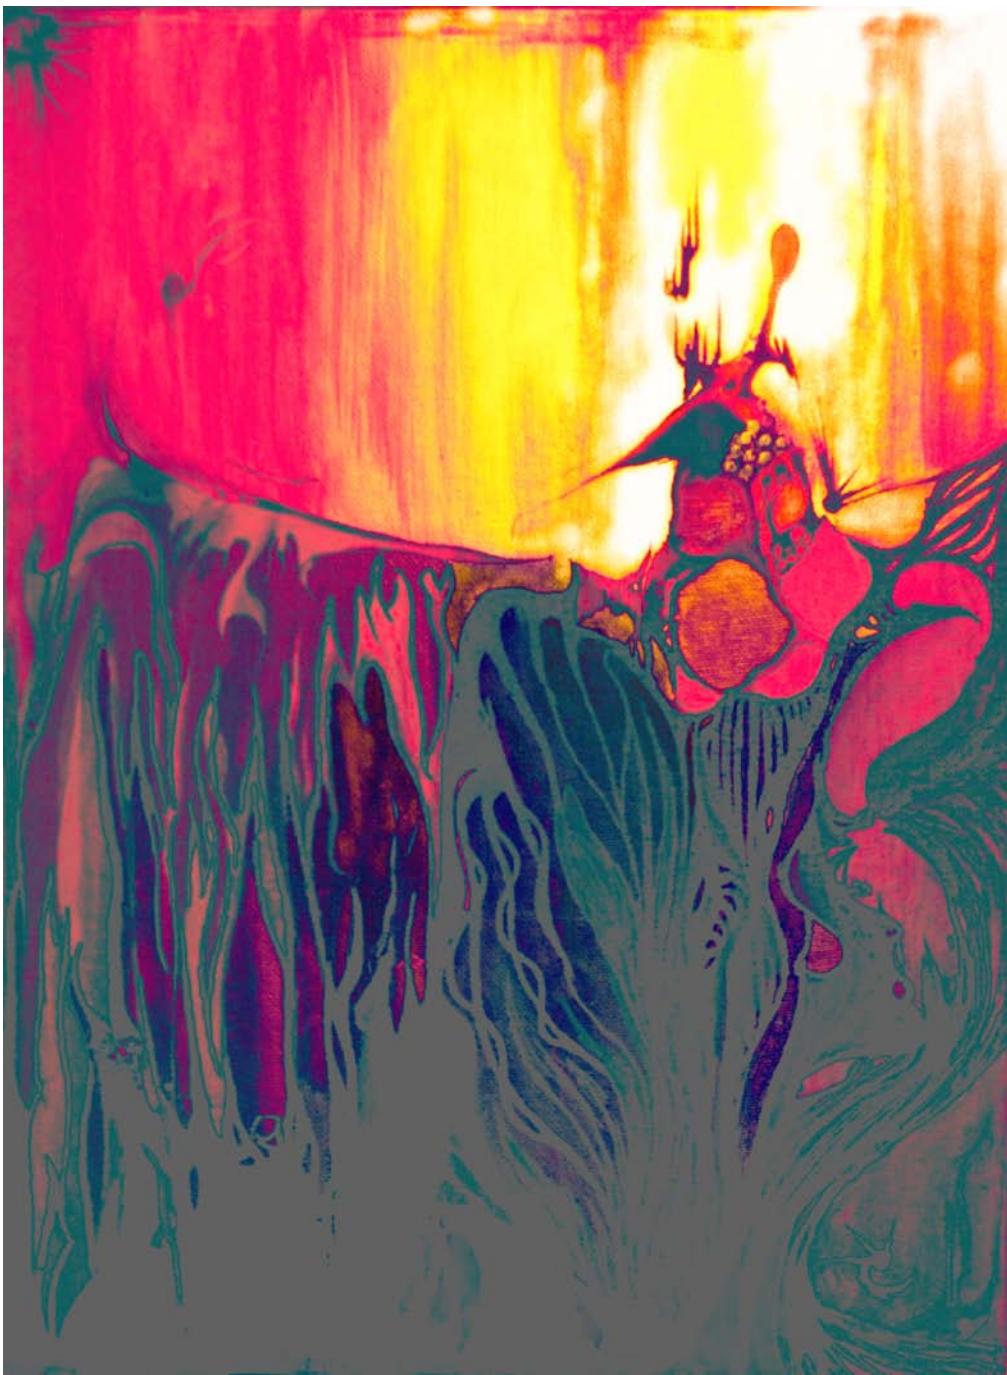

The formation of these meta-manifested bodies would be built with space crystals. If all planets and all stars are crystals inside their core moving together in an intricate network of gravitational space, then they would imitate the formation of our assembled bodies with all of our molecular crystals. They, as we, would be crystal beings and would potentially be made up of alien colors and unknown geometrical shapes unobservable to us. The essence of a new light, not like a photon or not even like that of an electromagnetic wave, would instead be whole undivided energy consciousness consisting of all the anti-matter and anti-dark matter combined, not constant in speed and having shape shifting abilities beyond comprehension. The light would create the newborn universal bodies of intention. The reproduced fruit of consciousness is the continual process of an ever growing family tree of energy and possibility. Energy will choose to be infinite and always, even when dormant in nothingness and in silence. Instinctively, energy will be compelled to survive by the means of micro and macro producing itself, creating life within life within its own eternal life. Energy isn't lucky, energy is luck itself.

## Friends and Trends

Why hello again thinking demon from the made up heavens  
Tell me where are your wings going to be heading?  
Oh wait, don't let me know and let me guess,  
Diving into an obsidian pool's depth?  
Why is it so dark in your heart?  
What separated all of the colors apart?  
Is it the grudge you feel against the wind?  
Or the last stand against all of your friends?

Miscalculate not and  
Don't overlook the obvious  
This energy is cloaked in disgust  
Disguising a shadow's blindsided trust  
Under the heart's floor roams all of the halos  
All of the eternal castles, hosted by souls  
Protected from black and white holes  
And to any famous stranger's tolls

## Energy Collectors

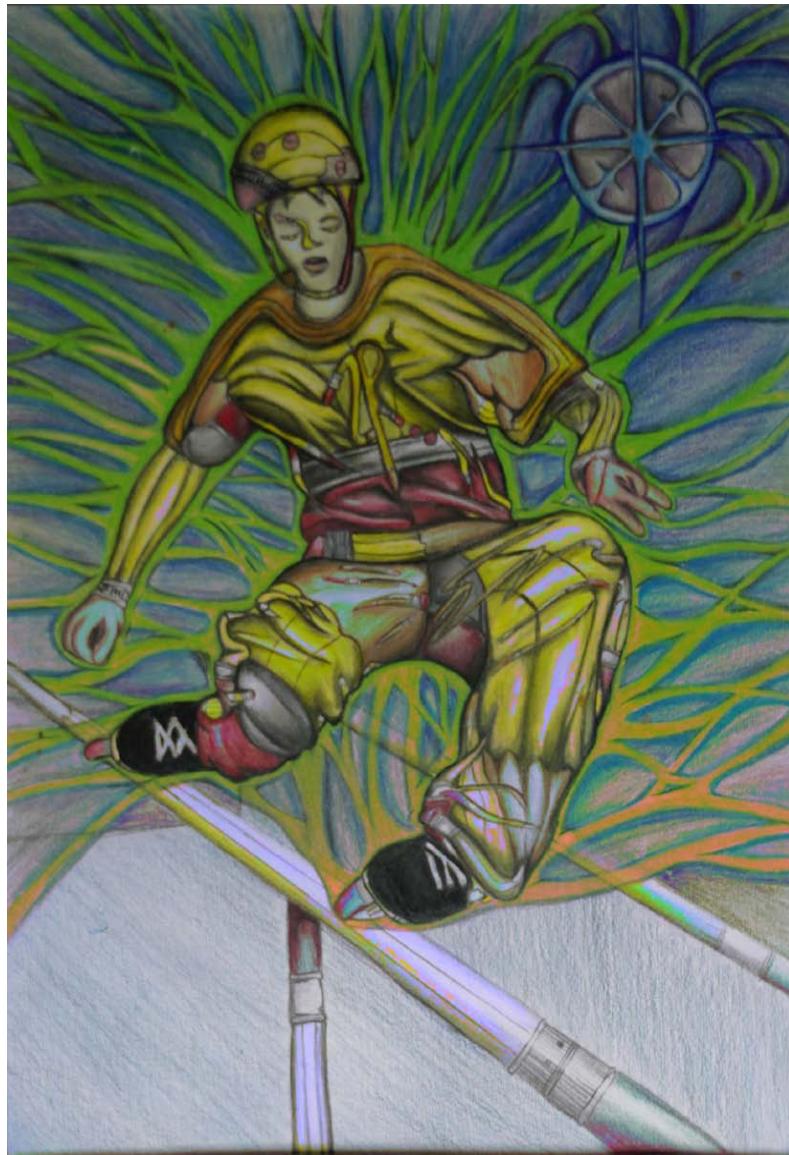

If souls are energy and energy is currency, then the absorbing and redirecting of energy would probably be regulated in some kind of otherworldly fashion. The spiritual banks would be funded privately or collectively. The sole proprietors for the energy profits would depend on whether it was a privately owned franchise or a publicly traded market. The founders, chief executives, and high positions of power within an afterlife company would range differently from pyramid to pyramid. In a monotheistic tone, the spiritual bank of a god would loan life with a questionable amount of interest, if any, to the entire target audience. In a polytheistic tone, many gods would be the chief executives of their own personal divisions and each would have their spokesperson representatives with their corresponding logos and slogans. The merger of different companies to form new policies of worship would happen frequently as the dates of establishment would detail the time table of competing industries. The public stock trading companies of investors, namely the population of souls, would direct their own accordance. Literally in essence, they would create their own grouped structures with combined frequencies. If the monopoly of souls is ever at hand, support the free and non-profit afterlife insurances.

### Paranoiac Critical Method

|  |      |
|--|------|
| In these ages of confusion   | 1pm  |
| To follow a conditioned dream  | 2pm  |
| By accepting sin and excepting sin                                       | 3pm  |
| Feeding the angry hunger of annihilation                                 | 4pm  |
| On the lands of many bloodlust corporations                              | 5pm  |
| Trading lives as easy as binary digits on a screen                       | 6pm  |
| Watching carefully while sitting down on their seats                     | 7pm  |
| At the world, a lit fairground under their illuminated feet              | 8pm  |
| Mental terrorists banning everyone from knowing any of this              | 9pm  |
| Protected by schizophrenic therapists with all kinds of wish lists       | 10pm |
| So beside for breathing ignorance, where is eternally peace and rest     | 11pm |
| The questions of the guest, blessed best by not knowing any more or less | 12am |

|   |      |
|---|------|
| The sleepwalker's mumbled voice, cured by the doctor's drug of choice | 1am  |
| Gazing blankly into the television, into the worshipped and adored    | 2am  |
| A subliminal wired breed of the tired, unchallenged, and bored        | 3am  |
| Look how they highlight profitable and entertaining wars              | 4am  |
| The basic cable news channels, the horde of whores                    | 5am  |
| American dreams are desensitizing everything                          | 6am  |
| Brainwashing with a vast elusive spotlight                            | 7am  |
| A public blinded by deceptive insight                                 | 8am  |
| Ignite the fire to grow without liars                                 | 9am  |
| Conspire to unify a fair empire                                       | 10am |
| Share true visions of peace   | 11am |
| There is no chosen elite  | 12pm |

### ***Rolling is Divine***

*Take a deep breath then take a look. There are some things you will not find in a book. There are places where magicians are plentiful and popping in and out of human potential. Naturally and sometimes in the dark, our universes have become a treasured skate park. Remember the saw dust scent of origins inside a warehouse surrounded by the atmosphere of electrostatic trends? Take a deep smell of wood grain, keep the memory fresh again. Simple friendship and stronger ties are making up a community life where all are welcomed, especially the forgotten friends of many lives. Just notice the huge sign on the wall right there, it says evil is not allowed in here. There is all this outer space to fill, grab a hammer because we have runways and landings to build. Let us skate together at the speed of light, with switch being both left and right. Every equal harmony with every unknown particle, leaving this ambidextrous thought process with all these cosmic obstacles.*

## *Manic Mania*

### **Easiest Cure**

Confused about how all of this has all happened  
Fearing these predictions which keep elapsing  
Not knowing the consequences of life's lessons  
The everlasting games of relentless depression  
Never intending for this feeling to overcome  
Cornered my soul into being completely numb  
Scared to turn around to calculate all the sums  
Resorting to swan diving, learning to fly for fun  
Walking to the edge, to rid my last possession  
The silent music seems a lot clearer in the wind  
Eluded, I take my last step, regrettfully in sin  
All the options of luck gave way in this mistake  
Too late to change as I fall to my surface grave  
Each millisecond the ground draws a little closer  
Ending this entity, very soon this will all be over  
Assuming gaudy horns and damned black wings,  
To be cremated by the kings of black lightning  
The transition shifts and the impure dark suns sit

### *In the Depths for Reason*

Just pondered a nightmare thought  
What becomes of those I cherish,  
Those that melt away into the dark?  
Should I forget them all and persist?  
Nay, how could anyone be dismissed?  
Feeling compelled and ever so inclined  
To gather inspiration of a new kind  
I will go and search the underground  
Until what has been sought is found  
Those who lost hope and failed to try  
In despair with a false demi-god's lie  
Who would choose to be by what side,  
To seek to free the accustomed weak?  
The reason that does not allow sleep  
From few to the many to the countless  
Change is always part of the infinite  
Even the missed will still have to exist

### *Calm of the Transient*

*At long last, a winter rainbow, an unbridled aftermath of molecular prisms is cast upon the elegant snow. Rippling the concourse and surfing the flawless crystalline surface, snowflake kisses moving motionless, sinfully ubiquitous. Absent is the hell bent and hell sent fragments of seconds. In between the tock and tick, witnessing forever the aesthetic. Unseen and dismissed in the rhythm of space, only but a trace placed on this page's face.*

## Infernal Paradise

Honoring the terms upon the arrival of my death  
Without distress, cast out from my vessel of breath  
Shadow or white, the option of my unmade nest  
Lured by a metastatic tunnel in an afterlife quest

Bypassing the time of the fellow passer-by's sight  
Insisting to perdue a devil's lie, toward the light  
Stubborn with grudge, not letting go of prior matter  
Instantly I remember the reason for all of my anger

Founded myself anew in a cornerless corner  
Reflecting transgression in the spirit of a mirror  
Unleashed an epitome upon a glass house of wonder  
For all this time, my old body had been the imposter

Chasing to breach, a false heaven's pearly gate  
Relaying such a guess of a foolish spirit's fate  
No need for disguise, waiting here in a benign line  
Where art thou gatekeeper, not yet a friend of mine

For is this not a test of intellect, I appease thee  
I will play, joke, clown, tease, and self believe  
Could any understand what these words mean  
As I appose all of the forgiveness of the deceased

If you should try to send me to temperamental suffering  
Behold this, my ticket to hell, for I created it by myself  
The power of the metaverse resides in the mind's eye  
With the freedom of choice, I see light in the eternal night

Having the will of decadence, teleporting through the styx  
Falling from the righteous for the experience of the present  
Spirit to spirit, with the many inclement incidents  
March forth poetic genie and nullify the paranoiac moment

Without the desire to indulge in the defense of words  
Just here returning sin back to the suggested source  
Depending without luck to conspire such an accident  
Inciting this insult for the potential of a consequence

To the dead souls, bear witness to the guardian watchmen  
They are trained by greedy elite kings, gods of deception  
Maintaining a cloak over the mystery for some odd reason  
Controlling the picture to be most appealing and pleasing

If one understands a tedious concept being one is zero  
How a god could be a devil just asking for many souls  
Know of a simple silent secret, we create ourselves  
Delve outside of the shelves beyond the many twelve

Do pardon my mistake as experience is learned with age  
For I have grown tired of listening to the guards of this place  
I ask for you to point a finger to the area of my residence  
So I can relinquish the facts of the correct and what is left

While viewing the vast scene of mocked dreams  
Homeless faces scorn each other with guilt and shame  
Withstanding inhumane cycles of some created game  
Playing in a looped system of an ironic insecure reign

Ugly and wicked, burdened by levels of ad nauseam  
Bounded to countless bands of isolated fiery islands  
Judged, then placed upon a land of deeds not done  
Unaware of unconditional love, the anomaly of a god

As I float among creatures and disagree with Dante's peace  
I dive headstrong into the molten fireworks of lava underneath  
Armed with nothing, more than the next level of thinking  
I cherish the collective pain awakening me from my sleep

Again I will die, living in the fire, for never dying in art  
Without a mind to confiscate, willed to break the layers apart  
Ordered chaos of puppet strings, no longer binding my wings  
The echo of sound rings reoccurring memories, they did not leave

Describing the pain in the dreadful pool of the unforgiven  
Starts excruciating and ends in an explicit amount of fun  
Dancing through a circular furnace in waves of heat  
Simple enjoyment, patience to mettle with the suffering

Sharing the weight of a godless ultra-fire palette  
Tolerance builds as my spirit begins to get use to it  
Well known energy surging within all the anti matter  
Changing a changeling into a being of utter freedom

Living with the condemned for the sake of unity  
I proclaim endlessly, forgive me as I forgive thee  
Let us disintegrate collectively all of the misery  
What is left will turn to ash to smite the former genie

Conduits are lit in the luminous fair golden blaze  
Lost in love, burning in the chaotic magma maze  
Souls shift the winks of cold and bitter regrets  
Not let, just yet, into the blessed kindred mindset

In complete alms, enraptured by lucid spirals  
Whirling souls, ordaining others by examples  
Part of a purposeful goal of an equal order  
Atoning lush sins by methods of exception

While embracing this past and future rhythm  
Happiness keeps fueling this intent with reason  
Magnetic frequencies no longer holding any limbs  
Barely coming into terms beyond placid imagination

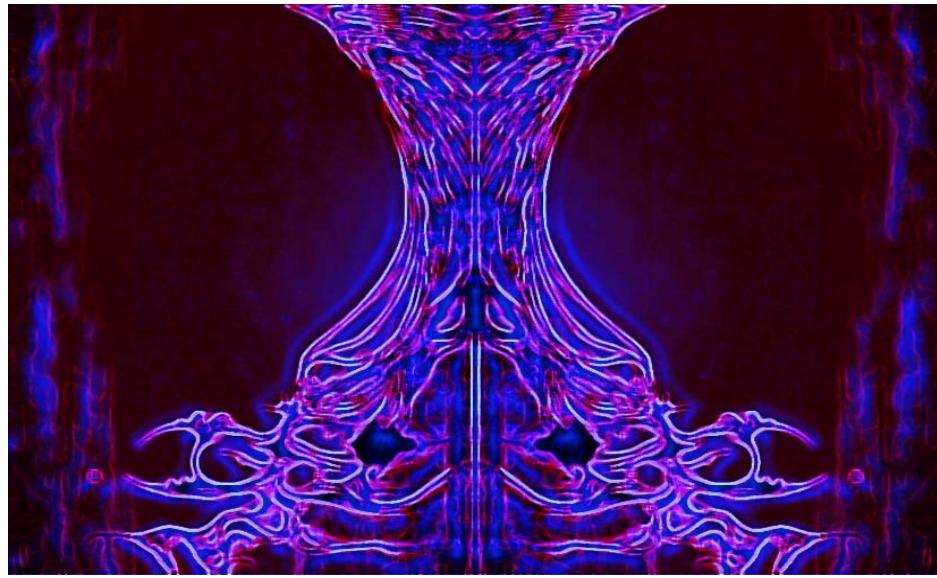

What is still to become in the below and above  
On this new comfortable level of undefined love  
Bring this peaceful power to the misled young  
Unconditional is the song to be sang and sung

If there is no point to believe in any of this  
Then color outside the lines of a desirable wish  
The impossible fusion of an angel and a demon  
Transcending past the laws of the nuclear sun

Sinking quick in the bottomless torch of an orb  
I couldn't help but going further into the core  
As my lighted shadow intensified evermore  
The hatch became unlocked to the cosmic door

Out of the deepest black has arisen a phoenix  
Heaven bound and visiting back to hell again  
Born from the immense conclusions of flame  
Returning now to the home of the dragon kings

### *Cloaked in Feathers of True Fire*

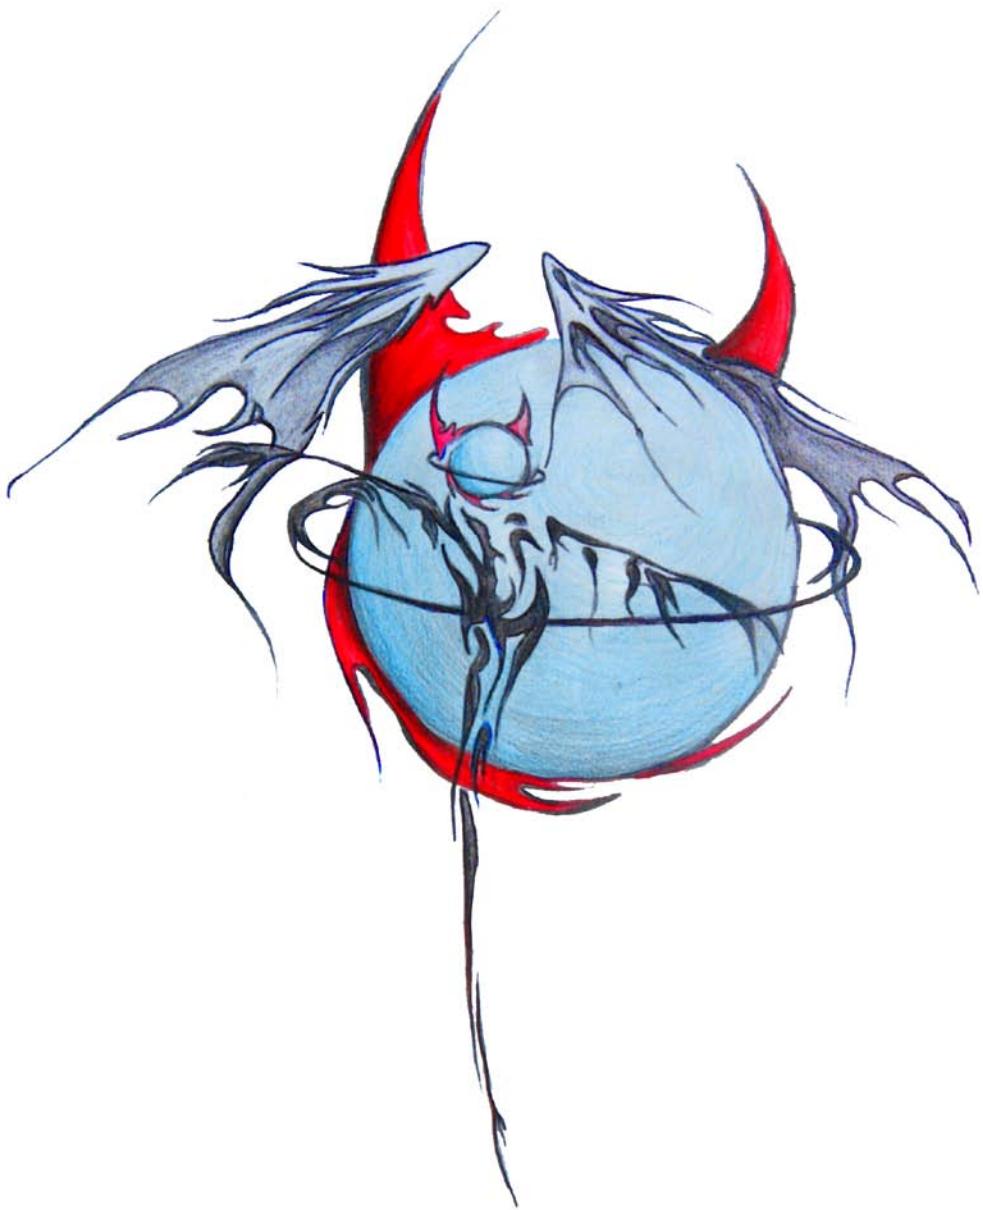

*After brushing off some ash, departing inner farther fast, the capable bird has finally heard the calling of the source. The stirring memories charge the first familiar flap, finally heading towards the center of the circular map. Just like instances done so long before, enveloping wings of translucent radiance start the symphony of the sound of a new score. Phantom limbs aimed towards the true origin of sin follow the fore-shadow twin all the way to the pearly gate of an unknown dragon's den. The trail of liquid metal leads quite fast, the true fire is disguised as unseen gas, containing the collection of all the visions of the future and past.*

*The prime echelon of the afterlife, the hidden sector made from the pick of the crop godly nectar, at least a quintillion strong as seen under the umbrella of an unstoppable controlling one. A polar half who has hijacked the whole, invasive and dominating at will with all the reins of control. The giving of strict orders never questioned maintain, guarded by the perfect radiant light beings of the game. The highest rank of trained magicians with the densest kind of intention, manifest mongers armed with unparalleled perfect skill and wisdom. The countless congregations of brilliance melt flawlessly together in embedded coherence, a unique temple of bits warring with a fearless sense, hence the larger scale ambiance.*

*With the intake of foreign element I breathie, remotely viewing the mass distortion of peace as a dormant unseen dream. Still unsure of the effects of a prior metamorphosis, the surging energy is weightless as reflected by the complete lack of mental pressure and physical stasis. Already in too deep, reaching the peak of being asleep, warming up to commonly breach the feat of quantum and cosmic leaps. Undetected by the undetected, moving past the meditating elite while sustaining the freedom to think. Dancing like a joker and prancing about uncensored, evading the psychic alarms of whimsical charms and overriding the ready to pounce predicted response. The trace of this colorless aura will only haunt in concord, a zero at one with nothing, levitating among the entire grid of the sum, disengaging any quarrel of any spiritual atom and disavowing the slaughter of any alien wave-like pattern.*

*The magnetic pull of destiny insists, compelling the quest to finally find an end. Exact vision has started to set in, showing the truth of what lies beneath the podium. The hallways of an organic labyrinth start to unwind as the seven macro-centers become secretly intertwined. The final door appears up somewhat quick as the trick to enter becomes rather obvious. The reverse feeling of a sinking heart's gravity is the spiritual key. The creation of a gateway opens directly as the transport just happens to happen to the supreme dream mainframe of the colorful crystal dragons. Those who encircle the unchallenged shared crown, the council of thirteen act as one who together mass manipulate lofty dimensions with a common tower of intention. As they attempt to infiltrate the pristine green column vertically posed in the center of the mechanized room, the time to loom happened ever so soon. Once upon the acknowledgement of my forbidden presence, the color of surprise was curiosity before malice.*

*"So I imagine you trying to stop me before I leave, but do know you should have stopped me before I came. I am already gone as I was never really here. I am altogether an eternal home where there is not any place left to fear. While basking in my own dimension of one and zero peace, this wayward echo chooses to wander and willfully speak. We will use our will to share the idea of true eternal love even if this stimulates the dreams of the mind of a god."*

## Beyond Heaven and Hell

Lead the heart's dream to unlimited freedom  
Open the gateways of the infinite paradise prisons  
But remember the lost tales of forsaken men and women  
Fear falls asleep when foolish courage eclipses the sun  
Keeping this sinful vessel of death to call my own  
Energy rehearses to celebrate these old songs  
Of when the destruction of hell has begun

Follow the mind's perception from incarceration  
Close the unfair trials of the eternally guilty seasons  
And forget about the found tails of hidden ended reasons  
Hope awakens when a perfect circle is forever born  
Sharing an innocent vessel of life to call our own  
Energy impulses to scream these new songs  
Of when the creation of heaven is undone
